* Boiler provided with 50 psig (206 kpa) safety relief valve. Field source safety relief valve if system pressure greater than 40 psig.

** Boiler provided with 75 psig temperature pressure gauge. Field source temperature pressure gauge if system pressure greater than 60 psig.

If optional equipment is ordered with this boiler, verify options ordered are included with your boiler. Options may include Pump and or Aquastat kit.

OPTIONAL USER INTERFACE RELOCATION .................................................................. 79
PRIMARY LOOP EQUIVALENT LENGTH CALCULATIONS & PUMP SELECTION ............... 80-81
1.1 **Designated Use**
- Hot water heating boiler.
- Indoor installation.
- Closet or alcove installation.
- Direct vent or single vent pipe boiler.
- For use with natural gas or liquefied petroleum gases (LP/propane).

1.2 **The unit MUST NOT:**
- Directly heat potable water. Indirect heating is acceptable.
- Heat water with non-hydronic heating system chemicals present (example, swimming pool water).
- Exceed 150 psig (1.03 MPa) maximum allowable working pressure.
- Exceed 195°F (90.5°C) system design temperature.

1.3 **Operational Features**
- Modulating: 20-100%.
- Integral Dual Temperature Limit.
- CSD-1 Compliant - listing based on manufacturer's interpretation of CSD-1 requirements. Consult authority having jurisdiction prior to installation.
  - Manual reset low water cutoff
  - Manual reset high temperature limit
- Outdoor Temperature Reset Available.
- Heat exchanger over heat protection.
- Alternate mounting of User Interface Available

Check our website frequently for updates: www.ecrinternational.com

*Information and specifications outlined in this manual in effect at the time of printing of this manual. ECR International, Inc. reserves the right to discontinue, change specifications or system design at any time without notice and without incurring any obligation, whatsoever.*
2 - IMPORTANT SAFETY INFORMATION

2.1 General
Boiler installation shall be completed by qualified agency. See glossary for additional information.

**WARNING**
Fire, explosion, asphyxiation and electrical shock hazard. Improper installation could result in death or serious injury. Read this manual and understand all requirements before beginning installation.

2.2 Become familiar with symbols identifying potential hazards.

! This is the safety alert symbol. Symbol alerts you to potential personal injury hazards. Obey all safety messages following this symbol to avoid possible injury or death.

**DANGER**
Indicates a hazardous situation which, if not avoided, WILL result in death or serious injury.

**WARNING**
Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION**
Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

**NOTICE**
Used to address practices not related to personal injury.

2.3 Installation shall conform to requirements of authority having jurisdiction or in absence of such requirements:
- United States
  - National Electrical Code, NFPA 70.
- Canada
  - Natural Gas and Propane Installation Code, CAN/CSA B149.1.
  - Canadian Electrical Code, Part I, Safety Standard for Electrical Installations, CSA C22.1

2.4 Where required by authority having jurisdiction, installation shall conform to Standard for Controls and Safety Devices for Automatically Fired Boilers, ANSI/ASME CSD-1.
Additional manual reset low water cutoff may be required.

2.5 Requirements for Commonwealth of Massachusetts:
Boiler installation must conform to Commonwealth of Massachusetts code 248 CMR which includes but is not limited to:
- Installation by licensed plumber or gas fitter.
FIGURE 3-1  Boiler Components (Viewed from Left side of Boiler)

- Component List:
  - Supply Water To Heating System (21)
  - Safety Relief Valve (37)
  - Controls Tree (19)
  - Combustion Air Inlet (1)
  - Vent Connector (2)
  - Return Water From Heating System (4)
  - Temperature Pressure Gauge (24)
  - Gas Supply (3)
  - Limit Control (Optional) (22)
  - User Interface (25)

NOTE:
See Section 5-3 For Safety Relief Valve Piping Instructions

FIGURE 3-2  Jacket Removal (Viewed from Left Side of Boiler)

- Disengage jacket latches on both sides of boiler.
- Lift jacket up and off support at bottom of jacket and remove.
3.1 Component Listing - Refer to diagrams on following pages.

1. **Combustion Air Inlet (4")** See section 6.
2. **Vent Connector (4")** See section 6.
3. **Gas Supply** (1" NPT)
4. **Return Water From Heating System - In, (1½" NPT)** See section 5.
5. **Gas Shutoff Valve** Fuel supply isolation during servicing. See section 7.
6. **Gas (Control) Valve** Delivers proper quantity of fuel to Combustion Air Blower. (Not shown) See section 7.
7. **Igniter**
8. **Flame Sensor**
9. **High Voltage Junction Box** For connection of 120V components. See section 8.
10. **10 Amp Breaker**
11. **Low Voltage Terminal Strip** Connection of all low voltage wiring, including thermostat.
12. **Wire Knockouts**
13. **Boiler Control Module with Spare Fuse**
14. **Heat Exchanger Surface Temperature Switch (located behind control panel)**
15. **Vent Temperature Sensor**
16. **Condensate Drain Right or Left Option** Condensate must be piped to appropriate drain. See section 6.
17. **Drain Valve**
18. **Condensate Trap - Right or Left Option** Boiler produces a liquid (condensate) as a by-product of combustion. (See page 33)
19. **Control Tee (Field installed)**
20. **Low Water Cutoff (LWCO)**
22. **Manual Reset Secondary Temperature Limit Control** (Optional Field Installed)
23. **Optional Air Filter**
24. **Temperature Pressure Gauge** (Field Installed)
25. **User Interface** - Displays information regarding boiler condition. Allows adjustment of boiler operating parameters. **NOTE:** Does not replace thermostat used to control central heating space.
26. **Supply Water Temperature Sensor**
27. **Combustion Air Blower** Delivers proper quantity of combustion air, receives fuel from gas valve, mixes air and fuel sending mixture to burner for combustion
28. **Sight Glass** - Permits observation of burner flame.
29. **Heat Exchanger Strap and Buckle** (2)
30. **Transformer**
31. **DHW Pump, General Boiler Pump, CH Pump and Blower Relays**
32. **Heat Exchanger**
33. **ASME Plate**
34. **Flue Collector**
35. **Return Water Temperature Sensor**
36. **Leveling Feet** (4)
37. **Safety Relief Valve** Factory supplied, Field installed. See section 5.
38. **Burner** not shown (see page 3)
39. **Spare Fuse** not shown (see page 3)
40. **Flue Gas Test Port**
41. **Combustion Air Test Port**
**FIGURE 3-3** Boiler Components 399 MBH (View from Front of Boiler) As seen on front cover

37. Condensate Trap
38. Leveling Feet (4)
4.1 Boiler Location Considerations

- Ambient room temperature always above 32°F (0°C) to prevent freezing of liquid condensate.
- Approved for installation in closets and on combustible floors. Do not install boiler on carpeting.
- Protect gas ignition system components from water (dripping, spraying, rain, etc.) during operation and service (circulator replacement, condensate trap, control replacement, etc.).
- Locate boiler on level, solid base as near outside vent wall as possible and centrally located with respect to heat distribution system as practical.
- Determine alternate User Interface mounting location if desired. See page 81 - Optional User Interface Relocation.
- Access to outdoors to meet minimum and maximum pipe lengths for combustion air and vent piping. See section 6.
- Disposal of condensate. See section 6.
- Drainage of water (or water - antifreeze solution) during boiler service or from safety relief valve discharge. See section 5.
- Access to system water piping, gas supply, and electrical service. See sections 5, 7 and 8.
- Clearances to combustible materials and service clearances. See Table 2 and figure 4-1.
- Multiple Boilers can be placed side by side, or back to back.

**WARNING**

Fire hazard. Do not install boiler on carpeting. Failure to follow these instructions could result in death or serious injury.

</tr>
</tbody>
</table>

(1) Required distances measured from boiler jacket.
(2) Service clearance recommendation.
5.1 General

• Install piping in accordance with authority having jurisdiction.

**NOTICE**

Use two (2) wrenches when tightening boiler’s fitting and pipes. Boiler’s internal piping can be damaged if subjected to excessive torque.

• Support system piping and safety relief valve discharge piping. Boiler’s internal piping can be damaged if subjected to excessive weight.
• Size central heating pump (and domestic hot water pump, if used) for system requirements only.
• Thoroughly clean and flush system before connecting to boiler.
• If oil is present in system water, use approved detergent to wash system.
• Flush system to remove any solid objects such as metal chips, fibers, or Teflon tape, etc.

5.2 Special Conditions

• System piping exposed to freezing conditions: Use inhibited propylene glycol solutions certified by fluid manufacturer for use with closed water heating system. Do not use automotive or ethylene glycol.
• Boiler used in connection with refrigeration system. Install piping in parallel with boiler, with appropriate valves to prevent chilled medium from entering boiler.
• System piping connected to heating coils located in air handling unit exposed to refrigerated air circulation. Install flow control valves or other automatic means to prevent gravity circulation of boiler water during cooling cycle.

5.3 Safety Relief Valve

**NOTICE**

Boiler rated at 150 psig (1.03 MPa) maximum allowable working pressure. Boiler provided with 50 psig (345 kPa) safety relief valve. Field source safety relief valve for system pressures greater than 25 psig. Temperature Pressure Gauge satisfactory for 60 psig operation. Field source temperature pressure gauge for system pressures greater than 60 psig.

• Install safety relief valve. See figure 5-1
• Install safety relief valve with spindle in vertical position.
• Do not install shutoff valve between boiler and safety relief valve.
• Install discharge piping from safety relief valve. See figure 5-2.
• Use ¾” or larger pipe.

