Information and specifications outlined in this manual in effect at the time of printing of this manual. ECR International reserves the right to discontinue, change specifications or system design at any time without notice and without incurring any obligation, whatsoever.
1 - INTRODUCTION

1.1 Designated Use
- Hot water heating boiler.
- Indoor installation.
- Closet or alcove installation.
- Direct vent boiler.
- For use with natural gas or liquefied petroleum gases (LP/propane).

1.2 The unit MUST NOT:
- Directly heat potable water. Indirect heating is acceptable.
- Heat water with non-hydronic heating system chemicals present (example, swimming pool water).
- Exceed 50 psig (344 kPa) system pressure.
- Exceed 195°F (90.5°C) system design temperature.

1.3 Operational Features
- Modulating: 20-100%.
- Integral Dual Limit.
- Integral Low Water Cutoff (with test button).
- Outdoor Temperature Reset.
- Integral Multiple Boiler Control.
2 - IMPORTANT SAFETY INFORMATION

2.1 General
Boiler installation shall be completed by qualified agency. See glossary for additional information.

⚠️ WARNING
Fire, explosion, asphyxiation and electrical shock hazard. Improper installation could result in death or serious injury. Read this manual and understand all requirements before beginning installation.

2.2 Become familiar with symbols identifying potential hazards.

⚠️ CAUTION
 Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

⚠️ NOTICE
 Used to address practices not related to personal injury.

2.3 Installation shall conform to requirements of authority having jurisdiction or in absence of such requirements:
- National Electrical Code, NFPA 70.

2.4 Where required by authority having jurisdiction, installation shall conform to Standard for Controls and Safety Devices for Automatically Fired Boilers, ANSI/ASME CSD-1. Additional manual reset low water cutoff may be required.

2.5 Requirements for Commonwealth of Massachusetts:
Boiler installation must conform to Commonwealth of Massachusetts code 248 CMR which includes but is not limited to:
- Installation by licensed plumber or gas fitter.
3.1 Component Listing

1. **User Interface** (see Appendix A) - Displays information regarding boiler condition. Allows adjustment of boiler operating parameters. NOTE: Does not replace thermostat used to control central heating space.

2. **Combustion Air Inlet (2"/3")** (see page 7 & 8)

3. **Return Water From Heating System (In)** (see page 8) - Connection supplied at bottom of boiler.

4. **Low Voltage Terminal Strip** (see page 8) - Connection of all low voltage wiring, including thermostat. See section 8.

5. **Igniter** (see page 8)

6. **Flame Sensor** (see page 8)

7. **Sight Glass** (see page 8) - Permits observation of burner flame.

8. **Burner** (see page 35)

9. **Combustion Chamber** (see page 8)

10. **Condensate Collector** (see page 8)

11. **Return Temperature Sensor** (not shown)

12. **Drain Valve** (see page 12)

13. **Heat Exchanger Ball Valve** (see page 8)

14. **Supply Water Outlet to Heating System (Out)** (see pages 8) - Connections supplied for connecting from bottom of boiler. See section 5.

15. **Vent Temperature Sensor** (see page 8)

16. **Condensate Drain** (see page 8) - Boiler produces a liquid (condensate) as a by-product of combustion. Condensate must be piped to appropriate drain. See section 6.

17. **Heat Exchanger Pump** (see page 8)

18. **Gas Shutoff Valve** (see page 8) - Fuel supply isolation during servicing. See section 7

19. **Combustion Air Blower** (see page 8) - Delivers proper quantity of combustion air, receives fuel from gas valve, mixes air and fuel sending mixture to burner for combustion.

20. **Gas (Control) Valve** (see page 8) - Delivers proper quantity of fuel to Combustion Air Blower. See section 7.

21. **High Temperature Supply Switch** (see page 8)

22. **Low Water Cutoff** (see page 8) - Senses inadequate quantity of water. Turns off boiler before damage can occur.

23. **Safety Relief Valve** (see pages 7 & 8) - Factory supplied, Field installed. See section 5.

24. **High Voltage Junction Box** (see page 8) - For connection of 120V components. See section 8.

25. **Vent Connector** (see pages 7 & 8) - See section 6.

26. **Gas Connection** (see page 8) - See section 7.

27. **Wall Hanging Support Bracket** (see page 7) - Integral to boiler. Allows wall mounting when used with supplied wall mounting bracket. See section 4.

28. **Power Switch** (see page 7)

29. **Air Vent** (see page 7 & 8)

30. **Control Module** (see page 8)

31. **Lower Jacket Panel** (see page 7) - Gently pull upward then forward to access.

32. **Transformer** (see page 8) - Supplies 24V power to low water cutoff.

33. **Pressure Test Port** - (see page 8)

34. **Combustion Analysis Test Port** - (see page 8)

35. **Return Water Sensor** (see page 8)

36. **User Interface** - (see page 7)
3 - COMPONENT LISTING

Lift Jacket up, engage jacket with chassis push down.
4 - LOCATING BOILER

4.1 Boiler Location Considerations

- Ambient room temperature always above 32°F (0°C) to prevent freezing of liquid condensate.
- Approved for installation in closets.
- Protect gas ignition system components from water (dripping, spraying, rain, etc.) during operation and service (circulator replacement, condensate trap, control replacement, etc.).
- Wall mounting.
  - Wall must be plumb and capable of supporting boiler weight plus 60 lbs (28 kg). See Table 1.
  - Wall mounting. See section 4.2.
- Access to outdoors to meet minimum and maximum pipe lengths for combustion air and vent piping. See section 6.
- Disposal of condensate. See section 6.
- Drainage of water (or water - antifreeze solution) during boiler service or from safety relief valve discharge. See section 5.
- Access to system water piping, gas supply, and electrical service. See sections 5, 7 and 8.
- Clearances to combustible materials and service clearances. See Table 2 and figure 4-1.
- Multiple Boilers can be wall mounted, placed side by side, or back to back.

![FIGURE 4-1 Clearance to Combustible Materials](image)

(1) Required distances measured from boiler.
(2) Service, proper operation clearance recommendation.
4 - LOCATING BOILER

4.2 Prepipe supply and return water connections with factory fittings before wall mounting.

4.3 Wall Mounting
Mount boiler on wall using wall mounting bracket included with unit.
- Structure must be capable of supporting boiler weight plus 60 lbs (28 kg). See Table 1, page 2.
- Wall mount bracket has 4 slots allowing mounting on two (2) wall studs spaced at 11½" to 16½" on center. See figure 4-2.
- Boiler includes (4) 3/8" x 3" lag screws and (4) washers for attaching wall mount bracket to wood studs. Field source appropriate fasteners for other wall constructions (masonry, concrete).
- Attach wall mount bracket level on wall.
- Boiler must engage with wall mount bracket.
- Avoid overhang on sides of wall mount bracket. Verify boiler bracket is centered on wall bracket. See figure 4-2.

⚠️ CAUTION
Boiler weight exceeds 75 pounds (34 kg). Do not lift boiler onto wall without assistance.
5.1 General

- Install piping in accordance with authority having jurisdiction.

**NOTICE**

Use two (2) wrenches when tightening and fitting to pipe boiler’s threaded fittings. Boiler’s internal piping can be damaged if subjected to excessive torque.

