1 - INTRODUCTION

1.1 Designated Use
• Hot water heating boiler.
• Indoor installation.
• Closet or alcove installation.
• Direct vent boiler.
• For use with natural gas or liquefied petroleum gases (LP/propane).

1.2 The unit MUST NOT:
• Directly heat potable water. Indirect heating is acceptable.
• Heat water with non-hydronic heating system chemicals present (example, swimming pool water).
• Exceed 150 psig (1.03 MPa) system pressure.
• Exceed 195°F (90.5°C) system design temperature.

1.3 Operational Features
• Modulating: 20-100%.
• Integral Dual Limit.
• Integral Low Water Cutoff (with test button).
• Outdoor Temperature Reset.
• Integral Multiple Boiler Control.
• Heat exchanger over heat protection.
2 - IMPORTANT SAFETY INFORMATION

2.1 General
Boiler installation shall be completed by qualified agency. See glossary for additional information.

**WARNING**
Fire, explosion, asphyxiation and electrical shock hazard. Improper installation could result in death or serious injury. Read this manual and understand all requirements before beginning installation.

2.2 Become familiar with symbols identifying potential hazards.

This is the safety alert symbol. Symbol alerts you to potential personal injury hazards. Obey all safety messages following this symbol to avoid possible injury or death.

**DANGEROUS**
Indicates a hazardous situation which, if not avoided, WILL result in death or serious injury.

**WARNING**
Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION**
Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

**NOTICE**
Used to address practices not related to personal injury.

2.3 Installation shall conform to requirements of authority having jurisdiction or in absence of such requirements:

- United States
  - National Electrical Code, NFPA 70.
- Canada
  - Natural Gas and Propane Installation Code, CAN/CSA B149.1.
  - Canadian Electrical Code, Part I, Safety Standard for Electrical Installations, CSA C22.1

2.4 Where required by authority having jurisdiction, installation shall conform to Standard for Controls and Safety Devices for Automatically Fired Boilers, ANSI/ASME CSD-1.

Additional manual reset low water cutoff may be required.

2.5 Requirements for Commonwealth of Massachusetts:
Boiler installation must conform to Commonwealth of Massachusetts code 248 CMR which includes but is not limited to:
- Installation by licensed plumber or gas fitter.
3 - COMPONENT LISTING

3.1 Component Listing

1. **User Interface** - Displays information regarding boiler condition. Allows adjustment of boiler operating parameters. NOTE: Does not replace thermostat used to control central heating space.

2. **Combustion Air Inlet (2" PVC)** (see Section 6)

3. **Return Water From Heating System (In) 1-1/4" NPT** - Connections supplied to connection top and/or bottom of boiler. See Section 5.

4. **Low Voltage Terminal Strip** Connection of all low voltage wiring, including thermostat. See section 8.

5. **Igniter**

6. **Flame Sensor**

7. **Sight Glass** Permits observation of burner flame.

8. **Burner**

9. **Heat Exchanger**

10. **Condensate Collector**

11. **Return Water Temperature Sensor**

12. **Drain Valve**

13. **Heat Exchanger Ball Valve**

14. **Supply Water Outlet to Heating System (Out) 1-1/4" NPT** Connections supplied for connecting from either top or bottom of boiler. See section 5.

15. **Vent Temperature Sensor**

16. **Condensate Drain** Boiler produces a liquid (condensate) as a by-product of combustion. Condensate must be piped to appropriate drain. See section 6.

17. **Heat Exchanger Pump**

18. **Gas Shutoff Valve** - Fuel supply isolation during servicing. See section 7

19. **Combustion Air Blower** Delivers proper quantity of combustion air, receives fuel from gas valve, mixes air and fuel sending mixture to burner for combustion.

20. **Gas (Control) Valve** Delivers proper quantity of fuel to Combustion Air Blower. See section 7.

21. **Supply Water Temperature Sensor and High Limit Switch**

22. **Low Water Cutoff** Senses inadequate quantity of water. Turns off boiler before damage can occur.

23. **Safety Relief Valve** Factory supplied, Field installed. See section 5.

24. **High Voltage Junction Box** For connection of 120V components. See section 8.

25. **Vent Connector** See section 6.

26. **Gas Connection** (See section 7)

27. **Wall Hanging Support Bracket** (see page 7) - Integral to boiler. Allows optional wall mounting when used with supplied wall mounting bracket. See section 4.

28. **Auxiliary Power Outlet** Convenience outlet for condensate pump or service. Controlled by Service Switch (29)

29. **Service Switch**

30. **Air Vent**

31. **Central Heating Pump Circuit Breaker** 5 amp circuit breaker protects control module.

32. **Boiler Control Module**

33. **Internal Access Panel** (see page 9) - Gently pull upward then forward to access control module. Removable for access to internal components of boiler.

34. **Central Heating Pump Relay** (see page 9)

35. **Transformer** Supplies 24V power to low water cutoff.

36. **Air Pressure Switch** (not shown)

37. **Test Port** - (see page 8)

38. **Combustion Analysis Test Port** - (see page 8)

4 - LOCATING BOILER

4.1 Boiler Location Considerations

- Ambient room temperature always above 32°F (0°C) to prevent freezing of liquid condensate.
- Approved for installation in closets and on combustible floors. Do not install boiler on carpeting.
- Protection of gas ignition system components from water (dripping, spraying, rain, etc.) during operation and service (circulator replacement, condensate trap, control replacement, etc.).
- Floor or wall mounting.
  - Wall must be plumb and capable of supporting boiler weight plus 60 lbs (28 kg). See Table 1.
  - Floor must be level. Leveling feet allow adjustment up to 1/4" (6 mm).
  - Wall mounting. See section 4.3.
- Access to outdoors to meet minimum and maximum pipe lengths for combustion air and vent piping. See section 6.
- Disposal of condensate. See section 6.
- Drainage of water (or water - antifreeze solution) during boiler service or from safety relief valve discharge. See section 5.
- Access to system water piping, gas supply, and electrical service. See sections 5, 7 and 8.
- Clearances to combustible materials and service clearances. See Table 2 and figure 4-1.
- Multiple Boilers can be placed side by side, back to back or wall mounted.

### TABLE 2: BOILER CLEARANCES

</tbody>
</table>

(1) Required distances measured from boiler.
(2) Service, proper operation clearance recommendation.

**FIGURE 4-1 Clearance to Combustible Materials**
4 - LOCATING BOILER

4.2 Pre-pipe supply and return water connections with factory fittings before wall mounting.

4.3 Wall Mounting
Mount boiler on wall using wall mounting bracket included with unit.
- Structure must be capable of supporting boiler weight plus 60 lbs (28 kg). See Table 1, page 2.
- Wall mount bracket has 4 slots allowing mounting on two (2) wall studs spaced at 11½" to 16½" on center. See figure 4-2.
- Boiler includes (4) 3/8" x 3" lag screws and (4) washers for attaching wall mount bracket to wood studs. Field source appropriate fasteners for other wall constructions (masonry, concrete).
- Attach wall mount bracket level on wall.
- Boiler must engage with wall mount bracket.
- Avoid overhang on sides of wall mount bracket. Verify boiler bracket is centered on wall bracket. See figure 4-2.

**WARNING**
Fire, explosion hazard. Mount boiler vertically or slightly tilted backward to insure proper function of low water cutoff. Failure to follow these instructions could result in death or serious injury.
- When mounting boiler onto wall insert two plastic stoppers and two plastic plugs to packaging holes on back of boiler.
- Mount boiler vertically or slightly tilted backward to insure the low water cutoff functions properly. See figure 4-3 for low water cutoff orientation.

**CAUTION**
Boiler weight exceeds 115 pounds (51.2 kg). Do not lift boiler onto wall without assistance.

**NOTICE**
Lift boiler using chassis. Using front jacket, vent piping, water or gas fittings to lift boiler may cause damage to the boiler.
5 - HYDRONIC PIPING

5.1 General

- Install piping in accordance with authority having jurisdiction.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use two (2) wrenches when tightening and fitting to pipe boiler's threaded fittings. Boiler's internal piping can be damaged if subjected to excessive torque.</td>
</tr>
</tbody>
</table>

- Support system piping and safety relief valve discharge piping. Boiler's internal piping and wall mount bracket can be damaged if subjected to excessive weight.
- Size central heating pump (and domestic hot water pump, if used) for system requirements only. Heat exchanger pump compensates for pressure drop through boiler internal piping and heat exchanger.
- Thoroughly clean and flush system before connecting to boiler.
- If oil is present in system water, use approved detergent to wash system.
- Flush system to remove any solid objects such as metal chips, fibers, or Teflon tape, etc.