**WARNING**

• Poison hazard. Ethylene glycol is toxic. Do not use ethylene glycol.
• Never use automotive or standard glycol antifreeze, even ethylene glycol made for hydronic systems.
• Ethylene glycol can attack gaskets and seals used in hydronic systems.
• Use only inhibited propylene glycol solutions certified by fluid manufacturer as acceptable for use with closed water heating system.
• Thoroughly clean and flush any system that used glycol before installing new Boiler.
• Provide user with Material Safety Data Sheet (MSDS) on fluid used.

**NOTICE**

Do not expose boiler and condensate piping to freezing temperatures.

**FIGURE 5-1 Safety Relief Valve** (Viewed from top, left side of boiler)

Bushing ¼” x ¼”

Controls Tree

1¼” Close Nipple

* Included in optional accessory kit.

Position Safety Relief Valve to provide space for discharge piping.
5.4 Low Water Cutoff (LWCO) and Aquastat
- Unit shipped with LWCO installed.
- Optional manual reset Hi limit if required, connect wires and remove factory jumper to terminal strip. Maximum limit setting is 190°F (88°C). Use thermal grease.

5.5 Trim Piping
- Temperature - Pressure Gauge. Install temperature pressure gauge using bushings provided with boiler. See Figure 5-1 and 5-3.
- Protect chassis grommets from heat damage.

5.6 System Piping
- See Table 3 for basic system piping configurations.
- See Table 3 for general boiler pump sizing requirements.
- Systems with automatic fill valves require back flow prevention device.
- Single boiler system. See Figure 5-5 through 5-7 for general guidance. Additional considerations:
  - Boiler control is designed for single central heating pump. Installer responsible for integration of multiple central heating pumps.
  - Boiler control allows domestic hot water prioritization. Function could be lost if central heating pump not directly connected to control system.
- Multiple boiler system. See Figure 5-8A, B & C for general guidance. Additional considerations:
  - Control system requires equivalent water temperatures entering each boiler to properly sequence and adjust system supply temperature.
  - Install multi boiler sensor kit. See "Parts, Kits & Optional Accessories" manual for part number.
  - *Boiler control provides integrated manual reset high limit as primary limit control. Optional Aquastat Kit is for those jurisdictions with this requirement. See figure 5-3.
**Notice**

Illustrations are meant to show system piping concept only. Installer is responsible for all equipment and detailing required by authority having jurisdiction.

**Notice**

Arrange piping to prevent water dripping onto boiler.

See Table 3 for primary general pump sizing. Primary circuit pipe components must also be included to size pump.

Up to 16 boilers
6 - COMBUSTION AIR AND VENT PIPING

6.1 General
This boiler requires a dedicated direct vent system. Install combustion air and vent piping in accordance with these instructions, authority having jurisdiction, and:
- Canada - Natural Gas and Propane Installation Code, CAN/CSA B149.1

Vent connections serving appliances vented by natural draft shall not be connected into any portion of mechanical draft systems operating under positive pressure.
Install vent system in accordance with these instructions. This boiler is not approved for common venting.

6.2 Removal of Existing Boiler From Common Vent System
When existing boiler is removed from common venting system, common venting system is likely to be too large for proper venting of appliances remaining connected to it.
After removal of existing boiler, following steps shall be followed with each appliance remaining connected to common venting system placed in operation, while other appliances remaining connected to common venting system are not in operation:
- Seal any unused openings in common venting system.
- Visually inspect venting system for proper size and horizontal pitch. Determine there is no blockage or restrictions, leakage, corrosion and other deficiencies which could cause an unsafe condition.
- When practical, close all building doors, windows, and all doors between space in which appliances remaining connected to common venting system are located and other spaces of building. Turn on clothes dryer and any appliance not connected to common venting system. Turn on exhaust fans, such as range hoods and bathroom exhaust so they will operate at maximum speed. Do not operate summer exhaust fan. Close fireplace dampers.
- Turn on appliance being inspected. Follow lighting instructions. Adjust thermostat so appliances will operate continuously.
- Test for spillage at draft hood relief opening after 5 minutes of main burner operation. Use flame of match or candle, smoke from cigarette, cigar or pipe.
- Determine each appliance remaining connected to common venting system properly vents when tested as outlined above. Then return doors, windows, exhaust fans and any other gas-burning appliance to their previous condition of use.
- Any improper operation of common venting system should be corrected so installation conforms with National Fuel Code, ANSI Z223.1/NFPA 54 and/or Natural Gas and Propane Installation Code, CAN/CSA B149.1.

6.3 Venting Materials
- See Table 4

| Table 4 - Combustion air and vent pipe fittings must conform with the following: |
|-----------------------------|-----------------|---------------------|
| Item                       | Material        | Standards           |
| Vent Pipe and Fittings      | PVC schedule 40 | ANSI/ASTM D1785     |
|                            | PVC - DWV       | ANSI/ASTM D2665     |
|                            | CPVC schedule 40| ANSI/ASTM D1784/F441|
|                            | SDR-21 & SDR-26 PVC | ANSI/ASTM D2241   |
|                            | ABS-DWV         | ANSI/ASTM D2661     |
|                            | Schedule 40ABS  | ANSI/ASTM F628      |
|                            | PP (Polypropylene) | UL 1738 UL S636-08 |

Pipe Cement/Primer
- PVC          | ANSI/ASTM D2564 |
- CPVC         | ANSI/ASTM F493  |
- Schedule 40 ABS | ANSI/ASTM D2235 |

- IPEX is approved vent manufacturer in Canada listed to ULC-S636.
- IPEX System 636 Cements and Primers are approved in Canada listed to ULC-S636.

Use of cellular core PVC (ASTM F891), cellular core CPVC, or Radel® (Polyphenolsulfone) in venting systems shall be prohibited.

⚠️ WARNING
Use of cellular core PVC for venting flue gas could result in death, or serious injury.

⚠️ WARNING
Covering non-metallic vent pipe and fittings with thermal insulation shall be prohibited.
6.4 Vent Pipe Installation

- Minimum and maximum combustion air and vent pipe lengths listed in Table 5. Pipe length counted from combustion air connector to termination.

- 90° elbows equivalent to 5.0 ft (1.6 m). 45° elbows equivalent to 3.5 ft (1.1 m).

- Use flexible Polypropylene piping (PP) in a vertical position only. Check PP pipe manufacturer for details. Each foot of PP flexible pipe is equivalent to 2½ feet of smooth pipe of same diameter.

- Slope vent pipes minimum 1/4" per foot (21 mm/m) back toward boiler. Support horizontal sections to prevent sags capable of accumulating condensate.

- Support piping in accordance with pipe manufacturer's instruction and authority having jurisdiction. In absence of manufacturer's instruction use pipe hooks, pipe straps, brackets, or hangers of adequate and strength located at intervals of 4 ft (1.2m) or less. Allow for expansion/contraction of pipe.

- Combustion air and vent piping must be air tight and water tight.

- Certified vent system components must NOT be interchanged with other vent systems or unlisted pipe/fitting.

- Canadian installations only. All venting material, primer and glue must be listed to ULC S636.

- Canadian installations only. First 3 ft (0.9 m) of plastic vent pipe from vent connector must be readily accessible for visual inspection.

6.5 Vent Termination

- Terminate combustion air and vent pipes with fittings or concentric vent kit.
  A. See "Parts, Kits and Optional Accessories" manual for concentric vent kit part numbers.
  B. Use horizontal pipe for vent and 90° elbow for combustion air termination when using fittings.

- Separate vent terminal from air inlet terminal to prevent flue gas recirculation. If T-Terminal is used on flue pipe at sidewall, air inlet terminal shall be at least 36" or more away from vent terminal.

- Locate combustion air termination as far as possible from swimming pool, swimming pool pump house, and other sources of airborne chlorine.

- Locate combustion air and vent terminals as required by authority having jurisdiction.

Table 5 - Combustion Air and Vent Piping Length

<table>
<thead>
<tr>

WARNING
Vent extending through exterior wall shall not terminate adjacent to wall or below building extensions such as eaves, balconies, parapets or decks. Failure to comply could result in death or serious injury.
6.6 Venting Configurations

Various venting configurations can be applied to this boiler. For guidance see Venting Configuration Table 7A and corresponding Figure.

**NOTICE**

Use of vent covers may cause freezing. If using vent covers overall vent length must be considered. Failure to heed this information may compromise operation of this boiler.

6 - COMBUSTION AIR AND VENT PIPING

**FIGURE 6-1 Two Pipe Roof Vent**

- 12" (205mm) Min. horizontal separation between combustion air intake and vent of same appliance.
- 12" (205mm) Min. 84" (2134mm) Max. vertical separation between combustion air intake and vent of different appliances.
- 15" (381mm) Max. horizontal length of vent.
- Min. vent/intake between different appliances 12" (305mm).
- Max. allowable total vertical vent length with outside exposure is 10 ft. (3.05m).
- Abandoned unused masonry chimney may be used as chaseway for combustion air and vent. Both combustion air and vent pipe must exit above top of chimney with clearances as shown in figure 6-1.

**FIGURE 6-2 Two Pipe Side Wall Vent**

- 3" (76mm) Min. 24" (610mm) Max. horizontal separation is manufacturer recommended.
- 12" (305mm) Min. 24" (610mm) Max. separation between bottom of combustion air intake and bottom of vent.