- Support system piping and safety relief valve discharge piping. Boiler’s internal piping and wall mount bracket can be damaged if subjected to excessive weight.
- Size central heating pump (and domestic hot water pump, if used) for system requirements only. Heat exchanger pump compensates for pressure drop through boiler internal piping and heat exchanger.
- Thoroughly clean and flush system before connecting to boiler.

5.2 Special Conditions

- System piping exposed to freezing conditions: Use inhibited proplyene glycol solutions certified by fluid manufacturer for use with closed water heating system. Do not use automotive or ethylene glycol.
- Boiler installed above radiation level (or as required by authority having jurisdiction). Integral low water cutoff provided in boiler. See page 6.
- Boiler used in connection with refrigeration system. Install piping in parallel with boiler, with appropriate valves to prevent chilled medium from entering boiler.
- System piping connected to heating coils located in air handling unit exposed to refrigerated air circulation. Install flow control valves or other automatic means to prevent gravity circulation of boiler water during cooling cycle.

5.3 Safety Relief Valve and Air Vent

**NOTICE**

Boiler rated at 50 psig (345 kPa) maximum allowable working pressure. Boiler provided with 30 psig (206 kPa) safety relief valve. Field source safety relief valve for system pressures greater than 30 psig (206 kPa). Temperature Pressure Gauge and Air Vent satisfactory for 30-50 psig (206-345 kPa) operation.

- Install safety relief valve and air vent using pipe fittings provided with boiler. See figure 5-1
- Install safety relief valve with spindle in vertical position.
- Do not install shutoff valve between boiler and safety relief valve.

**WARNING**

- Poison hazard. Ethylene glycol is toxic. Do not use ethylene glycol.
- Never use automotive or standard glycol antifreeze, even ethylene glycol made for hydronic systems.
- Ethylene glycol can attack gaskets and seals used in hydronic systems.
- Use only inhibited proplyene glycol solutions certified by fluid manufacturer as acceptable for use with closed water heating system.
- Thoroughly clean and flush any system that used glycol before installing new Boiler.
- Provide user with Material Safety Data Sheet (MSDS) on fluid used.

FIGURE 5-1 Safety Relief Valve & Air Vent (View from front of boiler)

Position Air Vent and Safety Relief Valve to provide space for discharge piping.
5 - HYDRONIC PIPING

5.4 Trim Piping

- Temperature - Pressure Gauge. Install temperature pressure gauge using nipple, tee and bushing provided with boiler. See figure 5-3.
- Drain Valve. Install drain valve using nipple, tee and bushing provided with boiler. See figure 5-3.

5.5 System Piping

- Systems with automatic fill valves require back flow prevention device.
- Single boiler system. See figures 5-4, 5-5, 5-6, 5-7 for general guidance. Additional considerations:
  - Control system designed for single central heating pump. Installer responsible for integration of multiple central heating pumps.
  - Control system allows domestic hot water prioritization. Function could be lost if central heating pump not directly connected to control system.
- Multiple boiler system. See figure 5-8 for general guidance. Additional considerations:
  - Control system requires equivalent water temperatures entering each boiler to properly sequence and adjust system supply temperature.
  - Install multi boiler sensor kit. See "Parts, Kits & Optional Accessories" manual for part number.
5 - HYDRONIC PIPING

NOTICE
Illustrations are meant to show system piping concept only. Installer responsible for all equipment and detailing required by authority having jurisdiction.

FIGURE 5-4 System Piping

6 - COMBUSTION AIR AND VENT PIPING

6.1 General
This boiler requires a dedicated direct vent system. Install combustion air and vent piping in accordance with these instructions, authority having jurisdiction, and National Fuel Gas Code, ANSI Z223.1/NFPA 54.
Vent connections serving appliances vented by natural draft shall not be connected into any portion of mechanical draft systems operating under positive pressure.
Install vent system in accordance with these instructions.

6.2 Removal of Existing Boiler From Common Vent System
When existing boiler is removed from common venting system, common venting system is likely to be too large for proper venting of appliances remaining connected to it.
After removal of existing boiler, following steps shall be followed with each appliance remaining connected to common venting system placed in operation, while other appliances remaining connected to common venting system are not in operation:
• Seal any unused openings in common venting system.
• Visually inspect venting system for proper size and horizontal pitch. Determine there is no blockage or restrictions, leakage, corrosion and other deficiencies which could cause an unsafe condition.
• When practical, close all building doors, windows, and all doors between space in which appliances remaining connected to common venting system are located and other spaces of building. Turn on clothes dryer and any appliance not connected to common venting system. Turn on exhaust fans, such as range hoods and bathroom exhaust so they will operate at maximum speed.
Do not operate summer exhaust fan. Close fireplace dampers.
• Turn on appliance being inspected. Follow lighting instructions. Adjust thermostat so appliances will operate continuously.
• Test for spillage at draft hood relief opening after 5 minutes of main burner operation. Use flame of match or candle, smoke from cigarette, cigar or pipe.
• Determine each appliance remaining connected to common venting system properly vents when tested as outlined above. Then return doors, windows, exhaust fans and any other gas-burning appliance to their previous condition of use.

6.3 Materials
• See Table 3

| Table 3 - Combustion air and vent pipe fittings must conform with the following: |
|---------------------------------|------------------|---------------------|
| Item                           | Material         | Standards           |
| Vent Pipe and Fittings         |                  |                     |

• IPEX is approved vent manufacturer in Canada listed to ULC-S636.
• IPEX System 636 Cements and Primers are approved in Canada listed to ULC-S636.

DO NOT USE CELLULAR (FOAM) CORE PIPE

⚠️ WARNING
Use of cellular core PVC for venting flue gas could result in death, serious injury.
6 - COMBUSTION AIR AND VENT PIPING

6.4 Pipe Installation
- Minimum and maximum combustion air and vent pipe lengths listed in Table (4). Pipe length counted from combustion air connector to termination.
- Install field-sourced 2" to 3" transition, if used, in vertical section at combustion air inlet and vent connector.
- 90° elbows equivalent to 5.0 ft (1.6 m). 45° elbows equivalent to 3.5 ft (1.1 m). 2" to 3" transition has no equivalent length.
- Slope vent pipes minimum 1/4" per foot (21 mm/m) back toward boiler. Support horizontal sections to prevent sags capable of accumulating condensate.
- Support piping in accordance with pipe manufacturer’s instruction and authority having jurisdiction. In absence of manufacturer’s instruction use pipe hooks, pipe straps, brackets, or hangers of adequate and strength located at intervals of 4 ft (1.2m) or less. Allow for expansion/contraction of pipe.
- Combustion air and vent piping must be air tight and water tight.
- Certified vent system components must NOT be interchanged with other vent systems or unlisted pipe/fitting.

6.5 Termination
- Terminate combustion air and vent pipes with fittings or concentric vent kit.
- See "Parts, Kits and Optional Accessories" manual for concentric vent kit part numbers.
- Use horizontal pipe for vent and 90° elbow for combustion air termination when using fittings.
- Terminate combustion air and vent pipes in same atmospheric pressure zone through exterior sidewall or roof.
- Locate combustion air termination as far as possible from swimming pool, swimming pool pump house, and other sources of airborne chlorine.
- Locate combustion air and vent terminals as required by authority having jurisdiction.