5.2 Special Conditions

- System piping exposed to freezing conditions: Use inhibited propylene glycol solutions certified by fluid manufacturer for use with closed water heating system. Do not use automotive or ethylene glycol.
- Boiler installed above radiation level (or as required by authority having jurisdiction). Integral low water cutoff provided in boiler. See pages 7 & 9.
- Boiler used in connection with refrigeration system. Install piping in parallel with boiler, with appropriate valves to prevent chilled medium from entering boiler.
- System piping connected to heating coils located in air handling unit exposed to refrigerated air circulation. Install flow control valves or other automatic means to prevent gravity circulation of boiler water during cooling cycle.

5.3 Safety Relief Valve and Air Vent

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Boiler rated at 150 psig (1.03 MPa) maximum allowable working pressure. Boiler provided with 30 psig (206 kPa) safety relief valve. Field source safety relief valve for system pressures greater than 25 psig. Temperature Pressure Gauge satisfactory for 60 psig operation. Field source temperature pressure gauge for system pressures greater than 60 psig.</td>
</tr>
</tbody>
</table>

- Install safety relief valve and air vent using pipe fittings provided with boiler. See figure 5-1
- Install safety relief valve with spindle in vertical position.
- Do not install shutoff valve between boiler and safety relief valve.

⚠️ WARNING

- Poison hazard. Ethylene glycol is toxic. Do not use ethylene glycol.
- Never use automotive or standard glycol antifreeze, even ethylene glycol made for hydronic systems.
- Ethylene glycol can attack gaskets and seals used in hydronic systems.
- Use only inhibited propylene glycol solutions certified by fluid manufacturer as acceptable for use with closed water heating system.
- Thoroughly clean and flush any system that used glycol before installing new boiler.
- Provide user with Safety Data Sheet (SDS) on fluid used.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not expose boiler and condensate piping to freezing temperatures.</td>
</tr>
</tbody>
</table>

- 3/4” NPT Close Nipple
- 3/4”F x 3/4”M NPT Tee
- 3/4” x 1/4” NPT 90° Elbow
5.4 Trim Piping

- Supply and Return Piping
  - Supply - Select either top, bottom or both.
  - Return - Select either top, bottom, or both.
  - Use second temperature pressure gauge when piping top and bottom.
  - Install brass plug(s) provided with boiler in unused tapping(s). Use provided sealant.
- Temperature - Pressure Gauge. Install temperature pressure gauge using nipple, bushing and tee provided with boiler. See figure 5-3.

5.5 System Piping

- See Table 3 for basic system piping configurations.
- Systems with automatic fill valves require back flow prevention device.
- Single boiler system. See figures 5-4, 5-5, 5-6, 5-7 for general guidance. Additional considerations:
  - Boiler control is designed for single central heating pump. Installer responsible for integration of multiple central heating pumps.
  - Boiler control allows domestic hot water prioritization. Function could be lost if central heating pump not directly connected to control system.
- Multiple boiler system. See figure 5-8 for general guidance. Additional considerations:
  - Control system requires equivalent water temperatures entering each boiler to properly sequence and adjust system supply temperature.
  - Install multi boiler sensor kit. See "Parts, Kits & Optional Accessories" manual for part number.
- Heating system with existing primary loop, close internal primary loop ball valve.
- Heating system without existing primary loop, leave internal primary loop ball valve open to use internal primary loop.
5 - HYDROIC PIPING

**NOTICE**
Illustrations are meant to show system piping concept only. Installer responsible for all equipment and detailing required by authority having jurisdiction.

- Size common piping according to maximum heat capacity of entire system

- All heat exchanger ball valves closed

- Up to 16 boilers

(See Multiple Boiler Guide)
6 - COMBUSTION AIR AND VENT PIPING

6.1 General
This boiler requires a dedicated direct vent system. Install combustion air and vent piping in accordance with these instructions, authority having jurisdiction, and:

- Canada - Natural Gas and Propane Installation Code, CAN/CSA B149.1

Vent connections serving appliances vented by natural draft shall not be connected into any portion of mechanical draft systems operating under positive pressure.

Install vent system in accordance with these instructions.

6.2 Removal of Existing Boiler From Common Vent System
When existing boiler is removed from common venting system, common venting system is likely to be too large for proper venting of appliances remaining connected to it. After removal of existing boiler, following steps shall be followed with each appliance remaining connected to common venting system placed in operation, while other appliances remaining connected to common venting system are not in operation:

- Seal any unused openings in common venting system.
- Visually inspect venting system for proper size and horizontal pitch. Determine there is no blockage or restrictions, leakage, corrosion and other deficiencies which could cause an unsafe condition.
- When practical, close all building doors, windows, and all doors between space in which appliances remaining connected to common venting system are located and other spaces of building. Turn on clothes dryer and any appliance not connected to common venting system. Turn on exhaust fans, such as range hoods and bathroom exhaust so they will operate at maximum speed. Do not operate summer exhaust fan. Close fireplace dampers.
- Turn on appliance being inspected. Follow lighting instructions. Adjust thermostat so appliances will operate continuously.
- Test for spillage at draft hood relief opening after 5 minutes of main burner operation. Use flame of match or candle, smoke from cigarette, cigar or pipe.
- Determine each appliance remaining connected to common venting system properly vents when tested as outlined above. Then return doors, windows, exhaust fans and any other gas-burning appliance to their previous condition of use.

WARNING
Use of cellular core PVC for venting flue gas could result in death, serious injury.

WARNING
Covering non-metallic vent pipe and fittings with thermal insulation shall be prohibited.

Any improper operation of common venting system should be corrected so installation conforms with National Fuel Code, ANSI Z223.1/NFPA 54 and/or Natural Gas and Propane Installation Code, CAN/CSA B149.1. When re-sizing any portion of common venting system, common venting system should be re-sized to approach minimum size as determined using appropriate tables in Chapter 13 of the National Fuel Gas Code, ANSI Z223.1/NFPA 54 and/or Natural Gas and Propane Installation Code, CAN/CSA B149.1.

IPEX is approved vent manufacturer in Canada listed to ULC-S636.
IPEX System 636 Cements and Primers are approved in Canada listed to ULC-S636.

Use of cellular core PVC (ASTM F891), cellular core CPVC, or Radel®, (Polyphenolsulfone) in venting systems shall be prohibited.
### 6 - COMBUSTION AIR AND VENT PIPING

#### 6.4 Pipe Installation
- Minimum and maximum combustion air and vent pipe lengths listed in Table 5. Pipe length counted from combustion air connector to termination.
- Install field-sourced 2" to 3" transition, if used, in vertical section at combustion air inlet and vent connector.
- 90° elbows equivalent to 5.0 ft (1.6 m). 45° elbows equivalent to 3.5 ft (1.1 m). 2" to 3" transition has no equivalent length.
- Slope vent pipes minimum 1/4" per foot (21 mm/m) back toward boiler. Support horizontal sections to prevent sags capable of accumulating condensate.
- Support piping in accordance with pipe manufacturer's instruction and authority having jurisdiction. In absence of manufacturer's instruction use pipe hooks, pipe straps, brackets, or hangers of adequate and strength located at intervals of 4 ft (1.2m) or less. Allow for expansion/contraction of pipe.
- Combustion air and vent piping must be air tight and water tight.
- Certified vent system components must NOT be interchanged with other vent systems or unlisted pipe/ fittings.
- Canadian installations only. All venting material, primer and glue must be listed to ULC S636.
- Canadian installations only. First 3 ft (0.9 m) of plastic vent pipe from vent connector must be readily accessible for visual inspection.

#### 6.5 Termination
- Terminate combustion air and vent pipes with fittings or concentric vent kit.
  - See "Parts, Kits and Optional Accessory" manual for concentric vent kit part numbers.
  - Use horizontal pipe for vent and 90° elbow for combustion air termination when using fittings.
- Terminate combustion air and vent pipes in same atmospheric pressure zone when both terminals exit through the same exterior sidewall. If using T-terminal on the vent this requirement is not necessary.
- Locate combustion air termination as far as possible from swimming pool, swimming pool pump house, and other sources of airborne chlorine.
- Locate combustion air and vent as required by authority having jurisdiction.

![WARNING]

 Ventura extending through exterior wall shall not terminate adjacent to wall or below building extensions such as eaves, balconies, parapets or decks. Failure to comply could result in death or serious injury.