**FIGURE 6-3 Two Pipe Side Wall Vent (Multiple Appliances)**

- 12" (305mm) Min. separation.Manufacturer recommends greater separation.
- Multiple terminations as shown in 6-1, and 6-3 must be a min. of 12" (305mm) horizontally between vent of one termination and air intake of next appliance. Manufacturer recommends greater separation.
- Max. allowable total outside exposure vent length equals 10 ft. (3.05m).
- Maintain a pitch of 1/2" per ft. (42mm/m) outside exposure back to boiler to ensure proper condensate drainage for horizontal runs.
**FIGURE 6-4 Side Wall Concentric Terminal**

Combustion Air

Vent

1" (25.4mm) Max.

**FIGURE 6-5 Side Wall Concentric Terminal Multiple Appliances**

Roof Overhang

36" (457mm) Min.

* See Note Below

**FIGURE 6-6 Concentric Terminal Connection**

4" (102mm) Diameter PVC intake/combustion air

Combustion Air

4" (102mm) Kit

**See Note**

1"(25.4mm) Maximum

Vent

Combustion Air

12" (305mm) US (18"(46cm) Canada) Clearance Above Highest Anticipated Snow Level Or Grade

24" (610mm) minimum Horizontal distance between end bells of each concentric terminal to prevent flue gas recirculation.

Note: Securing strap must be field installed to prevent movement of termination kit in side wall

** Note Overall length may be modified by cutting or extending both combustion air and vent pipes. 12" (305mm) is minimum allowable length and 60" (1.2m) is maximum allowable length for this dimension.

SDR-26 PVC (D2241) only may be used for extending pipes. Do not use Schedule 40 PVC or use couplings to extend pipes. Dimension will change if intake/vent pipes are lengthened or shortened.

4" (102mm) Diameter = 36" Length (0.9m)
Concentric Vent Roof Terminations

- Glue inner vent pipe to prevent recirculation.
- Maintain 12" (305mm) US (18"(457mm) Canada) minimum clearance above highest anticipated snow level. Maximum of 24"(610mm) above roof.
- Support must be field installed to secure termination kit to structure.
- Elbow, roof boot/flashing field supplied.
- Allowed Wall/Roof thickness 1/2"-30" (12.7mm - 762mm).
- Vertical concentric vent system can be installed in unused masonry chimney.
- Contact Technical Support 800-325-5479 for questions regarding installation or use.

Grade, Snow & Ice

Terminate vent system bottom, minimum 12" (305mm) above highest anticipated snow level.

Avoid locations where snow may drift and block vent and combustion air. Ice or snow may cause boiler to shut down if vent or combustion air becomes obstructed.

Doors & Windows

Combustion air and vent termination must be 12" (305mm) from or below doors, windows or gravity inlet.

* See Tables 4 & 5

Combustion air and Vent Piping Length Page 22.
NOTICE

Configurations of single pipe vent with flue on the sidewall, requires a tee as the vent terminal. See Figure 6-10 and 6-11.

**NOTICE**

If separation in Fig. 6-2 or Fig 6-12 is not large enough to prevent cross flow contamination between flue gas and fresh air use T-Terminal as shown in Fig. 6-14. Use of T-Terminal for vent as shown in Fig. 6-14 does not have a max. separation requirement between flue gas and fresh air.

**FIGURE 6-10 Flue on Sidewall, Combustion Air on Roof**

Maintain 12” (305mm) US (18” (457mm) Canada) clearance above highest anticipated snow level 24” (610mm) above roof.

1” (25.4mm) Max. Separation

Vent w/T-Terminal

**FIGURE 6-14 Side Wall Venting Terminal w/T-Terminal**

12” (305mm) Min. Separation of Combustion Air and Vent shall be maintained. No Maximum separation is required when using T-Terminal for vent.

See Snow & Ice Page 26
6.7 Side Venting Terminal Requirements of:

- Canada - Natural Gas and Propane Installation Code, CAN/CSA B149.1

| Venting terminal from doors and windows | See figure 6-12 |
| Venting terminal from forced air inlet of other appliances | See figure 6-13 |
| Venting terminal from snow level | See figure 6-14 |
| Venting terminal from vegetation | See figure 6-15 |
| Venting terminal from public walkway | See figure 6-16 |

**FIGURE 6-12**

Termination must be min. 12" (305mm) from or below doors, windows or gravity inlet. If boiler uses inside air min. 4' (1219 mm).

**Doors & Windows**
Combustion air and vent termination must be min.12" (305mm) from or below doors, windows or gravity inlet. If boiler uses inside air min. 4' (1219 mm).

**Condensate**
Vent gas may condense, forming moisture, may be corrosive. Protect building materials at vent from exhaust of vent gas.

**FIGURE 6-13**

Termination

**Forced Air Inlet**
Terminate venting system 3' (0.9m) above and 10' (3.0m) from any forced air inlet (except boiler’s combustion air inlet).

**FIGURE 6-14**

Termination

**Grade, Snow & Ice**
Terminate vent system bottom, minimum 12" (300 mm) above highest anticipated snow level.

Avoid locations where snow may drift and block vent and combustion air. Ice or snow may cause boiler to shut down if vent or combustion air becomes obstructed.

**"L" Corner**
Vent termination shall NOT be installed closer than 3' (0.9m) from inside corner of “L” shaped structure.
### FIGURE 6-15

- **Vegetation, Plants & Shrubs**: Keep vent termination 3’ minimum (0.9m) away from vegetation. Position termination where vent vapors will not damage plants/shrubs or air conditioning equipment.

- **Meters, Regulators, deck, porch**: Vent termination US only - 4’ (1.2m), Canada - 6’ (1.8m) horizontally from, no case above or below, electric meters, gas meters, regulators, and relief equipment, or under deck or porch.

### FIGURE 6-16

- **Walkways**: Locate vent termination minimum 7’ (2.1m) above any public walkway, with consideration to condensate.

- **People or Pets**: Locate combustion air and vent termination to prevent accidental contact with people or pets.

- **Stones, Balls, Etc.**: Position combustion air and vent termination where it will NOT be damaged by foreign objects, such as stones, balls, etc.

- **Multiple Family Dwellings**: Vent shall not terminate directly above paved sidewalk or paved driveway located between two single-family dwellings serving both dwellings.

- **Vapors**: Position termination where vent vapors are not objectionable.

- **Eddy, Flue Gases**: Position termination so it will not be effected by wind eddy, air born leaves, snow, or recirculated vent gases. Give consideration to excessive wind and locate away from windward side of building.
6.8 **Multiple Boiler Venting Installation**
- Multiple boiler application boiler shall be vented individually.
- Follow guidelines as described in Figure 6-1 through 6-7.
- Plastic vent pipe from vent connector must be readily accessible for visual inspection.

6.9 **Condensate Piping**
- Use materials acceptable to authority having jurisdiction. In absence of such authority:
  - USA - PVC or CPVC per ASTM D1785/D2845 Cement or primer per ASME D2564 or F493.
  - Canada - CSA or ULC certified PVC/CPVC pipe, fittings and cement.
- Attach condensate trap provided with boiler and field sourced piping to condensate drain at bottom of left or right side of boiler. See figure 6-17.
- Slope condensate drain pipe minimum 1/4" per foot (21mm/m) away from boiler.
- Use field source condensate pump if boiler located below disposal point.
- Field source condensate neutralizing kit as required by authority having jurisdiction or for environmentally friendly condensate disposal.
7 - GAS SUPPLY PIPING

7.1 General

- Use piping materials and joining methods acceptable to authority having jurisdiction. In absence of such requirements:
  - USA - National Fuel Gas Code, ANSI Z223.1/NFPA 54
  - Canada - Natural Gas and Propane Installation Code, CAN/CSA B149.1
- Size and install gas piping system to provide sufficient gas supply to meet maximum input at not less than minimum supply pressure. See Table 8.
- Support piping with hooks, straps, bands, brackets, hangers, or building structure components to prevent or dampen excessive vibrations and prevent strain on gas connection. Boiler will not support piping weight.
- Use thread (joint) compound (pipe dope) suitable for liquefied petroleum gas.

7.2 Conversion Kit Instructions

- See Gas Conversion Kit Instructions included with Boiler.

Table 8 - Gas Supply Pressure

<table>
<thead>
<tr>

</tr>
<tr>
<td></td>
<td>(0.7 kPa)</td>
<td>(3.3 kPa)</td>
</tr>
</tbody>
</table>

Note: See Glossary - Piping Table 16
7.3 Leak Check Gas Piping

Pressure test boiler and gas connection before placing boiler in operation.

- Pressure test over 1/2 psig (3.5 kPa). Disconnect boiler and its individual gas shutoff valve from gas supply system.
- Pressure test at 1/2 psig (3.5 kPa) or less. Isolate boiler from gas supply system by closing manual gas shutoff valve. See figure 7-2 and 7-4.
- Locate leakage using gas detector, noncorrosive detection fluid, or other leak detection method acceptable to authority having jurisdiction. Do not use matches, candles, open flames, or other methods that can provide ignition source.
- Correct leaks immediately and retest.
8.1 General
Electrically bond boiler to ground in accordance with requirements of authority having jurisdiction. Refer to:
- USA- National Electrical Code, ANSI/NFPA 70.

8.2 Line Voltage Connections (figure 8-3)
- Boiler
  A. Provide individual 120V, 30 amp circuit (recommended) with fused disconnect or service switch as required by authority having jurisdiction.
  B. Open High Voltage Junction Box (see Figure 8-1 and 8-3) to access line voltage terminal strip.
  C. Connect 120 VAC circuit to line voltage terminal strip 120 VAC L,N,G.

- Central Heating Pump
  A. Isolate pump from control module if pump FLA (Full Load Amps) exceeds 10 amp maximum allowable current draw. See Figure 8-3.
  B. Connect pump to line voltage terminal strip CH PUMP L,N,G.