⚠️ WARNING
Vent extending through exterior wall shall not terminate adjacent to wall or below building extensions such as eaves, balconies, parapets or decks. Failure to comply could result in death or serious injury.

### Table 4 - Combustion Air and Vent Piping Length

<table>
<thead>
<tr>
<th>Model</th>
<th>2&quot; Pipe</th>
<th>3&quot; Pipe</th>

<td></td>
<td>050</td>
<td>075/100</td>
</tr>
<tr>
<td>Min.</td>
<td>6 ft. (1.8 m)</td>
<td>6 ft. (1.8 m)</td>
</tr>
<tr>
<td>Max.</td>
<td>100 ft. (30.5 m)</td>
<td>50 ft. (15.2 m)</td>
</tr>
</tbody>
</table>

1 - 90° elbow = 5 ft (1.6 m)
1 - 45° elbow = 3.5 ft (1.1 m)
1 - 2" x 3" adapter = 0 ft (0 m)

Note: Concentric Vent Kit=5 ft (1.6m) equivalent length

For Example: Boiler can be installed on outside wall and vented with 1-90° elbow and 1 ft (0.30 m) of vent pipe.
6 - COMBUSTION AIR AND VENT PIPING

**FIGURE 6-1**

- **Combustion Air**
  - 3" (8 cm) Maximum separation between combustion air intake and vent of same appliance.
  - 8" (21 cm) Minimum vertical separation between combustion air intake and vent of different appliances.
  - 15" (38 cm) Maximum horizontal length of vent.
  - Maximum vent/intake between different appliances 12" (30 cm).
  - Maximum allowable total vertical vent length with outside exposure is 10 ft. (3.05m).
  - Abandoned unused masonry chimney may be used as chaseway for combustion air and vent. Both combustion air and vent pipe must exit above top of chimney with clearances as shown in Figure 6-1.

- **Roof Terminations**
  - 3" (8 cm) Maximum horizontal separation between combustion air intake and vent of same appliance.
  - 8" (21 cm) Minimum vertical separation between combustion air intake and vent of different appliances.
  - 15" (38 cm) Maximum horizontal length of vent.
  - Maximum vent/intake between different appliances 12" (30 cm).
  - Maximum allowable total vertical vent length with outside exposure is 10 ft. (3.05m).
  - Abandoned unused masonry chimney may be used as chaseway for combustion air and vent. Both combustion air and vent pipe must exit above top of chimney with clearances as shown in Figure 6-1.

**FIGURE 6-2**

- 12" (30 cm) Minimum above anticipated snow line
- 3" (8 cm) Maximum separation
- 12" (30 cm) Separation between bottom of combustion air intake and bottom of vent

**FIGURE 6-3**

- 12" (30cm) Minimum separation
- See snow & ice page 23

**Side Wall Terminations**

- 3" (8 cm) Minimum horizontal separation between combustion air intake and vent terminations.
- 8" (21 cm) Minimum vertical separation between combustion air intake and vent terminations.
- 12" (30 cm) Separation between bottom of combustion air intake and bottom of vent.
- Multiple terminations as shown in 6-1, 6-2, and 6-3 must be a minimum of 12" (30 cm) horizontally between vent of one termination and air intake of next appliance.
- Maximum allowable total outside exposure vent length equals 10 ft. (3.05m).
- Maintain a pitch of 1/2" per ft. (42mm/m) outside exposure back to boiler to ensure proper condensate drainage for horizontal runs.
FIGURE 6-4

Combustion Air

Vent

1" (2.54cm) Maximum

FIGURE 6-5

Combustion Air

Vent

1" (2.54cm) Maximum

Roof overhang

12" (30cm) Minimum

* See Note Below

12" (30cm) Minimum

36" (0.9m) Minimum

Maintain 12" (30cm) clearance above highest anticipated snow level or grade

*Must be less than 4" or greater than 24" Horizontal distance between end bells of each air intake to prevent flue gas recirculation.

FIGURE 6-7

Combustion Air

Elbow field supplied

OD 3½" (8.9cm) - *2" (5.0cm) kit
OD 4½" (11.4cm) - 3" (7.6cm) kit

*2 or 3" (5.0 or 7.6cm) Diameter PVC intake/combustion air

**See Note

*2" (5.0cm) Diameter = 41" Length (1.0m))
3" (7.6cm) Diameter = 47" Length (1.2m)

Note: Securing strap must be field installed to prevent movement of termination kit in side wall

** Note Overall length may be modified by cutting or extending both combustion air and vent pipes. 12" is minimum allowable length and 60" is maximum allowable length for this dimension. SDR-26 PVC (D2241) only may be used for extending pipes. Do not use Schedule 40 PVC or use couplings to extend pipes. Dimension will change if intake/vent pipes are lengthened or shortened.

* Note: 2" For use with models 050/075/100.
3" For use with models 075/100/150/200

- **Roof boot/flashing (field supplied)**
- **Support (field supplied)**
- **Maintain 12"(30cm) clearance above highest anticipated snow level 24" above roof**
- **Note: Support must be field installed to secure termination kit to structure**
**6 - COMBUSTION AIR AND VENT PIPING**

<table>
<thead>
<tr>
<th><strong>Doors &amp; Windows</strong></th>
<th>Combustion air and vent termination must be 12&quot; (300 mm) from or below doors, windows or gravity inlet.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Condensate</strong></td>
<td>Vent gas may condense, forming moisture, may be corrosive. Protect building materials at vent from exhaust of vent gas.</td>
</tr>
<tr>
<td><strong>Forced Air Inlet</strong></td>
<td>Terminate venting system 3' (0.9 m) above and 10' (3.0 m) from any forced air inlet (except boiler’s combustion air inlet).</td>
</tr>
<tr>
<td><strong>Grade, Snow &amp; Ice</strong></td>
<td>Terminate vent system bottom, minimum 12&quot; (300 mm) above highest anticipated snow level. Avoid locations where snow may drift and block vent and combustion air. Ice or snow may cause boiler to shut down if vent or combustion air becomes obstructed.</td>
</tr>
<tr>
<td><strong>&quot;L&quot; Corner</strong></td>
<td>Vent termination shall NOT be installed closer than 3' (0.9 m) from inside corner of “L” shaped structure.</td>
</tr>
</tbody>
</table>
6 - COMBUSTION AIR AND VENT PIPING

**Vegetation, Plants & Shrubs**
Keep vent termination 3’ minimum (0.9m) away from vegetation. Position termination where vent vapors will not damage plants/shrubs or air conditioning equipment.

**Meters, Regulators, deck, porch**
Vent termination 4’ (1.2 m), horizontally from, no case above or below, electric meters, gas meters, regulators, and relief equipment, or under deck or porch.

**Walkways**
Locate vent termination minimum 7' (2.1 m) above any public walkway, with consideration to condensate.

**People or Pets**
Locate combustion air and vent termination to prevent accidental contact with people or pets.

**Stones, Balls, Etc.**
Position combustion air and vent termination where it will NOT be damaged by foreign objects, such as stones, balls, etc.