NOTICE
Use of vent covers may cause freezing. If using vent covers overall vent length must be considered. Failure to heed this information may compromise operation of this boiler.
6 - COMBUSTION AIR AND VENT PIPING

**Side Wall Terminations**
- **Combustion Air**
  - 12" (30 cm) Minimum horizontal separation between combustion air intake and vent of the same appliance.
  - 8" (21 cm) Minimum vertical separation between combustion air intake and vent of different appliances.
  - 12" (30 cm) Separation between bottom of combustion air intake and bottom of vent.
  - Multiple terminations as shown in 6-1, 6-2, and 6-3 must be a minimum of 12" (30 cm) horizontally between vent of one termination and air intake of next appliance.
  - Maximum allowable total outside exposure vent length equals 10 ft. (3.05m).
  - Maintain a pitch of 1/2" per ft (0.15m/m) back to boiler to ensure proper condensate drainage for horizontal runs.

**Roof Terminations**
- **Combustion Air**
  - 3" (8 cm) Minimum horizontal separation between combustion air intake and vent of the same appliance.
  - 8" (21 cm) Minimum vertical separation between combustion air intake and vent of different appliances.
  - 15" (38 cm) Maximum horizontal length of vent.
  - Minimum vent/intake between different appliances 12" (30 cm).
  - Maximum allowable total vertical vent length with outside exposure equals 10 ft. (3.05m).
  - Abandoned unused masonry chimney may be used as chaseway for combustion air and vent. Both combustion air and vent pipe must exit above top of chimney with clearances as shown in Figure 6-1.

**Figures**
- **Figure 6-1**
- **Figure 6-2**
- **Figure 6-3**
**FIGURE 6-4 Side Wall Concentric Terminal**

- Maximum combustion air vent: 1" (25.4mm)

**FIGURE 6-5 Side Wall Concentric Terminal Multiple Appliances**

- Minimum roof overhang: 1" (255mm)
- Maintain 12" (305mm) clearance above highest anticipated snow level or grade

*Must be less than 4" (102mm) or greater than 24" (610mm) horizontal distance between end bells of each air intake to prevent flue gas recirculation.

**FIGURE 6-6 Concentric Terminal Connection**

- PVC intake/combustion air:
  - *2 or 3" (51 or 77 mm) Diameter
  - *2" (51mm) Diameter = 41" Length (1.1m)
  - 3" (77mm) Diameter = 47" Length (1.2m)

**Note:** Securing strap must be field installed to prevent movement of termination kit in side wall.

- OD 3½" (89mm) - *2" (51mm) kit
- OD 4½" (114mm) - 3" (77mm) kit

**2" (51mm) Diameter**

- 41" Length (1.1m)
- 3" (77mm) Diameter = 47" Length (1.2m)

**SDR-26 PVC (D2241) only may be used for extending pipes. Do not use Schedule 40 PVC or use couplings to extend pipes. Dimension will change if intake/vent pipes are lengthened or shortened.**

* Note:
  - 2" (51mm) For use with models 075/100
  - 3" (77mm) For use with models 075/100
Concentric Vent Roof Terminations

- Glue inner vent pipe to prevent recirculation.
- Maintain 12" (305mm) US (18"(457mm) Canada) clearance above highest anticipated snow level. Maximum of 24"(610mm) above roof.
- Support must be field installed to secure termination kit to structure.
- Elbow, roof boot/flashing field supplied.
- Allowed Wall/Roof thickness 1/2"-30" (12.7mm - 762mm).
- Vertical concentric vent system can be installed in unused masonry chimney.
- Contact Technical Support 800-325-5479 for questions regarding installation or use.

Grade, Snow & Ice

Terminate vent system bottom, minimum 12" (300 mm) above highest anticipated snow level.

Avoid locations where snow may drift and block vent and combustion air. Ice or snow may cause boiler to shut down if vent or combustion air becomes obstructed.

Doors & Windows

Combustion air and vent termination must be 12" (305mm) from or below doors, windows or gravity inlet.

* See Tables 5 & 6

Combustion air and Vent Piping Length Page 19.
6 - COMBUSTION AIR AND VENT PIPING

**FIGURE 6-10 Flue on Sidewall, Combustion Air on Roof**

Maintain 12" (305mm) US (18" (457mm) Canada) clearance above highest anticipated snow level 24" (610mm) above roof.

**NOTICE**

Configurations of single pipe vent with flue on the sidewall, requires a tee as the vent terminal. See figures 6-10 and 6-11.

**FIGURE 6-11 Flue on Sidewall, Inside Combustion Air**
6.8 Side Venting Terminal Requirements of:

| Venting terminal from doors and windows | See figure 6-12 |
| Venting terminal from forced air inlet of other appliances | See figure 6-13 |
| Venting terminal from snow level | See figure 6-14 |
| Venting terminal from vegetation | See figure 6-15 |
| Venting terminal from public walkway | See figure 6-16 |

**Figure 6-12**
- Termination must be 12" (305mm) from or below doors, windows or gravity inlet.

**Figure 6-13**
- Termination
  - 3' (0.9m) [If located within 10' (3m) of forced air inlet]
  - Less than 10' (3m) Minimum

**Figure 6-14**
- Terminate vent system bottom, minimum 12" (300 mm) above highest anticipated snow level.
- Avoid locations where snow may drift and block vent and combustion air. Ice or snow may cause boiler to shut down if vent or combustion air becomes obstructed.
- Vent termination shall NOT be installed closer than 3' (0.9m) from inside corner of “L” shaped structure.
6 - COMBUSTION AIR AND VENT PIPING

**Multiple Family Dwellings**
Vent shall not terminate directly above paved sidewalk or paved driveway located between two single-family dwellings serving both dwellings.

**Vegetation, Plants & Shrubs**
Keep vent termination 3’ minimum (0.9m) away from vegetation. Position termination where vent vapors will not damage plants/shrubs or air conditioning equipment.

**Meters, Regulators, deck, porch**
Vent termination US only - 4’ (1.2m), Canada - 6’ (1.9m) horizontally from, no case above or below, electric meters, gas meters, regulators, and relief equipment, or under deck or porch.

**Walkways**
Locate vent termination minimum 7’ (2.1m) above any public walkway, with consideration to condensate.

**People or Pets**
Locate combustion air and vent termination to prevent accidental contact with people or pets.

**Stones, Balls, Etc.**
Position combustion air and vent termination where it will NOT be damaged by foreign objects, such as stones, balls, etc.

**Vapors**
Position termination where vent vapors are not objectionable.

**Eddy, Flue Gases**
Position termination so it will not be effected by wind eddy, air born leaves, snow, or recirculated vent gases. Give consideration to excessive wind and locate away from windward side of building.

**FIGURE 6-15**

**FIGURE 6-16**
6 - COMBUSTION AIR AND VENT PIPING

6.9 Condensate Piping

- Use materials acceptable to authority having jurisdiction. In absence of such authority:
  - USA - PVC or CPVC per ASTM D1785/D2845 Cement or primer per ASME D2564 or F493.
  - Canada - CSA or ULC certified PVC/CPVC pipe, fittings and cement.
- Insert 1/2" (1.3 cm) PVC pipe through grommet in chassis. See figure 3-2.
- Attach PVC tee provided with boiler and field sourced piping to condensate drain vertical tee on left side of boiler. See figure 6-17.
- Slope condensate drain pipe minimum 1/4" per foot (21mm/m) away from boiler.
- Use condensate pump if boiler located below disposal point. 120 VAC auxiliary power outlet can be used to power condensate pump.
- Field source condensate neutralizing kit as required by authority having jurisdiction or for environmentally friendly condensate disposal.
7 - GAS SUPPLY PIPING

7-1 Gas Connection Knockout Plate at Bottom of Boiler

7-2 Gas connection at Top of Boiler

7-3 Bottom Gas Connection

7.1 General

- Use piping materials and joining methods acceptable to authority having jurisdiction. In absence of such requirements:
  - USA - National Fuel gas Code, ANSI Z223.1/NFPA 54
  - Canada - Natural Gas and Propane Installation Code, CAN/CSA B149.1
- Size and install gas piping system to provide sufficient gas supply to meet maximum input at not less than minimum supply pressure. See Table 8.
- Support piping with hooks straps, bands, brackets, hangers, or building structure components to prevent or dampen excessive vibrations and prevent strain on gas connection. Boiler will not support piping weight.
- Use thread (joint) compound (pipe dope) suitable for liquefied petroleum gas.
- Provide sediment trap up stream of gas valve.