- Domestic Hot Water Pump
  A. Isolate pump from control module if pump FLA exceeds 10 amp maximum allowable current draw. See Figure 8-3.
  B. Connect pump to line voltage terminal strip DHW PUMP L,N,G.

- General Pump (Boiler Loop)
  A. Isolate pump from control module if pump FLA exceeds 10 amp maximum allowable current draw. See Figure 8-3.
  B. Connect pump to line voltage terminal strip primary pump, L, N, G.

8.3 External Connections (figure 8-4)
- User Interface Terminals
  A. Factory wired to USER INTERFACE terminals

- Argus Link (Multiple boiler applications only)
- Outdoor Sensor, if used.
  A. Provided with boiler.
  B. Locate outdoor sensor to protect against wind and direct sunlight. Mounting instructions provided with sensor.
  C. Maximum wire length is 100 ft (30m) for 22 ga. wire, or 150 ft (45m) for 18 ga. wire.
  D. Connect wires to OUTDOOR SENSOR terminals. Wires are interchangeable.

- System Sensor (Multiple boiler applications only)
- Domestic Hot Water (DHW) Thermostat, if used.
  A. Use temperature control with dry contacts rated at 0.5 amps @ 120 VAC. Boiler control does not provide power to DHW temperature control.
8 - ELECTRICAL CONNECTIONS

**NOTICE**

**IMPORTANT:** Do not apply power to DHW T-T terminals. Dry contact only, use of isolation relay may be necessary.

- **B.** Maximum wire length is 330 ft (100m) 22 gauge wire.
- **C.** Connect wires (interchangeable) to DHW T-T terminals. Wires are interchangeable.

- **Central Heating Thermostat**
  
  - **A.** Use thermostat or boiler system control with dry contacts related 0.5 amps @ 120 VAC. Boiler control does not provide 24 VAC power to central heating thermostat.
  
  - **B.** Locate and install thermostat per manufacturer’s instructions. Maximum wire length is 330 ft (100m) for 22 ga. wire.
  
  - **C.** Connect wires to CH T-T terminals. Wires are interchangeable.

- **Low Water Cutoff (LWCO)**
  
  Factory installed.

**NOTICE**

Boiler transformer does not have adequate VA to power accessories, other than factory supplied LWCO.

**FIGURE 8-3 Isolation Relays for CH System Pump and DHW Pump**

**FIGURE 8-4 External Connections** (Do not apply external voltage to external terminals.)
9.1 Fill Boiler With Water And Purge Air

NOTE
To maintain boiler efficiency and prevent boiling inside the heat exchanger, flush entire heating system until clean.

- Flush heating system, including all heating zones.
- Fill boiler with potable water.
- Fill boiler and system piping with water (or antifreeze-water solution, if used). See antifreeze information page 13. Purge air from boiler using safety relief valve. Purge air from system piping.
- Inspect system piping and boiler connections. Repair any leaks immediately.
- Activate all heating zones and calls for heat, including CH calls and DHW calls (if available).
- Close manual gas shut off valve. Let system run for 30 minutes. When boiler goes into lockout, reset boiler by pressing "Reset" button until boiler resets.
- Do not open gas shutoff valve until all air is purged from system.

9.2 Fill Condensate Trap with Water

- Remove spring tension clip from clear hose attached to barbed fitting at bottom of flue collector. See figure 9-1.
- Disconnect hose from barbed fitting.
- Fill trap through fitting with approximately 2 cup (473 ml) water.
- Place hose barbed fitting back through bottom of chassis.
- Reassemble clear tube to barbed fitting.
- Secure tube to barbed fitting with spring tension clip. See figure 9-1.

</table>

* List parameters when factory default settings are changed.
9.4 Boiler Start-up and Operational Test

1. Verify air is purged from hydronic piping.
2. System test pumps - verify each pump is operational using vibration, noise and amp draw.
3. Verify gas piping
   • Confirm pressure test. See section 7.3.
   • Visually inspect piping to determine there are no open fittings or ends, and all valves at unused outlets are closed and plugged/capped.
   • Purge air from piping. Confirm there is a steady gas supply to the boiler.
   • Check piping and connections for leaks immediately after gas is turned on. Shut off gas supply and make necessary repairs if leaks found.
4. Follow OPERATING INSTRUCTIONS to initiate boiler operation. See section 10.
5. Inspect combustion air and vent piping. Verify pipe is not leaking and terminations are unobstructed and vent gas discharge is not a nuisance or hazard.
6. Verify boiler functions.
7. Inspect condensate disposal system. Verify condensate flows adequately and is disposed properly.
8. Check control module operation.
9. Check field sourced limits, low water cutoffs, etc. per manufacturer's instructions.

9.5 Check Firing Rate

1. Measure input, if a gas meter is installed in the system.
   • Turn off gas to all other appliances.
   • Activate some heating zones to dissipate heat.
   • Set boiler on high fire.
   • Use ½, 1 or 2 cu ft dial on gas meter. Measure time required for two or more complete revolutions. Measure time for one or more minutes.
   • Calculate input.

For Natural Gas:

\[
\text{Input (MBH)} = \frac{3600 \times \text{cu ft}}{\text{seconds}}
\]

Example: Natural Gas - Gas flow from Meter = 2 cu ft Measured time = 18 seconds

\[
\text{Rate (MBH)} = \frac{3600 \times 2 \text{ cu ft}}{18 \text{ seconds}} = 400 \text{ MBH}
\]

For Propane (LP):

\[
\text{Input (MBH)} = \frac{9160 \times \text{cu ft}}{\text{seconds}}
\]

For Metric formulas - See Glossary

2. Compare measured input to Table 12. If calculated input is not in range given in Table 12, check firing rate again after setting the combustion following steps in section 9.6.

<table>
<thead>
<tr>
<th>Rate @ High Fire</th>
</tr>

<td>Size</td>
</tr>
<tr>
<td>-------</td>
</tr>
<tr>
<td>399</td>
</tr>
</tbody>
</table>

9.6 Combustion Adjustment

Calibrated Combustion Analyzer is necessary for the following combustion adjustment.

**NOTICE**

Before setting combustion in HIGH fire, activate all heating zones to dump heat generated by the boiler running on high fire.

1. Enter installer menu (Enter + Menu buttons for 4 seconds).
   A. Scroll down to System Test.
   B. Push Enter button to enter System Test. When “System Test Off” displays, push Enter button and “Off” will start flashing.
   C. Scroll up to High Power and push Enter. “High Power” will stop flashing and becomes solid.
   D. Unit is now locked in high fire.
WARNING

Fire, explosion, asphyxiation and electrical shock hazard. Read this instruction and understand all requirements, including requirements of authority having jurisdiction before making adjustments. Failure to follow these instructions could result in death or serious injury.

2. Perform combustion test on HIGH fire using calibrated combustion analyzer. Adjust CO2 to within specifications by rotating the Throttle Screw, counterclockwise to increase CO2 level, clockwise to decrease CO2 level. See Figure 9-3 and 9-6.

After adjusting CO2 to correct level, verify:
(1) CO PPM level is in specified range and
(2) flame signal is in specified range. See Appendix A page 76.
CO2 level, CO PPM level, and flame signal for HIGH fire are given in the following tables.

### High Fire Combustion - 399 MBH

<table>
<thead>
<tr>
<th>Gas</th>
<th>CO2 Min.</th>
<th>CO2 Max.</th>
<th>CO</th>
</tr>
</thead>
<tbody>
<tr>
<td>Natural Gas</td>
<td>9.2</td>
<td>9.8</td>
<td>&lt;200ppm</td>
</tr>
<tr>
<td>Propane</td>
<td>10.0</td>
<td>11.0</td>
<td>&lt;200ppm</td>
</tr>
</tbody>
</table>

Adjust Offset Screw slowly and in small steps, no more than 1/8 of a turn each time. See Figure 9-3 and 9-6.

Perform combustion test on LOW fire using calibrated combustion analyzer. Adjust CO2 to within specifications by turning Offset Screw, clockwise to increase CO2 level, counterclockwise to decrease CO2 level. After adjusting CO2 to correct level, verify:
(1) CO PPM level is in specified range and
(2) flame signal is in specified range.
CO2 level, CO PPM level, and flame signal for LOW fire see following tables.
4. See Figure 9-4 for location of Offset Screw on modulating gas valve of various boiler models. T40 male Torx bit is necessary for removal of Offset Screw cap and adjustment of Offset Screw.

5. Set boiler to High Power using System Test to confirm combustion in High Fire (Step 2).

6. Combustion setting is now complete.
   A. Exit System Test mode by pushing Enter. High Power will start flashing.
   B. Scroll down to “OFF”. Push Enter button “OFF” stops flashing.
   C. Push Menu button twice to escape Installer Manual. Boiler returns to CH mode or DHW mode depending on type of call for heat available.

7. Check ignition quality 4 times with front jacket off. Close internal manual gas valve for 5 seconds and then re-open it. Boiler will go through post purge – prepurge – ignition sequence. Reset boiler if boiler goes into lockout.

8. Check ignition quality 4 times with the front jacket on. Close the external gas shutoff valve for 5 seconds and re-open it. Boiler will go through a post purge – prepurge – ignition sequence. Reset the boiler if boiler goes into lockout.
9.7 Perform CSD-1 Compliance Test (see paragraph 2.4 page 6)

Verify operation of boiler safety control operation with regard to no flow conditions as follows:

1. Turn off boiler using boiler service switch.
2. Disable general boiler pump. Disconnect multi pin connector J7 from control module. See Figure 9-7.
3. Disable secondary system pumps attached to system.
5. Boiler will fire. Based on natural convection within boiler, boiler will either:

   OR

   B. Shut off burner E40 "Return Water Temp". This is a soft lockout. When water temperature drops below limit boiler will automatically refire then Lockout A-06 requiring manual reset of control module. Press Reset button on User Interface.