**Vapors**
Position termination where vent vapors are not objectionable.

**Eddy, Flue Gases**
Position termination so it will not be effected by wind eddy, air born leaves, snow, or recirculated vent gases. Give consideration to excessive wind and locate away from windward side of building.

**Multiple Family Dwellings**
Vent shall not terminate directly above paved sidewalk or paved driveway located between two single-family dwellings serving both dwellings.
6.6 Condensate Piping

- Use materials acceptable to authority having jurisdiction. In absence of such authority:
  - PVC or CPVC per ASTM D1785/D2845 Cement or primer per ASME D2564 or F493.
  - Attach PVC tee provided with boiler and field sourced piping to condensate drain at bottom of boiler. See Figure 6-1.
- Slope condensate drain pipe minimum 1/4” per foot (21mm/m) away from boiler.
- Use field source condensate pump if boiler located below disposal point.
- Field source condensate neutralizing kit as required by authority having jurisdiction or for environmentally friendly condensate disposal.
7 - GAS SUPPLY PIPING

7-1 Gas Connection

- Use piping materials and joining methods acceptable to authority having jurisdiction. In absence of such requirements National Fuel Gas Code, ANSI Z223.1/ NFPA 54.
- Size and install gas piping system to provide sufficient gas supply to meet maximum input at not less than minimum supply pressure. See Table 5.
- Support piping with hooks, straps, bands, brackets, hangers, or building structure components to prevent or dampen excessive vibrations and prevent strain on gas connection. Boiler will not support piping weight.
- Use thread (joint) compound (pipe dope) suitable for liquefied petroleum gas.
- Provide sediment trap up stream of gas valve.
- Install manual main shutoff valve outside of jacket. See figure 7-2.

7.2 Conversion Kit Instructions

- See Gas Conversion Kit Instructions included with Boiler.

</tbody>
</table>

Note: See Glossary - Piping Table 16

---

**CAUTION**

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

**NOTICE**

Use two (2) wrenches when tightening and fitting to pipe boiler's threaded fittings. Boiler's internal piping can be damaged if subjected to excessive torque.
7 - GAS SUPPLY PIPING

7.3 Leak Check Gas Piping
Pressure test boiler and gas connection before placing boiler in operation.

- Pressure test over 1/2 psig (3.5 kPa). Disconnect boiler and its individual gas shutoff valve from gas supply system.
- Pressure test at 1/2 psig (3.5 kPa) or less. Isolate boiler from gas supply system by closing manual gas shutoff valve. See figure 7-3.
- Locate leakage using gas detector, noncorrosive detection fluid, or other leak detection method acceptable to authority having jurisdiction. Do not use matches, candles, open flames, or other methods providing ignition source.
- Correct leaks immediately and retest.

DANGER
Fire Hazard. Do not use matches, candles, open flames, or other methods providing ignition source. Failure to comply will result in death or serious injury.

7-3 Gas Shutoff Valve

7-2 Manual Main Gas Shutoff Valve Outside Boiler Jacket
8 - ELECTRICAL CONNECTIONS

8.1 General
Electrically bond boiler to ground in accordance with requirements of authority having jurisdiction. Refer to National Electrical Code, ANSI/NFPA 70.

8.2 Electric Knockouts (Figure 8-1)
• Five knockouts located on bottom of chassis.
  A. Three knockouts located under junction box are reserved for high voltage wires. Choose connectors using total diameter of wire bundles.
  B. Two knockouts located to right of high voltage knockouts (outside of junction box) are reserved for low voltage wiring. Use supplied grommets when using these knockouts.

8.3 Line Voltage Connections (Figure 8-2)
• Boiler
  A. Provide individual 120V, 15 amp circuit (recommended) with fused disconnect or service switch as required by authority having jurisdiction.
  B. Open High Voltage Junction Box (see Figure 3-4) to access line voltage terminal strip.
  C. Connect 120 VAC circuit to line voltage terminal strip 120 VAC L,N,G.

• Central Heating Pump, if used.
  A. Isolate pump from control module if pump FLA (Full Load Amps) exceeds 2 amps (or 1 amp if external DHW pump is used).
  B. Connect pump to line voltage terminal strip CH PUMP L,N,G.

• Domestic Hot Water Pump, if used.
  A. Isolate pump from control module if pump FLA exceeds 1.0 amp.
  B. Connect pump to line voltage terminal strip DHW PUMP L,N,G.

8.4 External Connections (Figure 8-3)
• User Interface Terminals
  A. Factory wired to USER INTERFACE terminals
  B. Optional - Remote mount user interface for improved access. Use low voltage knockout.
  C. Maximum wire length is 100 ft (30m) for 22 ga. wire, or 150 ft (45m) for 18 ga. wire.
8 - ELECTRICAL CONNECTIONS

- **Argus Link (Multiple boiler applications only)**
- **Outdoor Sensor, if used.**
  A. Provided with boiler.
  B. Locate outdoor sensor to protect against wind and direct sunlight. Mounting instructions provided with sensor.
  C. Maximum wire length is 100 ft (30m) for 22 ga. wire, or 150 ft (45m) for 18 ga. wire.
  D. Connect wires to OUTDOOR SENSOR terminals. Wires are interchangeable.

- **System Sensor (Multiple boiler applications only)**

- **Domestic Hot Water (DHW) Thermostat, if used.**
  A. Use temperature control with dry contacts rated at 0.5 amps @ 120 VAC. Boiler control does not provide power to DHW temperature control.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>IMPORTANT: Do not apply power to DHW T-T terminals. Dry contact only, use of isolation relay may be necessary.</td>
</tr>
</tbody>
</table>

B. Maximum wire length is 330 ft (100 m) 22 gauge wire.
C. Connect wires (interchangeable) to DHW T-T terminals. Wires are interchangeable.

- **Central Heating Thermostat**
  A. Use thermostat or boiler system control with dry contacts related 0.5 amps @ 120 VAC. Boiler control does not provide 24 VAC power to central heating thermostat.
  B. Locate and install thermostat per manufacturer's instructions. Maximum wire length is 330 ft (100 m) for 22 ga. wire.
  C. Connect wires to CH T-T terminals. Wires are interchangeable.
9 - START UP PROCEDURE

9.1 Fill boiler with water and purge air
- Fill boiler with potable water.
- Fill boiler and system piping with water (or antifreeze-water solution, if used). See antifreeze information page 11. Purge air from boiler using air vent. Purge air from system piping.
- Inspect system piping and boiler connections. Repair any leaks immediately.

9.2 Fill Condensate Trap with Water
- Disconnect collet clip from condensate hose barb. See figure 9-1.
- Disconnect tubing below from hose barb.
- Pour approximately 2 cups (473 ml) of water into condensate drain.
- Reconnect tubing to hose barb with collet clip. See Figure 9-1.