7.2 Conversion Kit Instructions
- See Gas Conversion Kit Instructions included with Boiler.

---

**TABLE 8: GAS SUPPLY PRESSURE**

<table>

</tr>
<tr>
<td></td>
<td>(0.7 kPa)</td>
<td>(3.3 kPa)</td>
<td>(1.2 kPa)</td>
</tr>
</tbody>
</table>

**CAUTION**

**WHAT TO DO IF YOU SMELL GAS**

- Do not try to light any appliance.
- Do not touch any electrical switches; do not use any phones in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

**NOTICE**

Use two (2) wrenches when tightening and fitting to pipe boiler’s threaded fittings. Boiler’s internal piping can be damaged if subjected to excessive torque.

**Note:** See Glossary - Piping Table 16
7.3 Near Boiler Gas Piping
- Select top or bottom gas connection. To convert from top connection to bottom connection:
  - Remove bottom knockout by removing two (2) screws. See figure 7-1.
  - Disconnect gas connection by removing two (2) screws. See figure 7-2.
  - Relocate gas connection to bottom opening. Secure with two (2) screws. See figure 7-3.
  - Relocate knockout cover to top opening. Secure with two (2) screws. See figure 7-4.
- Install field sourced manual main shutoff valve and ground joint union. See figure 7-5.

7.4 Leak Check Gas Piping
Pressure test boiler and gas connection before placing boiler in operation.
- Pressure test over 1/2 psig (3.5 kPa). Disconnect boiler and its individual gas shutoff valve from gas supply system.
- Pressure test at 1/2 psig (3.5 kPa) or less. Isolate boiler from gas supply system by closing manual gas shutoff valve. See figure 7-6.
- Locate leakage using gas detector, noncorrosive detection fluid, or other leak detection method acceptable to authority having jurisdiction. Do not use matches, candles, open flames, or other methods providing ignition source.
- Correct leaks immediately and retest.
8 - ELECTRICAL CONNECTIONS

8.1 General
Electrically bond boiler to ground in accordance with requirements of authority having jurisdiction. Refer to:
- USA - National Electrical Code, ANSI/NFPA 70.

8.2 Line Voltage Connections (Figure 8-1)
- Boiler
  A. Provide individual 120V, 15 amp circuit (recommended) with fused disconnect or service switch, as required by authority having jurisdiction.
  B. Open High Voltage Junction Box (see Figures 3-1, 3-2) to access line voltage terminal strip.
  C. Connect 120 VAC circuit to line voltage terminal strip 120 VAC L,N,G.
- Central Heating Pump, if used.
  A. Isolate pump from control module if pump FLA (Full Load Amps) exceeds 5 amps.
  B. Connect pump to line voltage terminal strip CH PUMP L,N,G.
- Domestic Hot Water Pump, if used.
  A. Isolate pump from control module if pump FLA exceeds 1.0 amp.
  B. Connect pump to line voltage terminal strip DHW PUMP L,N,G.

8.3 External Connections (Figure 8-2)
- User Interface Terminals
  A. Factory wired to low voltage terminal plug USER INTERFACE terminals
  B. Optional - Remote mount user interface for improved access.
  C. Maximum wire length is 100 ft (30m) for 22 ga. wire, or 150 ft (45m) for 18 ga. wire.
- Argus Link (Multiple boiler applications only)

WARNING
Electrical shock hazard. Turn OFF electrical power supply at service panel before making electrical connections. Failure to do so could result in death or serious injury.

NOTICE
Wiring diagrams can be found in Section 14 of this Manual.

8-1 LINE VOLTAGE CONNECTIONS
(Do not apply external voltage to external terminals.)

8-2 EXTERNAL CONNECTIONS
(Do not apply external voltage to external terminals.)
8 - ELECTRICAL CONNECTIONS

• Outdoor Sensor, if used.
  A. Provided with boiler in accessory kit.
  B. Locate outdoor sensor to protect against wind and direct sunlight. Mounting instructions provided with sensor.
  C. Maximum wire length is 100 ft (30m) for 22 ga. wire, or 150 ft (45m) for 18 ga. wire.
  D. Connect wires to low voltage terminal plug OUTDOOR SENSOR terminals. Wires are interchangeable.

• System Sensor (Multiple boiler applications only)

• Domestic Hot Water (DHW) Thermostat, if used.
  A. Use temperature control with dry contacts rated at 0.5 amps @ 120 VAC. Boiler control does not provide power to DHW temperature control.

  NOTICE
  Do not apply power to DHW T-T terminals. Dry contact only, use of isolation relay may be necessary.

  B. Maximum wire length is 330 ft (100 m) 22 gauge wire.
  C. Connect wires (interchangeable) to low voltage terminal plug DHW T-T terminals. Wires are interchangeable.

• Central Heating Thermostat
  A. Use thermostat or boiler system control with dry contacts related 0.5 amps @ 120 VAC. Boiler control does not provide 24 VAC power to central heating thermostat.
  B. Locate and install thermostat per manufacturer's instructions. Maximum wire length is 330 ft (100 m) for 22 ga. wire.
  C. Connect wires to low voltage terminal plug CH T-T terminals. Wires are interchangeable.

  NOTICE
  Use dry contact for wires to CH T-T terminal and DHW T-T terminal. E33 error code is displayed if voltage is sent back to the control board. If error is not corrected for extended period of time, this voltage can permanently damage control board.
9 - START UP PROCEDURE

9.1 Fill Boiler With Water And Purge Air

**NOTICE**
To maintain boiler efficiency and prevent boiling inside the heat exchanger, flush entire heating system until clean.

- Flush heating system, including all heating zones.
- Fill boiler with potable water.
- Fill boiler and system piping with water (or antifreeze-water solution, if used). See antifreeze information page 12. Purge air from boiler using air vent. Purge air from system piping.
- Close air vent after all air is purged from both boiler and system piping.
- Inspect system piping and boiler connections. Repair any leaks immediately.
- Activate all heating zones and calls for heat, including CH calls and DHW calls (if available).
- Close manual gas shut off valve. Let system run for 30 minutes. When boiler goes into lockout, reset boiler by pressing "Reset" button until boiler resets.
- Do not open gas shutoff valve until all air is purged from system.

9.2 Fill Condensate Trap with Water

- Disconnect collet clip from elbow. See figure 9-1.
- Disconnect tubing below elbow.
- Pour about 1 cup (237ml) of water into condensate drain.
- Reconnect tubing to elbow with collet clip. See Figure 9-1 Condensate Drain Assembly

1. Disconnect collet clip from hose barb and fill Condensate trap with water.

2. Reconnect collet clip to hose barb before starting boiler.

**NOTICE**
Condensate trap must be manually filled with water at initial start up.
### 9 - START UP PROCEDURE

* List parameters in event of Control Module Failure to reprogram your settings.
9.4 Boiler Start-up and Operational Test

1. Verify air is purged from hydronic piping
2. System test pumps - verify each pump is operational
3. Verify gas piping
   • Confirm pressure test. See section 7.4.
   • Visually inspect piping to determine there are no open fittings or ends, and all valves at unused outlets are closed and plugged/capped.
   • Purge air from piping
   • Check piping and connections for leaks immediately after gas is turned on. Shut off gas supply and make necessary repairs if leaks found.
4. Follow OPERATING INSTRUCTIONS to initiate boiler operation. See section 10.
5. Inspect combustion air and vent piping. Verify pipe is not leaking and terminations are unobstructed and vent gas discharge is not a nuisance or hazard.
6. Verify boiler functions.
7. Inspect condensate disposal system. Verify condensate flows adequately and is disposed properly.
8. Check control module operation.
9. Check field sourced limits, low water cutoffs, etc. per manufacturer's instructions.

9.5 Check Combustion

Natural Gas

1. Measure input. English units*
   • Turn off gas to all other appliances.
   • Activate some heating zones to dissipate heat.
   • Set boiler on high fire.
   • Use ½, 1 or 2 cu ft dial on gas meter. Measure time required for one or more complete revolutions. Measure time for 1-2 minutes.
   • Calculate input.

\[
\text{Input (MBH)} = \frac{3600 \times \text{cu ft}}{\text{seconds}}
\]

Example: Gas flow from Meter = 2 cu ft
Measured time = 72 seconds

\[
\text{Rate (MBH)} = \frac{3600 \times 2 \text{ cu ft}}{72 \text{ seconds}} = 100 \text{ MBH}
\]

*Metric - See Glossary

2. Compare measured input to table. Adjust input rate if needed using Table 12 below.

Table 12 - Rate @ High Fire

<table>
<thead>
<tr>
<th>Size</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>

<td>65</td>
<td>85</td>
</tr>
<tr>
<td>100</td>
<td>90</td>
<td>102</td>
</tr>
</tbody>
</table>

Natural Gas and Propane

3. Measure CO₂ at high fire and compare to table. Adjust CO₂ if needed using figure 9-3. See figure 9-5 combustion air analyzer port.