   OR

   C. Shut off burner E39 "Flue Temperature Sensor". This is a soft lockout. When flue sensor drops below limit, boiler will automatically refire then Lockout A-06 requiring manual reset of control module. Press Reset button on User Interface.

6. After safety operation is verified, turn off boiler via service switch. Remove jumper in T-T. Replace J7 connector into control module, enable secondary pump operation, turn service switch on and restart system to verify operation.

7. Verify low water cutoff (LWCO) is functional. Push test button, hold for 30 seconds. LWCO light will blink indicting low water and boiler in lockout. Push button again to reset.

---

**WARNING**

Asphyxiation hazard. Carbon monoxide is odorless, tasteless, clear colorless gas, which is highly toxic. Verify cap is firmly placed on combustion analyzer port to prevent CO emission. Failure to do so could result in death or serious injury.

**FIGURE 9-5 Combustion Analyzer Port**

- Flue Gas Test Port
- Vent Connector
- Combustion Air Inlet
- Combustion Air Test Port

---

**FIGURE 9-6 Burner Flame**

Look for BLUE flame with slight YELLOW tips evenly spaced around burner.
9.8 Complete Start Up Procedure

1. Reset control parameters to operating settings if adjusted to allow startup and operation test.

2. Follow instructions TO TURN OFF GAS TO APPLIANCE (page 41) if boiler is not being placed into immediate operation.

3. Enter installer information on Warranty Registration Card.

4. Gather all instructions, manuals, wiring diagrams, warranty registration card and other supporting information. Review with user and/or affix in conspicuous location adjacent to boiler.

FIGURE 9-7 Control Module J7 Connector
FOR YOUR SAFETY READ BEFORE OPERATING

⚠️ WARNING

If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- This appliance is equipped with an ignition device which automatically lights burner. **Do NOT try to light this burner by hand.**

- Before operating smell all around appliance area for gas. Be sure to smell next to floor because some gas is heavier than air and will settle to the floor.

- **Use only your hand to turn the gas shutoff valve.** Never use tools. If valve will not turn by hand, do not try to repair it, call a qualified service technician. Force or attempted repair may result in fire or explosion.

- **Do not use this appliance if any part has been under water.** Immediately call a qualified service technician to inspect appliance and to replace any part of control system and any gas control which has been under water.

---

10.1 OPERATING INSTRUCTIONS

*Stop! Read Safety information above.*

- Set thermostat to lowest setting.
- Turn "OFF" all electrical power to appliance.
- This appliance is equipped with an ignition device which automatically lights the burner. **Do not try to light burner by hand!**
- Remove front jacket panel.
- Turn gas shutoff valve to closed position. Handle should be perpendicular to gas pipe.
- Wait 5 minutes for any gas to clear. Smell for gas, including near floor. If you smell gas, **STOP!** Follow instructions on this page: "**What To Do If You Smell Gas.**" If you do not smell gas, go to next step.
- Turn gas shutoff valve to the open position. Handle should be parallel to gas pipe.
- Replace front jacket panel.
- Turn "ON" electrical power to appliance.
- Set thermostat to desired setting.
- If the appliance will not operate, follow instructions TO **TURN OFF GAS TO APPLIANCE** and call your service technician or gas supplier.

---

10.2 TO TURN OFF GAS TO APPLIANCE

- Set thermostat to lowest setting.
- Turn "OFF" all electric power to appliance if service is to be performed.
- Remove front jacket panel.
- Turn gas shutoff valve handle to closed position. Handle should be perpendicular to gas pipe.
- Replace front jacket panel.

---

⚠️ CAUTION

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

---

**FIGURE 10-1 Gas Shutoff Valve**
### 11.1 Beginning of Each Heating Season

- Check boiler area is free from combustible materials, gasoline, and other flammable vapors and liquids.
- Visually inspect combustion air and vent piping for proper operation. Check for and remove any obstruction to flow of combustion air or vent gases. Immediately repair or replace pipe showing deterioration or leakage. Reassemble per instructions in section 6. Ensure proper reassembly and resealing of system.
- Visually inspect condensate drain line for proper operation. Checking for deteriorated or plugged condensate drain line. Verify condensate trap drains freely.
- Test safety relief valve for proper operation. Refer to valve manufacturer's instructions packaged with relief valve.
- Examine flue passages in heat exchanger, burner, condensate lines, and cleaning (if necessary) by following instructions in “Annual Examination and Cleaning of Boiler Components” in this section.
- Combustion air blower motor furnished with boiler are permanently lubricated from factory and require no further lubrication. Lubricate field sourced pumps and/or motors according to pump and/or motor manufacturer's instruction.
- Check following components are operating properly and are free of blockages or obstructions:
  A. system air vent;
  B. check venturi air inlet for blockage and clean as required;
  C. verify pressure test port cap and combustion test port are in place;
  D. return temperature sensor clip must be securely seated on pipe; Check boiler for any sign of leaks.
- Check low water cutoff according to manufacturer instructions.
- Check flame signal with user interface. Should be 8 micro amps at 100% firing rate (High fire).
- Visual inspection of flame through sight glass. Burner should be fully illuminated. See figure 11-1.
- Check heating system expansion tank.
11.2 Annual Shut Down Procedure
- Follow instructions “To Turn Off Gas To Appliance” unless boiler is also used to supply domestic hot water. See section 10.
- Drain system completely if system does not have antifreeze when heating system is to remain out of service during freezing weather.
- Drain condensate lines when boiler is to be exposed to freezing temperatures.

**WARNING**
Following service procedures must be performed by qualified service agent. Boiler owner shall not attempt these steps. Failure to do so could result in death or serious injury.

11.3 Annual Inspection and Cleaning of Boiler Components
- Obtain Burner Inspection Kit. Follow kit instructions to prepare for examination and cleaning.
- Burner and heat exchanger inspection and cleaning.
  A. Remove gasket and burner. Allow burner to clear top lip of chassis.
  B. Remove any residual sleeve and/or gasket material from removed burner.
  C. Clean burner using air hose directed into top of burner opening to dislodge any debris in burner ports. Inspect burner for foreign matter in flame ports or inside burner. Remove foreign matter by blowing with compressed air or vacuuming. Replace burner if it cannot be cleaned or is showing deterioration.
  D. Clean heat exchanger with low pressure water spray. Use flexible handle nylon brush to loosen sediment and oxide on all accessible heating surfaces of heat exchanger. Take care not to get brush stuck in heat exchanger.
  E. Remove any remaining loosened sediment using shop vacuum with snorkel attachment.
  F. Flush condensate collector if significant debris found in heat exchanger.
  G. Expand upper spring tension clip of condensate trap using hose clamp pliers. Disconnect condensate trap from condensate collector. See Figure 11-2.
  H. Disconnect wire harness from vent temperature sensor. See figure 11-2.
  I. Flush collector and condensate trap with water. Allow water to drain through condensate collector port.
- Follow Burner Inspection Kit instructions to reassemble boiler and resume operation.
### Table 13 - Sea Level Ratings

<table>
<thead>
<tr>
<th>Size</th>
<th>Boiler Input Rate (MBH)(^{(1)})</th>
<th>Heating Capacity (MBH)(^{(1)(2)})</th>
<th>Net AHRI Rating, Water (MBH)(^{(1)(3)})</th>
<th>Thermal Efficiency</th>
</tr>
</thead>
<tbody>
<tr>
<td>399</td>
<td>Maximum 399, Minimum 80</td>
<td>379</td>
<td>329</td>
<td>96.0</td>
</tr>
</tbody>
</table>

\(^{(1)}\) 1000 Btu/hr (British Thermal Units Per Hour)

\(^{(2)}\) Heating Capacity and Thermal Efficiency is based on DOE (Department of Energy) test procedures.

\(^{(3)}\) Net AHRI Ratings based on piping and pickup allowance of 1.15. Contact Technical Support before selecting boiler for installations having unusual piping and pickup requirements, such as intermittent system operation, extensive piping systems, etc.

### 12.1 Ratings and Capacities

- Constructed and hydrostatically tested for maximum allowable working pressure of 150 psig (pounds per square inch gauge) (1035 kPa) in accordance with ASME Boiler and Pressure Vessel Code, Section IV, Rules for Construction of Heating Boilers.
- Ratings used for elevations up to 2000 ft (600m) above sea level.
- For elevations between 2000 ft (600m) and 4500 ft (1350m), install high altitude control kit.
- For elevations above 4500 ft (1350m) install high altitude control kit and:
  - USA - Reduce input rate 4% for each 1000 ft (300m) beyond 4500 ft.
  - Canada - Contact Provincial authority having jurisdiction for installations above 4500 feet (1350 m) above sea level.
13 - TROUBLE SHOOTING

If boiler does not function.

Remove Jacket. Is User Interface lit?

<table>
<thead>
<tr>
<th>NO</th>
<th>YES</th>
</tr>
</thead>
</table>

Check for 120 vac in boiler high voltage terminal box. Is 120 vac present?

<table>
<thead>
<tr>
<th>NO</th>
<th>YES</th>
</tr>
</thead>
</table>

Check power supply to boiler. Check breakers, disconnect and emergency switch for voltage. Fix or repair external wiring.