1. Disconnect collet clip from hose barb and fill Condensate trap with water.

2. Reconnect hose to hose barb with collet clip before starting boiler.
9 - START UP PROCEDURE

* List parameters in event of Control Module Failure to reprogram your settings.
9 - START UP PROCEDURE

9.4 Boiler Start-up and Operational Test

1. Verify air is purged from hydronic piping.
2. System test pumps - verify each pump is operational.
3. Verify gas piping
   - Confirm pressure test. See section 7.3.
   - Visually inspect piping to determine there are no open fittings or ends, and all valves at unused outlets are closed and plugged/capped.
   - Purge air from piping
   - Check piping and connections for leaks immediately after gas is turned on. Shut off gas supply and make necessary repairs if leaks found.
4. Follow OPERATING INSTRUCTIONS to initiate boiler operation. See section 10.
5. Inspect combustion air and vent piping. Verify pipe is not leaking and terminations are unobstructed and vent gas discharge is not a nuisance or hazard.
6. Verify boiler functions.
7. Inspect condensate disposal system. Verify condensate flows adequately and is disposed properly.
8. Check control module operation.
9. Check field-sourced limits, low water cutoffs, etc. per manufacturer's instructions.

9.5 Check Combustion

Natural Gas

1. Measure input. English units*
   - Turn off gas to all other appliances.
   - Use ½, 1 or 2 cu ft dial on gas meter. Measure time required for one or more complete revolutions. Measure time for 1-2 minutes.
   - Calculate input.

   \[
   \text{Input (MBH)} = \frac{3600 \times \text{cu ft}}{\text{seconds}}
   \]

   Example: Gas flow from
   Meter = 2 cu ft
   Measured time = 72 seconds

   Rate (MBH) = \frac{3600 \times 2 \text{ cu ft}}{72 \text{ seconds}} = 100 \text{ MBH}

*Metric - See Glossary

** Most propane systems do not have gas flow meters.

2. Compare measured input to table. Adjust input rate if needed using figure 9-3 below.

<table>
<thead>
<tr>
<th>Size</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>050</td>
<td>45</td>
<td>51</td>
</tr>
<tr>
<td>075</td>
<td>65</td>
<td>76</td>
</tr>
<tr>
<td>100</td>
<td>90</td>
<td>102</td>
</tr>
<tr>
<td>150</td>
<td>140</td>
<td>153</td>
</tr>
<tr>
<td>200</td>
<td>185</td>
<td>204</td>
</tr>
</tbody>
</table>

Natural Gas and Propane

3. Measure CO₂ and compare to table. Adjust CO₂ if needed using figure 9-3 below. See figure 9-4 for combustion air analyzer port.

<table>
<thead>
<tr>
<th>Gas</th>
<th>CO₂</th>
<th>CO</th>
</tr>
</thead>
<tbody>
<tr>
<td>Min.</td>
<td>Max.</td>
<td></td>
</tr>
<tr>
<td>Natural</td>
<td>8.5</td>
<td>9.5</td>
</tr>
<tr>
<td>Propane</td>
<td>10.0</td>
<td>11.0</td>
</tr>
</tbody>
</table>

** Notice

Contact Technical Support @ 800-325-5479 for additional information or assistance.

Natural Gas only**

4. Measure input. Compare to table above. Continue to measure input and CO₂ until both measured values are within range specified in tables.

Propane Gas

Most propane systems do not have flow meters.

1. Check CO₂. Propane should be between 10% and 11.0%.
   - If CO₂ is low increase gas flow following figure 9-3.
   - If CO₂ is high decrease gas flow following figure 9-3.

To increase gas flow turn 'throttle' left or counter clockwise.
To decrease gas flow turn 'throttle' right or clockwise.
Limit adjustment to one turn and retest.
9 - START UP PROCEDURE

**NOTICE**
Combustion analyzer port is provided. After use replace cover.

9-4 Combustion Analyzer Port

Verify Burner, Proper Operation

1. Inspect burner flame through Sight Glass. See figure 9-5.
2. Operate boiler through several heating cycles, including domestic hot water, if used. Verify proper operation.
3. Reset control parameters to operating settings if adjusted to allow startup and operation test.
4. Follow instructions TO TURN OFF GAS TO APPLIANCE if boiler is not being placed into immediate operation.
5. Enter installer information on Warranty Registration Card.
6. Gather all instructions, manuals, wiring diagrams, warranty registration card and other supporting information. Review with user and/or affix in conspicuous location adjacent to boiler.

**WARNING**
Asphyxiation hazard. Carbon monoxide is odorless, tasteless, clear colorless gas, which is highly toxic. Verify cap is firmly placed on combustion analyzer port to prevent CO emission.

9-5 Burner Flame

Look for BLUE flame with slight YELLOW tips evenly spaced around burner
10 - OPERATING INSTRUCTIONS

FOR YOUR SAFETY READ BEFORE OPERATING

WARNING

If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- This appliance is equipped with an ignition device which automatically lights burner. **Do NOT try to light this burner by hand.**
- Before operating smell all around appliance area for gas. Be sure to smell next to floor because some gas is heavier than air and will settle to the floor.
- **Use only your hand to turn the gas shutoff valve.** Never use tools. If valve will not turn by hand, do not try to repair it, call a qualified service technician. Force or attempted repair may result in fire or explosion.
- **Do not use this appliance if any part has been under water.** Immediately call a qualified service technician to inspect appliance and to replace any part of control system and any gas control which has been under water.

10.1 OPERATING INSTRUCTIONS

**Stop! Read Safety information above.**

- Set thermostat to lowest setting.
- **Turn "OFF" all electrical power to appliance.**
- This appliance is equipped with an ignition device which automatically lights the burner. **Do not try to light burner by hand!**
- Remove upper jacket panel.
- Turn gas shutoff valve clockwise to closed position. Handle should be perpendicular to gas pipe.
- Wait 5 minutes for any gas to clear. Smell for gas, including near floor. If you smell gas, **STOP!** Follow instructions on this page: “**What To Do If You Smell Gas.**” If you do not smell gas, go to next step.
- Turn gas shutoff valve counter clockwise to the open position. Handle should be parallel to gas pipe.
- Replace upper jacket panel.
- Turn "ON" electrical power to appliance.
- Set thermostat to desired setting.
- If the appliance will not operate, follow instructions TO **TURN OFF GAS TO APPLIANCE** and call your service technician or gas supplier.

10.2 TO TURN OFF GAS TO APPLIANCE

- Set thermostat to lowest setting.
- **Turn "OFF" all electric power to appliance if service is to be performed.**
- Remove front jacket panel.
- Turn gas shutoff valve handle clockwise to closed position. Handle should be perpendicular to gas pipe.
- Replace front jacket panel.

---

**CAUTION**

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.
Before servicing, turn off electrical power to boiler at service switch. Close manual gas valve to turn gas supply OFF to boiler. Failure to comply will result in death or serious injury.

Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

Verify proper operation after servicing.

Perform regular service and maintenance by qualified service agency at least once every 12 months to assure safe, trouble free operation and maximum efficiency.