Natural Gas only**

4. Measure input. Compare to table above. Continue to measure input and CO₂ until both measured values are within range specified in tables.
9 - START UP PROCEDURE

Verify Burner, Proper Operation
1. Inspect burner flame through Sight Glass. See figure 9-5.
2. Operate boiler through several heating cycles, including domestic hot water, if used. Verify proper operation.
3. Reset control parameters to operating settings if adjusted to allow startup and operation test.
4. Follow instructions TO TURN OFF GAS TO APPLIANCE if boiler is not being placed into immediate operation.
5. Enter installer information on Warranty Registration Card.
6. Gather all instructions, manuals, wiring diagrams, warranty registration card and other supporting information. Review with user and/or affix in conspicuous location adjacent to boiler.

### Natural Gas only**
1. Measure input. Compare to table above. Continue to measure input and CO₂ until both measured values are within range specified in tables.

### Propane Gas
Most propane systems do not have flow meters.
1. Check CO₂. Propane should be between 10% and 11.0%.
   - If CO₂ is low increase gas flow following figure 9-3 & 9-4.
   - If CO₂ is high decrease gas flow following figure 9-3 & 9-4.

### NOTICE
Contact Technical Support @ 800-325-5479 for additional information or assistance.

**Natural Gas only**

**Propane Gas**

Most propane systems do not have flow meters.
1. Check CO₂. Propane should be between 10% and 11.0%.
   - If CO₂ is low increase gas flow following figure 9-3 & 9-4.
   - If CO₂ is high decrease gas flow following figure 9-3 & 9-4.

### FIGURE 9-3 Gas Valve - Models 075/100 MBH

- To increase gas flow turn ‘throttle’ left or counter clockwise.
- To decrease gas flow turn ‘throttle’ right or clockwise.
- Limit adjustment to one turn and retest.
9 - START UP PROCEDURE

9.6 Perform CSD-1 Compliance Test (see paragraph 2.5 page 6)
Verify operation of boiler safety control operation with regard to no flow conditions as follows:
1. Turn off boiler using boiler service switch.
2. Disable primary boiler pump. Disconnect multi pin connector J7 from control module. See figure 9-6.
3. Disable secondary system pumps attached to system.
5. Boiler will fire. Based on natural convection within boiler, boiler will either:
   OR
   B. Shut off burner E40 "Return Water Temp". This is a soft lockout. When water temperature drops below limit boiler will automatically refire then Lockout A-06 requiring manual reset of control module. Press Reset button on User Interface.
   OR
   C. Shut off burner E39 "Flue Temperature Sensor". This is a soft lockout. When flue sensor drops below limit, boiler will automatically refire then Lockout A-06 requiring manual reset of control module. Press Reset button on User Interface.
6. After safety operation is verified, turn off boiler via service switch. Remove jumper in T-T. Replace J7 connector into control module, enable secondary pump operation, turn service switch on and restart system to verify operation.
9 - START UP PROCEDURE

9.7 Complete Start Up Procedure

1. Reset control parameters to operating settings if adjusted to allow startup and operation test.

2. Follow instructions TO TURN OFF GAS TO APPLIANCE (page 39) if boiler is not being placed into immediate operation.

3. Enter installer information on Warranty Registration Card.

4. Gather all instructions, manuals, wiring diagrams, warranty registration card and other supporting information. Review with user and/or affix in conspicuous location adjacent to boiler.
10 - OPERATING INSTRUCTIONS

FOR YOUR SAFETY READ BEFORE OPERATING

**WARNING**

If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- This appliance is equipped with an ignition device which automatically lights burner. **Do NOT try to light this burner by hand.**

- Before operating smell all around appliance area for gas. Be sure to smell next to floor because some gas is heavier than air and will settle to the floor.

- **Use only your hand to turn the gas shutoff valve.** Never use tools. If valve will not turn by hand, do not try to repair it, call a qualified service technician. Force or attempted repair may result in fire or explosion.

- **Do not use this appliance if any part has been under water.** Immediately call a qualified service technician to inspect appliance and to replace any part of control system and any gas control which has been under water.

---

10.1 OPERATING INSTRUCTIONS

*Stop! Read Safety information above.*

- Set thermostat to lowest setting.
- **Turn "OFF"** all electrical power to appliance.
- This appliance is equipped with an ignition device which automatically lights the burner. **Do not try to light burner by hand!**
- Remove front jacket panel.
- Turn gas shutoff valve clockwise to closed position. Handle should be perpendicular to gas pipe.
- Wait 5 minutes for any gas to clear. Smell for gas, including near floor. If you smell gas, **STOP!** Follow instructions on this page: "**What To Do If You Smell Gas.**" If you do **not** smell gas, go to next step.
- Turn gas shutoff valve counter clockwise to the open position. Handle should be parallel to gas pipe.
- Replace front jacket panel.
- **Turn "ON"** electrical power to appliance.
- Set thermostat to desired setting.
- If the appliance will not operate, follow instructions TO TURN OFF GAS TO APPLIANCE and call your service technician or gas supplier.

---

10.2 TO TURN OFF GAS TO APPLIANCE

- Set thermostat to lowest setting.
- **Turn "OFF"** all electric power to appliance if service is to be performed.
- Remove front jacket panel.
- Turn gas shutoff valve handle clockwise to closed position. Handle should be perpendicular to gas pipe.
- Replace front jacket panel.

---

**CAUTION**

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switches; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

---

**10-1 Gas Shutoff Valve**

![Closed Position](image2)
**11 - GENERAL MAINTENANCE AND CLEANING**

### DANGER
Before servicing, turn off electrical power to boiler at service switch. Close manual gas valve to turn gas supply OFF to boiler.

### CAUTION
Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

### NOTICE
Verify proper operation after servicing.

### NOTICE
Perform regular service and maintenance by qualified service agency at least once every 12 months to assure safe, trouble free operation and maximum efficiency.

#### 11-1 Sight Glass

**11.1 Beginning of Each Heating Season**

- Check boiler area is free from combustible materials, gasoline, and other flammable vapors and liquids.
- Visually inspect combustion air and vent piping for proper operation. Check for and remove any obstruction to flow of combustion air or vent gases. Immediately repair or replace pipe showing deterioration or leakage. Reassemble per instructions in section 6. Ensure proper reassembly and resealing of system.
- Visually inspect condensate drain line for proper operation. Checking for deteriorated or plugged condensate drain line. Verify condensate trap drains freely.
- Test safety relief valve for proper operation. Refer to valve manufacturer's instructions packaged with relief valve.
- Examine flue passages in heat exchanger, burner, condensate lines, and cleaning (if necessary) by following instructions in “Annual Examination and Cleaning of Boiler Components” in this section.
- Circulator pump and combustion air blower motor furnished with boiler are permanently lubricated from factory and require no further lubrication. Lubricate field sourced pumps and/or motors should be lubricated according to pump and/or motor manufacturer’s instruction.
- Check following components are operating properly and are free of blockages or obstructions:
  - air vent;
  - check venturi air inlet for blockage and clean as required;
  - check air hose is tight
  - supply, return, and flue temperature sensor clips must be securely seated on pipes; Check boiler for any sign of leaks.
- Check low water cutoff using user interface.
  - Check operation by pressing test button on low water cutoff.
    - "Low Water" LED should illuminate and burner should shut down.
    - Should get error message on User Interface (E36).
  - Every 5 years remove low water cutoff. Reinstall after cleaning.
  - Every 10 years replace low water cutoff.
- Check flame signal with user interface. Should be 8 micro amps at 100%.
- Visual inspection of flame through sight glass. Burner should be fully illuminated. See figure 11-1.
- Check expansion tank.
11.2 Annual Shut Down Procedure

- Follow instructions “To Turn Off Gas To Appliance” unless boiler is also used to supply domestic hot water. See section 10 page 39.
- Drain system completely and add antifreeze when heating system is to remain out of service during freezing weather.
- Drain condensate lines when boiler is to be exposed to freezing temperatures.