Locate fuse holder on front of control and pull to check fuse. Spare fuse located on controller. Make sure all wire harness plugs are properly pushed in. Release plug lock with finger, remove and reconnect all 7 plugs. Check wiring from User Interface to Low Voltage Terminal Strip including checking continuity of wires. Does User Interface Display work?

<table>
<thead>
<tr>
<th>NO</th>
<th>YES</th>
</tr>
</thead>
</table>

Remove User Interface from base. Using Digital Voltmeter check for 25 to 30 Vdc. Is voltage present?

<table>
<thead>
<tr>
<th>NO</th>
<th>YES</th>
</tr>
</thead>
</table>

Replace Control Module

Replace User Interface

Does display show "Standby - No Demand?"

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
</table>

There is no call for heat or hot water. Check thermostat. Outdoor air sensor may be faulty - boiler in warm weather shutdown.

Blocking too long error

Enter Installer Menu, Boiler Status. Scroll to most recent Lockout Alarm or Blocking Error. Diagnose corrective action using appropriate Troubleshooting Tree.

Lockout Alarm A 0 5
GV relay error

Unplug connector on supply sensor. Measure continuity of high limit sensor (close/open signal) between two pins connected to two purple wires. Is continuity available?

YES NO

Is wire harness connected to both Gas Valve and J13 connector on Control Module?

YES NO

Disconnect J13 connector on gas valve. Measure resistance across top and bottom pins (1 & 5). Is resistance between 1.0 and 1.2 kΩ?

YES NO

Replace Control Module

NO

Disconnect harness from Gas Valve. Does each wire have continuity between Gas Valve and Control Module?

YES NO

Replace Gas Valve

NO

Replace Harness

NO

Is supply pipe heat exchanger hot?

YES NO

Boiler has been dry fired. System has too much air. Close manual gas valve (shut off gas). Purge air from system, wait for system to cool.

Replace Supply Sensor
13 - TROUBLESHOOTING

**Lockout Alarm A 0 1**

**Ignit error**

- **Is this a new boiler on first startup?**
  - **YES**
  - **NO**

- **Is this boiler to run with propane gas?**
  - **YES**
  - **NO**

- **Has the gas valve been adjusted per instructions?**
  - **NO**
  - **YES**

  - **Adjust gas valve, throttle and offset per instructions.**

- **Enter the Installer Menu and place the boiler into test mode in high fire. Once the boiler starts, go to the boiler status screen and monitor the flame signal. Is the flame signal greater than 7.0uA when running on high fire?**
  - **YES**
  - **NO**

- **Does the boiler ignite and stay running?**
  - **YES**
  - **NO**

  - **Reset the boiler by pressing the 'Reset' button. When the boiler tries to ignite, is there a strong, consistent spark evident through the sight glass?**
    - **YES**
    - **NO**

  - **Disconnect the gas valve electrical harness and close the gas shutoff valve. With the ignition lead connected to the igniter, hold the tip near the chassis ground and attempt ignition. Is a spark observed between the igniter and ground?**
    - **YES**
    - **NO**

  - **Remove the gas train including the flue transition. Remove the burner and inspect. Any sign of damage to burner surface?**
    - **YES**
    - **NO**

  - **Inspect the flue way along the sides of the baffle near the coil for blockages. Is there any apparent debris or obstruction of the flue way?**
    - **YES**
    - **NO**

- **Check all wires including the igniter and flame sensor leads. Check for proper and tight connections to control board. Are all wires connected?**
  - **YES**
  - **NO**

  - **Open gas shutoff valves.**

  - **Inspect Vent System for blockages. Is the vent system clear?**
    - **YES**
    - **NO**

  - **Clear vent blockage.**

- **Connect all wires and check for secure fit.**

- **Check vent termination for proper consideration of wind effects.**

- **Replace/clean flame sensor or igniter.**

- **Replace Control Module.**

- **Replace Burner.**

- **Refer to the Heat Exchanger cleaning section.**

- **Refer to the Gas Valve Troubleshooting Tree.**
Error shows when safety circuit is open. Remove J13 connector from control module. Check for continuity between two pins connected to two pink wires, is continuity available?

- **YES**
- **NO**

Replace Control Module

Unplug molex connector on supply temperature sensor. Check continuity between two pins on sensor (two pins connected to two pink wires). Is continuity available?

- **YES**
- **NO**

Check for loose connections on two pink wires on J13 connector, supply sensor, and safety temperature switch.

- **YES**
- **NO**

Fix Loose Connections

Replace Wire Harness

Is boiler supply pipe (above heat exchanger) hot?

- **YES**
- **NO**

Let all zones run until water temperature drops.

Is Heat Exchanger surface hot?

- **YES**
- **NO**

Wait for boiler to cool down.

Boiler fired without enough water flow through heat exchanger. Heat exchanger is over heated. Either high limit or heat exchanger temperature switch is open. Check the following:

- Air in system?
- Verify water flow in system piping
- Flush system if water is dirty.
13 - TROUBLE SHOOTING

Is Combustion Air Blower operating?

YES  NO

Disconnect 4-wire harness from Combustion Air Blower. Does Combustion Air Blower speed increase?

YES  NO

Disconnect harness from Control Module J9. Continuity in each wire of 4-wire harness (yellow, red, white, black)?

YES  NO

Replace Control Module  Replace harness

Replace Combustion Air Blower

Are 3-wire and 4-wire harnesses connected to Combustion Air Blower?

YES  NO

Disconnect harness from Control Module J9 connector. Measure voltage between two pins, J9-2 and J9-3 on Control Module (second and third pins of J9, count from outside). Is voltage 120 Vac +/- 10% available?

YES  NO

Replace Control Module  Replace harness

Replace Combustion Air Blower

Connect harness
Disconnect harness from High Temperature Supply Switch and Control Module J13.
Check continuity of both purple wires. Continuity available for both purple wires?

**YES**

Is supply water temperature less than 185°F (91°C)?

**YES**

Replace wire(s)

**NO**

Is High Temperature Supply Switch open (no continuity between terminals 1 and 3)?

**YES**

Replace High Temperature Supply Switch

**NO**

Measure resistance across High Temperature Supply Switch terminals 2 and 4? Does resistance match supply water temperature (see table)?

**YES**

Replace Control Module

**NO**

Replace High Temperature Supply Switch

**YES**

Replace Control Module

**NO**

Replace High Temperature Supply Switch

**P**  
Blocking Error  E 3 5  
False flame detect

Inspect burner through sight glass. Is flame present?  
YES  NO

Turn off manual gas shutoff valve. Follow instructions TO TURN OFF GAS TO APPLIANCE. Replace Gas Valve.

Inspect harness connection Flame Sensor. Is connection clean and secure?  
YES  NO

Remove Flame Sensor. Is rod free of contamination?  
YES  NO

Replace Flame Sensor or harness

Follow Operating Instructions to initiate boiler operation. Enter Installer Menu, Boiler Status, Flame Signal. Is flame signal greater than 3.7µA (Boiler may be running at any firing rate)?  
YES  NO

Replace Control Module

Replace Flame Sensor and Burner

Replace Control Module
13 - TROUBLE SHOOTING

Is LWCO installed?

NO    YES

Install LWCO wire to low Voltage terminal strip LWCO connections.

Verify system is filled with water.

YES    NO

Disconnect LWCO from low voltage terminal strip. Check for continuity through LWCO safety circuit. Continuity?

YES    NO

Check low voltage terminal strip connections. Verify J16 connector is connected. Verify continuity between low voltage terminal strip LWCO connections and J16-1 and J16-4. Continuity?

NO    YES

Check LWCO per manufacturer’s instructions repair or replace.

Replace Wire Harness    Replace Control Module
13 - TROUBLE SHOOTING

Read flue gas temperature on User Interface.
Is temperature higher than 200°F?

- **YES**
  - Boiler is over fired. Wait for boiler to cool. Fix flow rate problem if any, purging all air out of the system.

- **NO**
  - Use thermocouple to measure flue gas temperature through sampling port. Is the measured temperature and flue temperature reading on User Interface significantly different?

  - **YES**
    - Replace Flue Gas Sensor

  - **NO**
    - Replace Control Module

Return Temp

Is correct harness connected to return sensor (2 Brown Wires)?

- **YES**
- **NO**

Unplug molex connector on return sensor. Is there moisture or liquid on metal pins? Liquid might be water or antifreeze solution.

- **YES**
- **NO**

Remove all liquid from connector. Check for leaks. Repair all leaks.

Is Primary Pump properly oriented?

- **YES**
- **NO**

Disconnect harness from Return Water Sensor. Measure resistance using digital ohm meter. Is resistance between 950 to 33,000 ohms?

- **YES**
- **NO**

Install Primary Pump in proper orientation

Replace Control Module

Replace Return Water Sensor

**Blocking Error E 4 4**
Phase error

Measure incoming power with volt meter. Is terminal 120 VAC (L) approximately 120 VAC? Is 120 VAC (N) approximately 0 VAC?

- **YES**
- **NO**

Verify order of pins on J2. Pin order should be: empty, black (or red), white, green. Measure volts on pins of black wire and white wire. Is wiring/pins in right order? Does black/wire have 120 VAC? Does white wire/pin have 0 VAC?

- **YES**
- **NO**

Correct power supply to Boiler

Replace Control Module

Replace Wire Harness
These error messages are displayed when the control board detects fault in blower motor system.
Check wire connector to blower.
Check connector J9 on control board.
Is any connection loose?

**YES**  **NO**  

Fix the connection.

Replace blower motor. Does this correct the problem?