11.1 Beginning of Each Heating Season

- Check boiler area is free from combustible materials, gasoline, and other flammable vapors and liquids.
- Visually inspect combustion air and vent piping for proper operation. Check for and remove any obstruction to flow of combustion air or vent gases. Immediately repair or replace pipe showing deterioration or leakage. Reassemble per instructions in section 6. Verify proper reassembly and resealing of system.
- Visually inspect condensate drain line for proper operation. Checking for deteriorated or plugged condensate drain line. Verify condensate trap drains freely.
- Test safety relief valve for proper operation. Refer to valve manufacturer's instructions packaged with relief valve.
- Examine flue passages in heat exchanger, burner, condensate lines, and cleaning (if necessary) by following instructions in "Annual Examination and Cleaning of Boiler Components" in this section.
- Circulator pump and combustion air blower motor furnished with boiler are permanently lubricated from factory and require no further lubrication. Lubricate field sourced pumps and/or motors according to pump and/or motor manufacturer's instruction.
- Check following components are operating properly and are free of blockages or obstructions:
  - air vent;
  - check venturi air inlet for blockage and clean as required;
  - verify pressure test port cap and combustion test port are in place;
  - return temperature sensor clip must be securely seated on pipe; Check boiler for any sign of leaks.
- Check low water cutoff using user interface.
  - Check operation by pressing test button on low water cutoff.
    - "Low Water" LED should illuminate and burner should shut down.
    - Should get error message on User Interface (E36).
  - Every 5 years remove low water cutoff. Reinstall after cleaning.
  - Every 10 years replace low water cutoff.
- Check flame signal with user interface. Should be 8 micro amps at 100%.
- Visual inspection of flame through sight glass. Burner should be fully illuminated. See figure 9-5.
- Check expansion tank.
11.2 Annual shut down procedure
- Follow instructions “To Turn Off Gas To Appliance” unless boiler is also used to supply domestic hot water. See section 10.
- Drain system completely if system does not have antifreeze when heating system is to remain out of service during freezing weather.
- Drain condensate lines when boiler is to be exposed to freezing temperatures.

**WARNING**
Following service procedures must be performed by qualified service agent. Boiler owner shall not attempt these steps. Failure to do so could result in death or serious injury.

11.3 Annual Examination and Cleaning of Boiler Components
- Obtain Burner Inspection Kit.
- Follow instruction 'To Turn Off Gas to Appliance'. Verify all electrical power to boiler is turned off.
- Turn OFF manual main gas shutoff valve external to boiler.
- Visually inspect through sight glass verify no flame is present.
- Disconnect flexible gas line from gas shutoff valve. See Figure 10-1.
- Examine flue passages by removing blower/burner assembly from heat exchanger.
  - Confirm manual gas valve is closed.
  - Remove retaining screw and disconnect gas valve wire harness from gas valve.
  - Disconnect high voltage lead from igniter.
  - Disconnect flame sensor and igniter wires.
  - Remove 2 screws and carefully remove igniter and gasket.
  - Remove 2 screws and carefully remove flame sensor.
  - Loosen and remove four nuts connecting fuel mixer assembly to heat exchanger.
  - Entire gas train can be moved aside. Take precaution to not kink flexible gas hose.
  - Remove gasket and burner. It may be necessary to unlatch both of the Heat Exchanger locking straps (if present).
  - Clean burner using air hose directed into top of burner opening. This will dislodge any debris build up in burner ports.

---

11 - GENERAL MAINTENANCE AND CLEANING

11-2 Condensate Collector

- Remove four nuts (3 nuts on 150/200) holding condensate collector from bottom of heat exchanger assembly. Also remove gasket.

- Clean heat exchanger with low pressure water spray. If this does not clean fins adequately, use flexible handle nylon brush to loosen sediment and oxide on all accessible heating surfaces of heat exchanger. Take care not to get brush stuck in heat exchanger.

- After brushing and rinsing, remove any remaining loosened sediment using shop vacuum with snorkel attachment. Inspect burner for foreign matter in flame ports or inside burner. Foreign matter should be removed by blowing with compressed air or vacuuming. If burner cannot be cleaned, it must be replaced.

- Reinstall refractory, burner holder, burner and replace gasket (in that order). Position fuel mixer assembly over studs. Install four nuts and tighten. Reinstall igniter and igniter gasket and fasten with two screws. Replace gasket and condensate collector to bottom of heat exchanger assembly. Replace and tighten four nuts holding collector to heat exchanger assembly.

- Connect igniter wires, and gas valve wires.

- Visually inspect condensate trap. Remove any foreign material visible in condensate lines as described below:
  - Inspect for sediment or blockage.
  - Flush out with water or vacuum.
  - Follow the instructions "Filling The Condensate Trap With Water" section 9.1.
  - Install jackets.

- Follow Boiler Start-up and Operational Test. See section 9.4.

\(^{(1)}\) 1000 Btu/hr (British Thermal Units Per Hour)
\(^{(2)}\) Heating Capacity and AFUE (Annual Fuel Utilization Efficiency) are based on DOE (Department of Energy) test procedures.
\(^{(3)}\) Net I=B=R Ratings based on piping and pickup allowance of 1.15. Contact Technical Support before selecting boiler for installations having unusual piping and pickup requirements, such as intermittent system operation, extensive piping systems, etc.

12.1 Ratings and Capacities

- Constructed and hydrostatically tested for maximum allowable working pressure of 50 psig (pounds per square inch gauge) (345 kPa) in accordance with ASME Boiler and Pressure Vessel Code, Section IV, Rules for Construction of Heating Boilers.

- Ratings used for elevations up to 2000 ft (600m) above sea level.

- For elevations above 2000 ft. (600m) Reduce input rate 4% for each 1000 ft (300m) above sea level.

Troubleshooting

**Blocking Error**

- Inspect burner through sight glass. Is flame present?
  - **YES**
    - Replace Control Module
  - **NO**
    - Turn Gas Shutoff Valve clockwise to closed position. Follow instructions TO TURN OFF GAS TO APPLIANCE. Replace Gas Valve.

**Lockout Alarm**

- Inspect harness connection Flame Sensor. Is connection clean and secure?
  - **YES**
    - Replace Flame Sensor or harness
  - **NO**
    - Replace Flame Sensor

**Operating Instructions**

- Follow OPERATING INSTRUCTIONS to initiate boiler operation. Enter Installer Menu, Boiler Status, Flame Signal. Is flame signal greater than 3.7 uA?
  - **YES**
    - Replace Control Module
  - **NO**
    - Replace Flame Sensor and Burner
Blocking Error E 3 6
Low Water Cutoff

Check Low Water Cutoff. Is amber lamp lit?

- **YES**
  - Repair System Piping, remove any remaining air in system and refill.
  - Is harness plugged into Control Module J16?
    - **YES**
      - Insert Harness
    - **NO**
      - Replace Low Water Cutoff

- **NO**
  - Check Low Water Cutoff. Is Green Power Lamp lit?
    - **YES**
      - Disconnect Blue/Yellow harness from Transformer. Using digital meter check for 24 Vac. Is 24 to 30 Vac present?
        - **YES**
          - Connect harness to Transformer. Disconnect harness from Low Water Cutoff. Is 24 Vac at terminals 1 & 2?
            - **YES**
              - Replace Low Water Cutoff
            - **NO**
              - Replace Harness
        - **NO**
          - Replace Main Harness
    - **NO**
      - Is Harness plugged into Low Water Cutoff?
        - **YES**
          - Replace Harness
        - **NO**
          - Replace Transformer

Is Blue/Yellow Harness plugged into 24 Vac Transformer?
Is Black/White Harness plugged into 24 volt harness?
46

13 - TROUBLE SHOOTING

- **Blocking Error**  E 4 0
  - **Return Temp**
    - Is correct harness connected to return sensor (2 Brown Wires)?
      - **YES**
      - **NO**

- **Is Heat Exchanger Pump oriented properly?** (Pump Arrow pointing down?)
  - **YES**
  - **NO**

- Disconnect harness from Return Water Sensor.
  - Measure resistance using digital ohm meter. Is resistance between 950 to 33,000 ohms?
    - **YES**
    - **NO**

- **Install Heat Exchanger Pump in proper orientation**

- **Correct wiring**

- **Replace Control Module**
- **Replace Return Water Sensor**

- **Blocking Error**  E 4 4
  - **Phase error**
    - Measure incoming power with volt meter. Is terminal 120 VAC (L) approximately 120 VAC? Is 120 VAC (N) approximately 0 VAC?
      - **YES**
      - **NO**

- **Correct field wiring**
- **Replace Control Module**
13 - TROUBLE SHOOTING

- Blocking Error  E 4 5
  Net frequency error

Is power supply between 59 and 61 Hz?