**WARNING**

Following service procedures must be performed by qualified service agent. Boiler owner shall not attempt these steps. Failure to do so could result in death or serious injury.

11.3 Annual Examination and Cleaning of Boiler Components

- Obtain Burner Inspection Kit. Follow kit instructions to prepare for examination and cleaning.
- Burner and heat exchanger inspection and cleaning.
  - Remove gasket and burner. Allow burner to clear top lip of chassis.
  - Remove any residual sleeve and/or gasket material from removed burner.
  - Clean burner using air hose directed into top of burner opening to dislodge any debris in burner ports. Inspect burner for foreign matter in flame ports or inside burner. Remove foreign matter by blowing with compressed air or vacuuming. Replace burner if it cannot be cleaned or is showing deterioration.
  - Clean heat exchanger with low pressure water spray. Use flexible handle nylon brush to loosen sediment and oxide on all accessible heating surfaces of heat exchanger. Take care not to get brush stuck in heat exchanger.
  - Remove any remaining loosened sediment using shop vacuum with snorkel attachment.
  - Clean condensate collector if significant debris found in heat exchanger.
  - Expand upper spring tension clip of condensate trap using hose clamp pliers. Disconnect condensate trap from condensate collector. See figure 9-1 page 33.
  - Disconnect wire harness from vent temperature sensor. See (15) figure 3-2 page 9.
11 - GENERAL MAINTENANCE AND CLEANING

11-3 Condensate Collector

- Loosen upper hose clamp securing condensate collector to flue pipe using 3/8" socket with 6" extension.
- Remove ¼-20 hex flange nuts securing condensate collector to heat exchanger using 7/16" deep well socket. See figure 11-3.
- Remove condensate collector assembly from heat exchanger and flue pipe.
- Flush collector and condensate trap with water.
- Follow Burner Inspection Kit instructions to reassemble boiler and resume operation.
12 - RATINGS AND CAPACITIES

12.1 Ratings and Capacities

- Constructed and hydrostatically tested for maximum allowable working pressure of 50 psig (pounds per square inch gauge) (345 kPa) in accordance with ASME Boiler and Pressure Vessel Code, Section IV, Rules for Construction of Heating Boilers.

- Ratings used for elevations up to 2000 ft (600m) above sea level.

- For elevations between 2000 ft (600m) and 4500 ft (1350m), install high altitude control kit.

- For elevations above 4500 ft (1350m) install high altitude control kit and:
  - USA - Reduce input rate 4% for each 1000 ft (300m) beyond 4500 ft.
  - Canada - Boiler derates input 10% for every 2000 feet (610 m) above an elevation of 4500 feet (1.37 km).

13 - TROUBLE SHOOTING

- Remove Top Jacket. Is User Interface Lit?
  - NO
  - YES

- External Power Switch ON?
  - NO
  - YES

- Turn ON power to Boiler. Is Power Light Lit?
  - YES
  - NO

- Check 120 Vac on Molex Connector on top of Lower Jacket is 120 Vac available?
  - YES
  - NO

- Replace Main Wire Harness.

- Replace Power Switch

- Check for 120 Vac Inside High Voltage Terminal Box. Is 120 Vac available?
  - YES
  - NO

- Check Circuit Breaker or Emergency Disconnect Switch and 120 Vac Wiring to Boiler. Fix or Repair External Wiring.

- Locate fuse holder on front of control and pull to check fuse. Spare fuse located on controller. Make sure all wire harness plugs are properly pushed in. Release plug lock with finger, remove and reconnect all 7 plugs. Check wiring from User Interface to Low Voltage Terminal Strip including checking continuity of the wires. Does User Interface Display work?
  - NO
  - YES

- Remove User Interface from base. Using Digital Voltmeter check for 25 to 30 Vdc. Is voltage present?
  - NO
  - YES

- Replace Control Module
- Replace User Interface

Lockout Alarm A 0 0
Blocking too long error

Enter Installer Menu, Boiler Status. Scroll to most recent Lockout Alarm or Blocking Error. Diagnose corrective action using appropriate Troubleshooting Tree.

Lockout Alarm A 0 5
GV relay error

Unplug connector on supply sensor. Measure continuity of high limit sensor (close/open signal) between two pins connected to two purple wires. Is continuity available?

Yes No

Is wire harness connected to both Gas Valve and J13 connector on Control Module?

Yes No

Disconnect J13 connector on Control Module. Measure resistance across third (blue wire) and fourth (brown wire) terminals. Is resistance between 1.0 and 1.2 kΩ?

Yes No

Replace Control Module

Disconnect harness from Gas Valve. Does each wire have continuity between Gas Valve and Control Module?

Yes No

Replace Gas Valve

Is supply pipe (copper pipe at top of boiler) hot?

Yes No

Replace Supply Sensor

Boiler has been dry fired. System has too much air. Close manual gas valve (shut off gas). Purge air from system, wait for system to cool.

Connect harness

Replace Harness
13 - TROUBLE SHOOTING

Is this a new boiler on first startup?

YES  NO

Is this boiler to run with propane gas?

YES  NO

Is the propane gas orifice properly installed?

NO  YES

Install propane Orifice

Enter the Installer Menu and place the boiler into test mode in high fire. Once the boiler starts, go to the boiler status screen and monitor the flame signal. Is the flame signal greater than 7.0uA when running on high fire?

YES  NO

Does the boiler ignite and stay running?

YES  NO

Reset the boiler by pressing the "Reset" button. When the boiler tries to ignite, is there a strong, consistent spark evident through the sight glass?

YES  NO

Disconnect the gas valve electrical harness and close the gas shutoff valve. With the ignition lead connected to the igniter, hold the tip near the chassis ground and attempt ignition. Is a spark observed between the igniter and ground?

NO  YES

Remove the gas train including the flue transition. Remove the burner and inspect. Any sign of damage to burner surface?

YES  NO

Inspect the flue way along the sides of the baffle near the coil for blockages. Is there any apparent debris or obstruction of the flue way?

Connect all wires including the igniter and flame sensor leads. Check for proper and tight connections to control board. Are all wires connected?

YES  NO

Open gas shutoff valves

Inspect Vent System for blockages. Is the vent system clear?

YES  NO

Clear vent blockage

Check vent termination for proper consideration of wind effects

Replace/clean flame sensor or igniter

Replace Control Module

Replace Burner

Refer to the Heat Exchanger cleaning section

Refer to the Gas Valve Troubleshooting Tree
Error shows when safety circuit is open. Remove J13 connector from control module. Check for continuity between two pins connected to two pink wires, is continuity available?

**YES**

Replace Control Module

**NO**

Unplug molex connector on supply temperature sensor. Check continuity between two pins on sensor (two pins connected to two pink wires). Is continuity available?

**YES**

**NO**

Check for loose connections on two pink wires on J13 connector, supply sensor, and safety temperature switch.

**YES**

Fix Loose Connections

**NO**

Replace Wire Harness

---

Boiler fired without enough water flow through heat exchanger. Heat exchanger is over heated. Either high limit or heat exchanger temperature switch is open.

Check the following:
- Air in system?
- Verify water flow in system piping
- Flush system if water is dirty.

---

Is boiler supply pipe (above heat exchanger) hot?

**YES**

Let all zones run until water temperature drops.

**NO**

Wait for boiler to cool down.

---

Is Heat Exchanger surface hot?

**YES**

Check high limit and surface temperature switches.

**NO**

Replace Broken Switch
13 - TROUBLE SHOOTING

[Diagram showing troubleshooting steps for Lockout Alarm, Fan error, and various checks related to combustion air blower operations, including connectivity and voltage measurements.]
Disconnect harness from High Temperature Supply Switch and Control Module J13.
Check continuity of both purple wires. Continuity available for both purple wires?

Replace Flame Sensor or harness
Block Error  E 3 6  
Low Water Cutoff

Check Low Water Cutoff. Is amber lamp lit?

YES  NO

Repair System Piping, remove any remaining air in system.

Is harness plugged into Control Module J16?

YES  NO

Insert Harness

Disconnect harness from Low Water Cutoff and Control Module J16. Check continuity if harness. Harness OK?

YES  NO

Replace Low Water Cutoff  Replace Harness

Check Low Water Cutoff. Is Green Power Lamp lit?

YES  NO

Is Harness plugged into Low Water Cutoff? Is Blue/Yellow Harness plugged into 24 Vac Transformer? Is Black/White Harness plugged into 24 volt harness?