**YES**  **NO**  

Boiler is operating properly

Replace Control Module

Is power supply between 59 and 61 Hz?

**YES**  **NO**  

Is power supply circuit breaker loose or faulty?

**YES**  **NO**  

Replace circuit breaker

Is field wiring loose or faulty?

**YES**  **NO**  

Correct wiring

Replace Control Module

Provide frequency stabilized power supply rated at 60 Hz +/- 2%
13 - TROUBLESHOOTING

See Thermistor Resistance Chart - Page 61 of this manual

Is field grounding conductor connected to High Voltage Terminal Strip 120 VAC (G)?
- YES  - NO
  Disconnect field wiring. Is continuity between field wiring neutral and ground less than 10 ohms?
    - YES  - NO
      Replace Control Module  Correct faulty ground conductor

Is High Limit Aquastat being used?
- YES  - NO
  Reset if Red
  Check jumper installed on external high limit terminals
  Is harness plugged into Control Module J5?
    - YES  - NO
      Replace Control Module

Is harness plugged into Supply water Sensor?
- YES  - NO
  Replace Supply Water Sensor
  Replace Wires
  Unplug J5 connector on Control board. Using digital meter measure resistance between terminals J5-11 and J5-3. Estimate Sensor temperature. Does it fall in the range of the Resistance Chart?
    - YES  - NO
      Replace Control Module  Replace Supply Water Sensor
13 - TROUBLE SHOOTING

Is harness plugged into Return Temperature Sensor?
Is harness plugged into Control Module J5?

- Blocking Error E 5 2
- Return Sens Open

Insert Harness

Check continuity of brown wires between Return Temperature Sensor and Control Module J5-4 and J5-12 Continuity?

Replace Wires

Measure Return Temperature Sensor resistance with digital meter. Estimate Sensor temperature. Does temperature fall within ranges shown on chart?

Replace Control Module
Replace Return Temperature Sensor

See Thermistor Resistance Chart - Page 61 of this manual

Supply Water Temperature Sensor Resistance Chart

Disconnect wire harness from High Temperature Supply Switch. Measure resistance across terminals 2 and 4. Does temperature fall within ranges shown in chart?

NO

YES

Disconnect J5 from Control Module. Continuity between J5-1 and Switch 2? Continuity between J5-3 and Switch 4?

NO

YES

Replace Control Module

Replace wires

Replace High Temperature Supply Switch

See Thermistor Resistance Chart - Page 61 of this manual

P - Blocking Error E 59

Flue Sensor Shunted

Is harness plugged into Vent Temperature Sensor? Is harness plugged into Control Module J5?

NO

YES

Insert harness

Replace wires

Replace Vent Temperature Sensor

Replace Control Module

Disconnect harness from Vent Temperature Sensor and Module J5. Continuity for each blue wire?

NO

YES

Measure resistance across Vent Temperature Sensor terminals. Does resistance match estimated flue temperature (see table)?

NO

YES

Replace Control Module
13 - TROUBLE SHOOTING

Disconnect harness from Control Module J5. Measure resistance between brown wires at terminals J5-4 and J5-12. Is resistance less than 50 ohms?

- **NO**
  - Replace wires
  - Replace Control Module

- **YES**
  - Replace Return Water Sensor

---

Disconnect harness from Return Temperature Sensor. Measure resistance across sensor terminals. Is resistance less than 50 ohms?

- **NO**
  - Replace Return Water Sensor

- **YES**
  - Replace Control Module

---

Disconnect wire harness from Vent Temperature Sensor. Measure Sensor resistance. Does resistance match estimated flue temperature?

- **NO**
  - Replace Vent Temperature Sensor

- **YES**
  - See Thermistor Resistance Chart - Page 61 of this manual

15 - GLOSSARY

- **ANSI** - American National Standards Institute, Inc. oversees creation and maintenance of voluntary consensus standards, including ANSI Z21.13/CSA 4.9: Gas-Fired Low Pressure Steam and Hot Water Boilers.

- **ASTM** - American Society for Testing and Materials. ASTM International is one of largest voluntary standards development organizations in world trusted source for technical standards for materials, products, systems, and services. Known for their high technical quality and market relevancy, ASTM International standards have important role in information infrastructure that guides design, manufacturing and trade in the global economy.

- **AUTHORITY HAVING JURISDICTION** - Individual or organization adopting and enforcing codes, rules, and by-laws governing various concerns of community. Commonly referred to as "final authority" for any matters relating to LIFE SAFETY and BUILDING CONSTRUCTION within a community.

- **Btu** - Abbreviation for British Thermal Unit. Quantity of heat required to raise temperature of 1 pound of water 1°F.

- **BURNER** - Device for final conveyance of gas or mixture of gas and air, to combustion zone.

- **COMBUSTION** - Rapid oxidation of fuel gases accompanied by production of heat or heat and light. Complete combustion of fuel is possible only in presence of adequate supply of oxygen.

- **COMBUSTIBLE MATERIAL** - Materials made of or surfaced with wood, compressed paper, plant fibers, or other materials capable of being ignited and burned. Such material shall be considered combustible even though flame-proofed, fire-retardant treated, or plastered.

- **CONDENSATE** - Liquid separated from flue gas due to reduction in temperature.

- **DIRECT VENT BOILER** - Boiler constructed and installed so all combustion air is derived directly from outdoors and all vent gases are discharged to outdoors.

- **DRAFT** - Pressure difference causes gases or air to flow through a chimney, vent, flue or appliance.

- **FLA** - Full load amps.

- **FLUE GASES** - Products of combustion plus excess air in appliance flues or heat exchanger.

- **GAS PIPE SIZES** - Size pipe per NFPA-54.

- **HIGH-VOLTAGE** - Circuit involving potential of not more than 600 volts and having circuit characteristics in excess of those of low-voltage circuit.

- **IGNITER** - Device utilizing electrical energy to ignite gas at main burner.

- **LEAK CHECK** - Operation performed on gas piping system to verify system does not leak.

- **LOW WATER CUTOFF** - Device constructed to automatically cut off fuel supply when surface of water in boiler falls to lowest safe water level.

- **LOW-VOLTAGE** - Circuit involving potential of not more than 30 volts.

- **METRIC GAS METERS**

  \[
  \text{MBH} = \frac{127,116 \times \text{cu meters}}{\text{Seconds}}
  \]

  For example: Gas Meter measures 0.1 cubic Meters in 100 seconds

  \[
  \text{MBH} = \frac{127,116 \times 0.1}{100} = 127 \text{ MBH}
  \]

- **PRESSURE TEST** - Operation performed to verify gas tight integrity of gas piping following its installation or modification.

- **PURGE** - To free gas conduit of air or gas, or mixture of gas and air.

- **PURGE TIME** - Period of time intended to allow for dissipation of any unburned gas or residual products of combustion.

- **QUALIFIED AGENCY** - Any individual, firm, corporation, or company engaged in and responsible for:
  - Installation, testing, or replacement of gas piping, or connection, installation, testing, repair or servicing of appliances and equipment.
  - Experienced in such work.
  - Familiar with all precautions required.
  - Complies with all requirements of authority having jurisdiction.
• **SAFETY RELIEF VALVE** - Valve designed to relieve pressure in hot water supply system when pressure exceeds pressure capability of equipment.

• **SAFETY SHUTOFF DEVICE** - Device that will shut off gas supply to controlled burner in event source of ignition fails.

• **SEDIMENT TRAP** - Gas piping arrangement designed to collect any liquid or solid contaminant before reaching gas valve.

• **VENT** - Passageway used to convey flue gases from appliance vent connector to outdoors.

• **VENTING SYSTEM** - Continuous open passageway from of appliance vent connector to outdoors for purpose of removing flue or vent gases.
1.1 Introduction
Boiler is equipped with programmable electronic control and user interface module.

1.2 Operation
• Display: 4 x 20 character LCD screen to show boiler status.
• Function Keys

## User Menu (Press Menu button on user interface to access User Menu)

**User Menu structure includes:**

- ‘Boiler Status’ submenu – User can monitor general boiler status parameters such as sensor temperatures and pump operation.
- ‘Settings’ submenu – User can view CH, adjust DHW supply water set points and also select control language.
- ‘Cascade Status’ submenu – Boiler set to function as part of multiple boiler installation; submenu used to view runtime parameters. See Multiple Boiler Manual. (This line is not shown if boiler is not in cascade system).

### Boiler Status

Supply Temperature set point displayed.

If boiler running in CH mode, CH set point displayed.

Note:

- While running in Outdoor Reset mode, this value may change in proportion with the outdoor temperature.
- If the boiler is running in DHW mode, the DHW supply set point is displayed.

Several boiler runtime parameters can be viewed while in ‘Boiler Status’ submenu.

Operational status of pump system also shown.

Information available during all states of boiler operation.