- YES
  - Provide frequency stabilized power supply rated at 60 Hz +/- 2%
  - Replace circuit breaker

- NO
  - Is field wiring loose or faulty?
    - YES
      - Correct wiring
    - NO
      - Replace Control Module

Is power supply circuit breaker loose or faulty?

- YES
  - Replace circuit breaker

- NO

14.1 Connection Diagram
14 - WIRING DIAGRAM

14.2 Schematic Diagram of Ladder Form
• **ANSI** - American National Standards Institute, Inc. oversees creation and maintenance of voluntary consensus standards, including ANSI Z21.13/CSA 4.9: Gas-Fired Low Pressure Steam and Hot Water Boilers.

• **ASTM** - American Society for Testing and Materials. ASTM International is one of largest voluntary standards development organizations in world trusted source for technical standards for materials, products, systems, and services. Known for their high technical quality and market relevancy, ASTM International standards have important role in information infrastructure that guides design, manufacturing and trade in the global economy.

• **AUTHORITY HAVING JURISDICTION** - Individual or organization adopting and enforcing codes, rules, and by-laws governing various concerns of community. Commonly referred to as “final authority” for any matters relating to LIFE SAFETY and BUILDING CONSTRUCTION within a community.

• **Btu** - Abbreviation for British Thermal Unit. Quantity of heat required to raise temperature of 1 pound of water 1°F.

• **BURNER** - Device for final conveyance of gas or mixture of gas and air, to combustion zone.

• **COMBUSTION** - Rapid oxidation of fuel gases accompanied by production of heat or heat and light. Complete combustion of fuel is possible only in presence of adequate supply of Oxygen.

• **COMBUSTIBLE MATERIAL** - Materials made of or surfaced with wood, compressed paper, plant fibers, or other materials capable of being ignited and burned. Such material shall be considered combustible even though flame-proofed, fire-retardant treated, or plastered.

• **CONDENSATE** - Liquid separated from flue gas due to reduction in temperature.

• **DIRECT VENT BOILER** - Boiler constructed and installed so all combustion air is derived directly from outdoors and all vent gases are discharged to outdoors.

• **DRAFT** - Pressure difference causes gases or air to flow through a chimney, vent, flue or appliance.

• **FLA** - Full load amps.

• **FLUE GASES** - Products of combustion plus excess air in appliance flues or heat exchanger.

• **GAS PIPE SIZES** - Table 16

</table>

• **HIGH-VOLTAGE** - Circuit involving potential of not more than 600 volts and having circuit characteristics in excess of those of low-voltage circuit.

• **IGNITER** - Device utilizing electrical energy to ignite gas at main burner.

• **LEAK CHECK** - Operation performed on gas piping system to verify system does not leak.

• **LOW WATER CUTOFF** - Device constructed to automatically cut off fuel supply when surface of water in boiler falls to lowest safe water level.

• **LOW-VOLTAGE** - Circuit involving potential of not more than 30 volts.

• **METRIC GAS METERS**

\[
\text{MBH} = \frac{127,116 \times \text{cu meters}}{\text{Seconds}}
\]

For example: Gas Meter measures 0.1 cubic Meters in 100 seconds

\[
\text{MBH} = \frac{127,116 \times 0.1}{100} = 127 \text{ MBH}
\]

• **PRESSURE TEST** - Operation performed to verify gas tight integrity of gas piping following its installation or modification.

• **PURGE** - To free gas conduit of air or gas, or mixture of gas and air.

• **PURGE TIME** - Period of time intended to allow for dissipation of any unburned gas or residual products of combustion.
QUALIFIED AGENCY - Any individual, firm, corporation, or company engaged in and responsible for:

- Installation, testing, or replacement of gas piping, or connection, installation, testing, repair or servicing of appliances and equipment.
- Experienced in such work.
- Familiar with all precautions required.
- Complies with all requirements of authority having jurisdiction.

SAFETY RELIEF VALVE - Valve designed to relieve pressure in hot water supply system when pressure exceeds pressure capability of equipment.

SAFETY SHUTOFF DEVICE - Device that will shut off gas supply to controlled burner in event source of ignition fails.

SEDIMENT TRAP - Gas piping arrangement designed to collect any liquid or solid contaminant before reaching gas valve.

VENT - Passageway used to convey flue gases from appliance vent connector to outdoors.

VENTING SYSTEM - Continuous open passageway from appliance vent connector to outdoors for purpose of removing flue or vent gases.
1.1 Introduction
Boiler is equipped with programmable electronic control and user interface module.

1.2 Operation
- Display: 4x20 character LCD screen to show boiler status.
- Function Keys

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reset</td>
<td>Manual Lockout Reset</td>
</tr>
<tr>
<td>Menu</td>
<td>Enter/Exit user menu, Go to previous screen</td>

</tr>
<tr>
<td>+</td>
<td>Scroll up to next menu item, Increase value</td>
</tr>
<tr>
<td>-</td>
<td>Scroll down to next menu item, Decrease value</td>
</tr>
</tbody>
</table>

1.3 Status Indication
The following status screens can be displayed:

**Boiler Status Indicator**
- F = Flame Detected
- P = Central Heating System pump On
- B = Combustion Air Blower On
- S = Safety Relay Check
- G = Gas Valve Open
- D = DHW Pump On

**Combustion Air Blower Speed Indicator**

**Service Reminder Indicator**
- Boiler in Standby Mode
- Boiler Supply Water Temperature Indicator.

**Boiler Running in Central Heat mode**

**Boiler Running in DHW mode**

**Lockout Alarm Indicator**
Error code and short text description is displayed. Press ‘Reset’ key for manual reset.

**Blocking Error**
Error code and short text description is displayed. Boiler automatically returns to Standby Mode when condition is eliminated.