YES  NO

Insert Harness

Disconnect Blue/Yellow harness from Transformer. Using digital meter check for 24 Vac. Is 24 to 30 Vac present?

YES  NO

Connect harness to Transformer. Disconnect harness from Low Water Cutoff. Is 24 vac at terminals 1 & 2 (Between blue and yellow wires)?

YES  NO

Disconnect Black/White Harness from Transformer. Is 120 Vac measured at Harness?

YES  NO

Replace Main Harness

Replace Transformer
Read flue gas temperature on User Interface. Is temperature higher than 200°F?

- **YES**
  - Boiler is over fired. Wait for boiler to cool. Fix flow rate problem if any, purging all air out of the system.

- **NO**
  - Use thermal couple to measure flue gas temperature through sampling port. Is the measured temperature and flue temperature reading on User Interface significantly different?
    - **YES**
      - Replace Flue Gas Sensor
    - **NO**
      - Replace Control Module
**Blocking Error E 4 0**

**Return Temp**

Is correct harness connected to return sensor (2 Brown Wires)?

| YES | NO |

Unplug molex connector on return sensor. Is there moisture or liquid on metal pins? Liquid might be water or antifreeze solution.

| YES | NO |

Remove all liquid from connector. Check for leaks. Repair all leaks.

Correct wiring

---

**Blocking Error E 4 4**

**Phase error**

Measure incoming power with volt meter. Is terminal 120 VAC (L) approximately 120 VAC? Is 120 VAC (N) approximately 0 VAC?

| YES | NO |

Verify order of pins on J2. Pin order should be: empty, black (or red), white, green. Measure volts on pins of black wire and white wire. Is wiring/pins in right order? Does black/wire have 120 VAC? Does white wire/pin have 0 VAC?

Correct power supply to Boiler

---

**P - P**

Replace Control Module

Replace Return Water Sensor

---

Replace Control Module

Replace Wire Harness

14 - WIRING DIAGRAM

14.1 Connection Diagram
14.2 Schematic Diagram of Ladder Form
15 - GLOSSARY

- **ANSI** - American National Standards Institute, Inc. oversees creation and maintenance of voluntary consensus standards, including ANSI Z21.13/CSA 4.9: Gas-Fired Low Pressure Steam and Hot Water Boilers.

- **ASTM** - American Society for Testing and Materials. ASTM International is one of largest voluntary standards development organizations in world trusted source for technical standards for materials, products, systems, and services. Known for their high technical quality and market relevancy, ASTM International standards have important role in information infrastructure that guides design, manufacturing and trade in the global economy.

- **AUTHORITY HAVING JURISDICTION** - Individual or organization adopting and enforcing codes, rules, and by-laws governing various concerns of community. Commonly referred to as "final authority" for any matters relating to LIFE SAFETY and BUILDING CONSTRUCTION within a community.

- **Btu** - Abbreviation for British Thermal Unit. Quantity of heat required to raise temperature of 1 pound of water 1°F.

- **BURNER** - Device for final conveyance of gas or mixture of gas and air, to combustion zone.

- **COMBUSTION** - Rapid oxidation of fuel gases accompanied by production of heat and light. Complete combustion of fuel is possible only in presence of adequate supply of oxygen.

- **COMBUSTIBLE MATERIAL** - Materials made of or surfaced with wood, compressed paper, plant fibers, or other materials capable of being ignited and burned. Such material shall be considered combustible even though flame-proofed, fire-retardant treated, or plastered.

- **CONDENSATE** - Liquid separated from flue gas due to reduction in temperature.

- **DIRECT VENT BOILER** - Boiler constructed and installed so all combustion air is derived directly from outdoors and all vent gases are discharged to outdoors.

- **DRAFT** - Pressure difference causes gases or air to flow through a chimney, vent, flue or appliance.

- **FLA** - Full load amps.

- **FLUE GASES** - Products of combustion plus excess air in appliance flues or heat exchanger.

- **GAS PIPE SIZES** - Table 14

- **HIGH-VOLTAGE** - Circuit involving potential of not more than 600 volts and having circuit characteristics in excess of those of low-voltage circuit.

- **IGNITER** - Device utilizing electrical energy to ignite gas at main burner.

- **LEAK CHECK** - Operation performed on gas piping system to verify system does not leak.

- **LOW WATER CUTOFF** - Device constructed to automatically cut off fuel supply when surface of water in boiler falls to lowest safe water level.

- **LOW-VOLTAGE** - Circuit involving potential of not more than 30 volts.

- **METRIC GAS METERS**

  \[
  MBH = \frac{127,116 \times \text{cu meters}}{\text{Seconds}}
  \]

  For example: Gas Meter measures 0.1 cubic Meters in 100 seconds

  \[
  MBH = \frac{127,116 \times 0.1}{100} = 127 MBH
  \]

- **PRESSURE TEST** - Operation performed to verify gas tight integrity of gas piping following its installation or modification.

- **PURGE** - To free gas conduit of air or gas, or mixture of gas and air.

- **PURGE TIME** - Period of time intended to allow for dissipation of any unburned gas or residual products of combustion.
15 - GLOSSARY

• QUALIFIED AGENCY - Any individual, firm, corporation, or company engaged in and responsible for:
  • Installation, testing, or replacement of gas piping, or connection, installation, testing, repair or servicing of appliances and equipment.
  • Experienced in such work.
  • Familiar with all precautions required.
  • Complies with all requirements of authority having jurisdiction.

• SAFETY RELIEF VALVE - Valve designed to relieve pressure in hot water supply system when pressure exceeds pressure capability of equipment.

• SAFETY SHUTOFF DEVICE - Device that will shut off gas supply to controlled burner in event source of ignition fails.

• SEDIMENT TRAP - Gas piping arrangement designed to collect any liquid or solid contaminant before reaching gas valve.

• VENT - Passageway used to convey flue gases from appliance vent connector to outdoors.

• VENTING SYSTEM - Continuous open passageway from of appliance vent connector to outdoors for purpose of removing flue or vent gases.
1.1 Introduction
The boiler is equipped with a programmable electronic control and user interface module.

*APPENDIX A - CONTROL MODULE*
Boiler Status

User Interface Display | Explanation
--- | ---
**Installer Menu** | Control module logs successful and failed ignition attempts. Information accessed in 'Ignition Attempts' Screen as shown. Ignition attempts are stored in non-volatile memory and are retained in event of power failure.

*Figure A-1 Typical Ignition Cycle*

Following control features are implemented to ensure safe and reliable operation of Combustion System:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>False Flame Detection</strong></td>
<td>If flame is detected at end of pre-spark period (Ignit_0) than lockout will occur.</td>
</tr>
<tr>
<td><strong>Re-ignition</strong></td>
<td>If at end of safety period no flame detected control will go to post-purge removing unburned gas. Re-ignition attempt started following same cycle. Number of re-ignition attempts limited to 3 after which lockout occurs.</td>
</tr>
<tr>
<td><strong>Intermittent Operation</strong></td>
<td>Boiler can be firing continuously for 24 hours. Burner switched off and restart sequence follows.</td>
</tr>
<tr>
<td><strong>Flame out too late</strong></td>
<td>If flame detected after post purge lockout follows.</td>
</tr>
<tr>
<td><strong>Safety relay test</strong></td>
<td>In Safety ON/OFF state correct operation of safety relay is proved before ignition.</td>
</tr>
<tr>
<td><strong>UL3563 High Limit Temperature Device</strong></td>
<td>Boiler comes equipped with UL353 approved temperature high limit device. Gas Valve de-energized when supply temperature exceeds 203°F lockout follows.</td>
</tr>
<tr>
<td>User Interface Display</td>
<td>Explanation</td>
</tr>
<tr>
<td>-----------------------</td>

</tr>
<tr>
<td><strong>BOILER CONFIG</strong></td>
<td></td>
</tr>
<tr>
<td>Low Water Cutoff</td>
<td>Boiler incorporates integrated Low Water Cutoff device (LWCO) that disables boiler when low water condition exists. LWCO device located at high point of internal Heat Exchanger loop to detect low water condition. Detection of low water condition will result in blocking error; boiler will automatically resume normal operation when proper water level returns. Refer to Troubleshooting Guide.</td>
</tr>
<tr>
<td>Disabled</td>
<td>LWCO device can be disabled for diagnostic purposes or where applicable code permits.</td>
</tr>
</tbody>
</table>
## User Interface Display