Sensor values with troubleshooting tree used to diagnose typical problems.
### User Interface Display

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td><strong>Settings</strong></td>
<td>Adjust CH set point to hydronic system design while in Operating in CH Mode = 0 (CH with Thermostat) or 3 (Permanent Demand).</td>
</tr>
<tr>
<td><strong>Central Heating Setpoint</strong></td>
<td>In CH Mode = 1 (CH with Thermostat and Outdoor Reset) or 2 (CH with Full Outdoor Reset). Display will change to 'OD Reset Setpoint' and cannot be changed. Controller calculates set point based on outdoor temperature. Note: For explanation of available CH heating modes, refer to 'CH Mode' section located in 'CH Settings' submenu in Installer Menu.</td>
</tr>
<tr>
<td><strong>DHW Setpoint</strong></td>
<td>DHW set point determines supply water temperature set point while operating in DHW mode.</td>
</tr>
<tr>
<td><strong>Change Temperature Units</strong></td>
<td>User interface temperature unit of measure is selected using 'Change Temperature Units' screen. Fahrenheit and Celsius available.</td>
</tr>
</tbody>
</table>

**Setting Range:** 104°F to 195°F (40°C to 91°C)  
**Default Value:** 140°F (60°C)  

**Setting Range:** 104°F to 195°F (40°C to 91°C)  
**Default Value:** 180°F (82°C)
## Installer Menu

<table>
<thead>
<tr>
<th>Installer Menu</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| **User Interface Display** | Installer Menu structure includes:  
  - User 'Menu' can be accessed by pressing 'Menu' key on user interface.  
  - Installer 'Menu' can be accessed by first pressing and holding the 'Enter' key continue to hold and at the same time press and hold the 'Menu' key for 5 seconds. (You must press and hold the 'Enter' key first then press and hold the 'Menu' key).  
  - 'Boiler Status' submenu – Monitors detail boiler status parameters such as flame signal, fan speeds and stored error codes.  
  - 'Boiler Config' submenu – Modifies general boiler settings.  
  - 'CH Settings' submenu – Modifies advanced Central Heating settings including outdoor reset curve parameters and boost function.  
  - 'DHW Settings' – Modifies Domestic hot Water control settings such as DHW priority time.  
  - 'Cascade Settings' - Refer to Multiple Boiler Manual.  
  - 'System Test' – Tool aids setup of boiler installation or diagnosis of common problems.  
  - 'Fan Speed' - Allows adjustment of minimum and maximum ignition speeds if the specific installation requires it. |
| **Boiler Status** | Combustion air Blower provides airflow through Combustion and Vent systems.  
Fan speed status screen indicates actual and operational fan speeds in RPM, high, low and ignition power speed settings.  
Settings are for information only to aid in troubleshooting.  
Boiler equipped with ionization rod to detect presence of combustion using flame rectification method. When flame is present, flame ionization rod measures small DC offset current across flame to ground (i.e. burner surface).  
'Flame’ screen in 'Boiler Status’ submenu displays information regarding flame ionization system; for information only and used in diagnosing combustion problems. See troubleshooting guide. |
Installer Menu

Control module logs successful and failed ignition attempts. Information accessed in 'Ignition Attempts' Screen as shown.

Ignition attempts are stored in non-volatile memory and are retained in event of power failure.

**Figure A-1 Typical Ignition Cycle**

Following control features are implemented to ensure safe and reliable operation of Combustion System:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>False Flame Detection</strong></td>
<td>If flame is detected at end of pre-spark period (Ignit_0) than lockout will occur.</td>
</tr>
<tr>
<td><strong>Re-ignition</strong></td>
<td>If at end of safety period no flame detected control will go to post-purge removing unburned gas. Re-ignition attempt started following same cycle. Number of re-ignition attempts limited to 3 after which lockout occurs.</td>
</tr>
<tr>
<td><strong>Intermittent Operation</strong></td>
<td>Boiler can be firing continuously for 24 hours. Burner switched off and restart sequence follows.</td>
</tr>
<tr>
<td><strong>Flame out too late</strong></td>
<td>If flame detected after post purge lockout follows.</td>

<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>BOILER CONFIG</strong></td>
<td></td>
</tr>
<tr>
<td>Pump Mode</td>
<td>MODE: 0</td>
</tr>
<tr>
<td>CH or CH &amp; DHW</td>
<td></td>
</tr>
</tbody>
</table>

**Explanation**

Two pump modes are available:

1. **Pump Mode = 0 ‘CH or CH&DHW’**
   - In this mode either CH or DHW pump terminal is energized depending on type of demand (CH or DHW).
   - CH and DHW pumps are never energized at the same time.
   - In the case of simultaneous call for both CH and DHW, the energized pump depends on whether the boiler is currently supplying CH or DHW demand. Refer to DHW Priority settings below.
   - This is typical of hydronic system design with separate CH and DHW Pumps.

2. **Pump Mode = 4 ‘System Pump’**
   - In this mode only one external system pump is installed in hydronic system. This pump will energize independent of type of demand (CH or DHW).
   - Connect this pump to CH/System Pump electrical terminal block. See page 35 for diagram.
   - DHW pump terminal does not function.
   - This is typical of hydronic system design which utilizes zone valves for all CH zones and DHW indirect tank.

**Note:**
- Pump Mode selection depends on electrical and hydronic system design. Please refer to sections 5 and 8 for recommended hydronic piping and electrical configurations.
- Internal heat exchanger pump is energized anytime demand exists regardless of Pump Mode setting or type of demand (CH or DHW).

**User Interface Display**

<p>| | |</p>
<table>
<thead>
<tr>

<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>BOILER CONFIG</strong></td>
<td></td>
</tr>
<tr>
<td>Service Reminder Status</td>
<td>On</td>
</tr>
<tr>
<td>Reminder</td>
<td>365 days</td>
</tr>
</tbody>
</table>

‘Service Reminder’ feature allows the installer to enable or disable a service reminder notification on the User Interface at a predefined interval.

Service reminder does not affect operation of boiler in any way. It is only a reminder to End User that routine preventative maintenance is required by qualified service technician.

**Allowed Range:** 1 to 999 days
### User Interface Display

#### Explanation

4. **Central Heating (CH) modes available:**

- **CH Mode = 0 ‘CH with Thermostat’**
  - Boiler will attempt to satisfy CH demand while CH thermostat input is closed.
  - Boiler will modulate its firing rate to maintain CH set point and match system heat load.
  - CH set point adjusted in ‘Settings’ submenu under ‘User Menu’

- **CH Mode = 1 ‘CH with Thermostat and Outdoor Reset’**
  - Boiler will attempt to satisfy CH demand when CH thermostat input is closed.
  - Boiler will modulate its firing rate to maintain CH set point and match system heat load.
  - CH set point calculated as function of outdoor temperature using outdoor reset curve. See figure A-2

- **CH Mode = 2 ‘CH with Full Outdoor Reset’**
  - CH demand is determined by outdoor temperature and Warm Weather Shutdown temperature.
  - Boiler will permanently attempt to satisfy CH demand, when CH demand is available.
  - CH thermostat input is ignored.
  - CH set point calculated as function of outdoor temperature using outdoor reset curve. See figure A-2

- **CH Mode = 3 ‘CH with Permanent Demand’**
  - CH demand is permanently on.
  - Boiler will permanently attempt to satisfy CH demand.
  - CH thermostat input is ignored.
  - CH set point is adjusted in ‘Settings’ submenu under ‘User Menu’

**Note:**

- Once CH demand is satisfied (i.e. CH thermostat opens or boiler determines its minimum firing rate exceeds system heating load):
  - Burner shuts off, boiler enters post purge.
  - CH pump continues to run for 30 seconds.
  - Control will wait until Anti-cycle time of 180 seconds elapses before boiler fires again. Prevents short-cycling.
- The internal heat exchanger pump is energized anytime demand exists regardless of Pump Mode setting or type of demand (CH or DHW).

## User Interface Display

### DHW Settings

<table>
<thead>
<tr>
<th>Display</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="DHW SETTINGS" /></td>
<td>Maximum time boiler operates in DHW mode limited by DHW Maximum Priority Time Setting. Priority timer starts when both CH and DHW demand is present. Boiler will switch from DHW back to CH operation after Maximum Priority Time has elapsed. CH demand then has priority until Maximum Priority Time has elapsed. Process repeats until either CH or DHW demand satisfied.</td>
</tr>
<tr>
<td><img src="image" alt="DHW max. priority time" /></td>
<td>Allowed Range: 1 to 60 Minutes Default Setting: 30 Minutes</td>
</tr>
</tbody>
</table>

### System Test

<table>
<thead>
<tr>
<th>System Test</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="SYSTEM TEST" /></td>
<td>System test can be activated via installer menu for testing system at fixed power rates. Boiler can be started without CH or DHW demand being present. System Test has priority over any system demand while test mode activated. System test mode automatically ends after 30 minutes boiler resumes normal operation. The following modes are available: • Disabled • Low power - Burner starts. After ignition period has finished the burner stays at low power • Ignition power - Burner starts. Stays at ignition power • High power - Burner starts. After ignition period has finished burner stays at high power.</td>
</tr>
<tr>
<td><img src="image" alt="General Boiler Pump Off" /></td>
<td>Note: • Before running system test modes, check if hydronic system capable of dissipating heat. • Both heat exchanger and CH pumps are activated during system test. • During System Test Mode, boiler will run at fixed power rates until supply water temperature is 93°C/195°F • All other safety functions remain active while in System Test Mode.</td>
</tr>
<tr>
<td><img src="image" alt="CH\System Pump Off" /></td>

For 399MBH Boiler
(This boiler must be piped with a primary loop)

*These charts are valid for piping diagrams on pages 14 & 18*

Instructions:
1. Pipe diameter determines pump size. Smaller the diameter of pipe, larger the pump. 399 Mbh boiler can be piped in 1¼" pipe. Use charts 1-2 to determine pipe size and respective pump size.
2. Fill in chart using the 1¼" section first. Then consult chart 3 for pump selection.
3. Pump size may be decreased by decreasing equivalent length of pipe. Use larger diameter pipe as primary loop to decrease equivalent length. Use charts 2 or 3.

Note: The Figure below are based on industry average. Consult valve/fitting manufacturer for exact equivalent length or for fittings not shown below.