### APPENDIX A - CONTROL MODULE

#### 1.5 Theory of Operation

<table>
<thead>
<tr>
<th>User Interface Display</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| **STANDBY**            | **Boiler operates in standby mode until demand for Central Heat (CH) or Domestic Hot Water (DHW) is detected.**  
User Menu can be accessed by pressing ‘Menu’ key on user interface.  
Installer Menu can be accessed by simultaneously holding ‘Menu’ and ‘Enter’ keys for 5 seconds. |

| User Menu               | User Menu structure includes:  
- ‘Boiler Status’ submenu– User can monitor general boiler status parameters such as sensor temperatures and pump operation.  
- ‘Settings’ submenu – User can view CH , adjust DHW supply water set points and also select control language.  
- ‘Cascade Status’ submenu – Boiler set to function as part of multiple boiler installation; submenu used to view runtime parameters. See Multiple Boiler Manual. |

| User Menu               | Supply Temperature set point displayed.  
If boiler running in CH mode, CH set point displayed.  
Note:  
- While running in Outdoor Reset mode, this value may change in proportion with the outdoor temperature.  
- If the boiler is running in DHW mode, the DHW supply set point is displayed. |

| Boiler Status           | Several boiler runtime parameters can be viewed while in ‘Boiler Status’ submenu.  
Operational status of pump system also shown.  
Information available during all states of boiler operation.  
Sensor values with troubleshooting tree used to diagnose typical problems. |

### Control Module Logs

Control module logs successful and failed ignition attempts. Information accessed in 'Ignition Attempts' screen as shown.

Ignition attempts are stored in non-volatile memory and are retained in event of power failure.

#### Figure A-1 Typical Ignition Cycle

Following control features are implemented to ensure safe and reliable operation of Combustion System:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>False Flame Detection</strong></td>
<td>If flame is detected at end of pre-spark period (Ignit_0) than lockout will occur.</td>
</tr>
<tr>
<td><strong>Re-ignition</strong></td>
<td>If at end of safety period no flame detected control will go to post-purge removing unburned gas. Re-ignition attempt started following same cycle. Number of re-ignition attempts limited to 4 after which lockout occurs.</td>
</tr>
<tr>
<td><strong>Intermittent Operation</strong></td>
<td>Boiler can be firing continuously for 24 hours. Burner switched off and restart sequence follows.</td>
</tr>
<tr>
<td><strong>Flame out too late</strong></td>
<td>If flame detected after post purge lockout follows.</td>
</tr>
<tr>
<td><strong>Safety relay test</strong></td>
<td>In Safety ON/OFF state correct operation of safety relay is proved before ignition.</td>
</tr>
<tr>
<td><strong>UL3563 High Limit Temperature Device</strong></td>
<td>Boiler comes equipped with UL353 approved temperature high limit device. Gas Valve de-energized when supply temperature exceeds 203°F lockout follows.</td>

</thead>
<tbody>
<tr>
<td>’Address Selection” screen used to set boiler position in multiple boiler cascade installation. Refer to Multiple Boiler Installation Manual. Default setting of ‘0’ indicates boiler is operating in single boiler mode.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>BOILER CONFIG LOW WATER CUTOFF ▲</th>
<th>Disabled ▼</th>
</tr>
</thead>
<tbody>
<tr>
<td>Boiler incorporates integrated Low Water Cutoff device (LWCO) that disables boiler when low water condition exists. LWCO device located at high point of internal Heat Exchanger loop to detect low water condition. Detection of low water condition will result in blocking error; boiler will automatically resume normal operation when proper water level returns. Refer to Troubleshooting Guide. LWCO device can be disabled for diagnostic purposes or where applicable code permits.</td>
<td></td>
</tr>
</tbody>
</table>
### Boiler Configuration

**User Interface Display**

<table>
<thead>
<tr>
<th>Pump Mode</th>
<th>CH or CH&amp;DHW</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td></td>
</tr>
</tbody>
</table>

**Explanation**

Two pump modes are available:

1. **Pump Mode = 0 'CH or CH&DHW'**
   - In this mode either the CH or DHW pump terminal is energized depending on the type of demand (CH or DHW).
   - CH and DHW pumps are never energized at the same time.
   - In the case of a simultaneous call for both CH and DHW, the energized pump depends on whether the boiler is currently supplying the CH or DHW demand. Refer to DHW Priority settings below.
   - This is typical of a hydronic system design with separate CH and DHW Pumps.

2. **Pump Mode = 4 'System Pump'**
   - In this mode only one external system pump is installed in the hydronic system. This pump will energize independent of the type of demand (CH or DHW).
   - Connect this pump to the CH/System Pump electrical terminal block. See page 56 for diagram.
   - The DHW pump terminal does not function.
   - This is typical of a hydronic system design which utilizes zone valves for all CH zones and an DHW indirect tank.

**Note:**

- Pump Mode selection depends on electrical and hydronic system design. Please refer to sections 5 and 8 for recommended hydronic piping and electrical configurations.
- Internal heat exchanger pump is energized anytime demand exists regardless of Pump Mode setting or type of demand (CH or DHW).

'Service Reminder' feature allows the installer to enable or disable a service reminder notification on the User Interface at a predefined interval.

Service reminder does not affect operation of boiler in any way. It is only a reminder to End User that routine preventative maintenance is required by qualified service technician.

**Allowed Range:** 1 to 999 days
<table>

<table>
<thead>
<tr>
<th>DHW Settings</th>
<th>User Interface Display</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| ![DHW Settings](image3) | Two DHW modes are available
- **DHW Mode = 0 'No DHW**
  - DHW Mode is disabled
  - The DHW thermostat input is ignored and the DHW pump is not used.
- **DHW Mode = 2 'DHW Store with Thermostat’**
  - Boiler reacts to DHW demand when DHW thermostat input closes.
  - Boiler modulates to meet DHW demand similar to CH Mode except DHW set point is used. DHW set point set in Settings’ submenu found in ‘User Menu’.
  - Simultaneous CH & DHW demands handled using DHW Priority Timing. See ‘DHW Maximum Priority Time’ setting below.

**Note:**
- Outdoor reset function disabled while operating in DHW Mode.
- Typical when using a DHW indirect storage tank.
- After DHW demand satisfied, boiler enters post purge mode and DHW pump continues to run for 15 seconds. | |
# APPENDIX A - CONTROL MODULE

<table>
<thead>
<tr>
<th>DHW Settings</th>
<th>User Interface Display</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="DHW Settings" /></td>
<td></td>
<td>Maximum time boiler operates in DHW mode limited by DHW Maximum Priority Time Setting. Priority timer starts when both CH and DHW demand is present. Boiler will switch from DHW back to CH operation after Maximum Priority Time has elapsed. CH demand then has priority until Maximum Priority Time has elapsed. Process repeats until either CH or DHW demand satisfied.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>System Test</th>
<th>User Interface Display</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| ![System Test](image) | | System test can be activated via installer menu for testing system at fixed power rates. Boiler can be started without CH or DHW demand being present. System Test has priority over any system demand while test mode activated. System test mode automatically ends after 30 minutes boiler resumes normal operation. The following modes are available:  
- Disabled  
- Low power - Burner starts. After ignition period has finished the burner stays at low power  
- Ignition power - Burner starts. Stays at ignition power  
- High power - Burner starts. After ignition period has finished burner stays at high power. |

Note:  
- Before running system test modes, check if hydronic system capable of dissipating heat.  
- Both heat exchanger and CH pumps are activated during system test only.  
- During System Test Mode, boiler will run at fixed power rates until supply water temperature is 93°C/195°F  
- All other safety functions remain active while in System Test Mode.