<table>
<thead>
<tr>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Two pump modes are available:</td>
</tr>
<tr>
<td><strong>1. Pump Mode = 0 ‘CH or CH&amp;DHW’</strong></td>
</tr>
<tr>
<td>• In this mode either CH or DHW pump terminal is energized depending on type of demand (CH or DHW).</td>
</tr>
<tr>
<td>• CH and DHW pumps are never energized at the same time.</td>
</tr>
<tr>
<td>• In the case of simultaneous call for both CH and DHW, the energized pump depends on whether the boiler is currently supplying CH or DHW demand. Refer to DHW Priority settings below.</td>
</tr>
<tr>
<td>• This is typical of hydronic system design with separate CH and DHW Pumps.</td>
</tr>
<tr>
<td><strong>2. Pump Mode = 4 ‘System Pump’</strong></td>
</tr>
<tr>
<td>• In this mode only one external system pump is installed in hydronic system. This pump will energize independent of type of demand (CH or DHW).</td>
</tr>
<tr>
<td>• Connect this pump to CH/System Pump electrical terminal block. See page 35 for diagram.</td>
</tr>
<tr>
<td>• DHW pump terminal does not function.</td>
</tr>
<tr>
<td>• This is typical of hydronic system design which utilizes zone valves for all CH zones and DHW indirect tank.</td>
</tr>
</tbody>
</table>

### Note:
- Pump Mode selection depends on electrical and hydronic system design. Please refer to sections 5 and 8 for recommended hydronic piping and electrical configurations.
- Internal heat exchanger pump is energized anytime demand exists regardless of Pump Mode setting or type of demand (CH or DHW).

## Service Reminder

'Service Reminder' feature allows the installer to enable or disable a service reminder notification on the User Interface at a predefined interval.

Service reminder does not affect operation of boiler in any way. It is only a reminder to End User that routine preventative maintenance is required by qualified service technician.

Allowed Range: 1 to 999 days
### User Interface Display

| CH Settings
| --- |
| | **CH SETTINGS**
| | **CH mode**
| | **MODE : 1**
| | **CH with thermostat**

### Explanation

4. Central Heating (CH) modes available:

- **CH Mode = 0 'CH with Thermostat’**
  - Boiler will attempt to satisfy CH demand while CH thermostat input is closed.
  - Boiler will modulate its firing rate to maintain CH set point and match system heat load.
  - CH set point adjusted in ‘Settings’ submenu under ‘User Menu’

- **CH Mode = 1 'CH with Thermostat and Outdoor Reset’**
  - Boiler will attempt to satisfy CH demand when CH thermostat input is closed.
  - Boiler will modulate its firing rate to maintain CH set point and match system heat load.
  - CH set point calculated as function of outdoor temperature using outdoor reset curve. See figure A-2

- **CH Mode = 2 'CH with Full Outdoor Reset’**
  - CH demand is determined by outdoor temperature and Warm Weather Shutdown temperature.
  - Boiler will permanently attempt to satisfy CH demand, when CH demand is available.
  - CH thermostat input is ignored.
  - CH set point calculated as function of outdoor temperature using outdoor reset curve. See figure A-2

- **CH Mode = 3 'CH with Permanent Demand’**
  - CH demand is permanently on.
  - Boiler will permanently attempt to satisfy CH demand.
  - CH thermostat input is ignored.
  - CH set point is adjusted in ‘Settings’ submenu under ‘User Menu’

**Note:**

- Once CH demand is satisfied (i.e. CH thermostat opens or boiler determines its minimum firing rate exceeds system heating load):
  - Burner shuts off, boiler enters post purge.
  - CH pump continues to run for 30 seconds.
  - Control will wait until Anti-cycle time of 180 seconds elapses before boiler fires again. Prevents short-cycling.
  - The internal heat exchanger pump is energized anytime demand exists regardless of Pump Mode setting or type of demand (CH or DHW).

### Note:
- Modes only function when outdoor temperature sensor connected.
- If ‘Open’ outdoor sensor detected CH set point equal to ‘Boiler Reset Curve Design’ temperature.
- Outdoor temperature used for CH set point calculation measured once a minute and averaged with previous measurement to compensate for rapid outdoor temperature variations.

### Figure A-2 Outdoor Reset Curve
Calculated supply temperature follows thick black line in graph above based on outdoor temperature.

![Figure A-2 Outdoor Reset Curve](image)

- **Note:**
  - If CH Mode = 1, 'Outdoor Temperature Reset with Thermostat' or 2, 'Full Outdoor Reset' boiler will adjust CH set point proportional to outdoor temperature as defined by Outdoor Reset Curve below.
  - Outdoor reset curve adjusted by modifying Design and Mild Weather reference temperatures. See points A & B of Reset Curve below.
  - Calculated CH set point always limited between 'Reset Curve Boiler Minimum/Maximum' temperatures. See points C & D of Reset Curve below.

<tr>
<td><strong>MAXIMUM POWER CH</strong></td>
<td><img src="https://via.placeholder.com/150" alt="Image" /></td>
<td>Maximum boiler power in CH mode limited by adjusting ‘Maximum Power CH’ setting. Boiler will not exceed this value while operating in CH Mode. Allowable Range: 1..100% Default Setting: 100%</td>
</tr>
</tbody>
</table>

**DHW Settings**

Two DHW modes are available
- **DHW Mode = 0 'No DHW**
  - DHW Mode is disabled
  - The DHW thermostat input is ignored and the DHW pump is not used.
- **DHW Mode = 2 'DHW Store with Thermostat’**
  - Boiler reacts to DHW demand when DHW thermostat input closes.
  - Boiler modulates to meet DHW demand similar to CH Mode except DHW set point is used. DHW set point set in Settings’ submenu found in ‘User Menu’.
  - Simultaneous CH & DHW demands handled using DHW Priority Timing. See ‘DHW Maximum Priority Time’ setting below.

**Note:**
- Outdoor reset function disabled while operating in DHW Mode.
- Typical when using a DHW indirect storage tank.
- After DHW demand satisfied, boiler enters post purge mode and DHW pump continues to run for 15 seconds.
## User Interface Display

<table>

<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DHW SETTINGS</strong></td>
<td>Maximum time boiler operates in DHW mode limited by DHW Maximum Priority Time Setting.</td>
</tr>
<tr>
<td><strong>DHW max. priority time</strong></td>
<td>Priority timer starts when both CH and DHW demand is present. Boiler will switch from DHW back to CH operation after Maximum Priority Time has elapsed.</td>
</tr>
<tr>
<td><strong>30 min</strong></td>
<td>CH demand then has priority until Maximum Priority Time has elapsed.</td>
</tr>
<tr>
<td><strong>30 min</strong></td>
<td>Process repeats until either CH or DHW demand satisfied.</td>
</tr>
</tbody>
</table>

**Allowed Range:** 1 to 60 Minutes  
**Default Setting:** 30 Minutes

<table>
<thead>
<tr>
<th>System Test</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SYSTEM TEST</strong></td>
<td>System test can be activated via installer menu for testing system at fixed power rates.</td>
</tr>
<tr>
<td><strong>Set test power</strong></td>
<td>Boiler can be started without CH or DHW demand being present. System Test has priority over any system demand while test mode activated.</td>
</tr>
<tr>
<td><strong>Off</strong></td>
<td>System test mode automatically ends after 30 minutes boiler resumes normal operation.</td>
</tr>
</tbody>
</table>

**The following modes are available:**
- Disabled
- Low power - Burner starts. After ignition period has finished the burner stays at low power
- Ignition power - Burner starts. Stays at ignition power
- High power - Burner starts. After ignition period has finished burner stays at high power.

**Note:**
- Before running system test modes, check if hydronic system capable of dissipating heat.
- Both heat exchanger and CH pumps are activated during system test.
- During System Test Mode, boiler will run at fixed power rates until supply water temperature is 93°C/195°F
- All other safety functions remain active while in System Test Mode.
IMPORTANT

In accordance with Section 325 (f) (3) of the Energy Policy and Conservation Act, this boiler is equipped with a feature that saves energy by reducing the boiler water temperature as the heating load decreases. This feature is equipped with an override which is provided primarily to permit the use of an external energy management system that serves the same function.

THIS OVERRIDE MUST NOT BE USED UNLESS AT LEAST ONE OF THE FOLLOWING CONDITIONS IS TRUE:

- An external energy management system is installed that reduces the boiler water temperature as the heating load decreases.
- This boiler is not used for any space heating
- This boiler is part of a modular or multiple boiler system having a total input of 300,000 BTU/hr or greater.
- This boiler is equipped with a tankless coil.
