1.1 Designated Use
- Hot water heating boiler.
- Indoor installation.
- Closet or alcove installation.
- Direct vent or single vent pipe boiler.
- For use with natural gas or liquefied petroleum gases (LP/propane).

1.2 The unit MUST NOT:
- Directly heat potable water. Indirect heating is acceptable.
- Heat water with non-hydronic heating system chemicals present (example, swimming pool water).
- Exceed 150 psig (1.03 MPa) maximum allowable working pressure.
- Exceed 195°F (90.5°C) system design temperature.

1.3 Operational Features
- Modulating: 20-100%.
- Integral Dual Limit.
- Connection provided for required field sourced low water cutoff (LWCO).
- Outdoor Temperature Reset.
- Integral Multiple Boiler Control.
- Heat exchanger over heat protection.
- Alternate mounting of User Interface

Check our website frequently for updates: www.ecrinternational.com

Information and specifications outlined in this manual in effect at the time of printing of this manual. ECR International reserves the right to discontinue, change specifications or system design at any time without notice and without incurring any obligation, whatsoever.
2.1 **General**

Boiler installation shall be completed by qualified agency. See glossary for additional information.

---

**WARNING**

Fire, explosion, asphyxiation and electrical shock hazard. Improper installation could result in death or serious injury. Read this manual and understand all requirements before beginning installation.

---

2.2 **Become familiar with symbols identifying potential hazards.**

This is the safety alert symbol. Symbol alerts you to potential personal injury hazards. Obey all safety messages following this symbol to avoid possible injury or death.

---

**DANGER**

Indicates a hazardous situation which, if not avoided, WILL result in death or serious injury.

---

**WARNING**

Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

---

**CAUTION**

Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

---

**NOTICE**

Used to address practices not related to personal injury.

---

2.3 **Installation shall conform to requirements of authority having jurisdiction or in absence of such requirements:**

- United States
  - National Electrical Code, NFPA 70.

2.4 **Where required by authority having jurisdiction, installation shall conform to Standard for Controls and Safety Devices for Automatically Fired Boilers, ANSI/ASME CSD-1.**

Additional manual reset low water cutoff may be required.

2.5 **Requirements for Commonwealth of Massachusetts:**

Boiler installation must conform to Commonwealth of Massachusetts code 248 CMR which includes but is not limited to:

- Installation by licensed plumber or gas fitter.
3.1 Component Listing - Refer to diagrams on following pages.

2. **Vent Connector**  See section 6.

3. **Combustion Air Inlet (2"/3")**  See section 6.

4. **Igniter**

5. **Flame Sensor**

6. **Sight Glass**  Permits observation of burner flame.

7. **Flue Air Mixture Pressure Test Port** - Not available on all models.

8. **User Interface**  Displays information regarding boiler condition. Allows adjustment of boiler operating parameters. NOTE: Does not replace thermostat used to control central heating space.

9. **Boiler Control Module**

10. **Heat Exchanger**

11. **ASME Plate**

12. **Low Voltage Terminal Strip**  Connection of all low voltage wiring, including thermostat.

13. **Return Water Temperature Sensor**

14. **Return Water From Heating System (In) and Drain Valve**  Connection supplied at bottom of boiler. See section 5.

15. **Condensate Drain**  Boiler produces a liquid (condensate) as a by-product of combustion. (See page 14)

16. **Condensate Trap (Field Installed)**  Condensate must be piped to appropriate drain. See section 6.

17. **Jacket Panel Latch**

18. **Supply Water Outlet to Heating System (Out)**  Connections supplied for connecting from bottom of boiler. See section 5.

19. **Temperature Pressure Gauge (Field Installed)**

20. **High Voltage Junction Box**  For connection of 120V components. See section 8.

21. **Flue Collector**

22. **Vent Temperature Sensor**

23. **Combustion Analysis Test Port**

24. **Gas (Control) Valve**  Delivers proper quantity of fuel to Combustion Air Blower. See section 7.

25. **Combustion Air Blower**  Delivers proper quantity of combustion air, receives fuel from gas valve, mixes air and fuel sending mixture to burner for combustion.

26. **Heat Exchanger Surface Temperature Switch**

27. **Supply Water Temperature Sensor and High Limit Switch**

28. **Safety Relief Valve**  Factory supplied, Field installed. See section 5.

29. **Pump Relay**

30. **Burner**  not shown (see page 39)

31. **Wall Hanging Support Bracket**  not shown (see page 12) Integral to boiler. Allows wall mounting when used with supplied wall mounting bracket. See section 4.

NOTE:
See Section 5 For Piping Instructions
4.1 **Boiler Location Considerations**

- Ambient room temperature always above 32°F (0°C) to prevent freezing of liquid condensate.
- Approved for installation in closets.
- Protect gas ignition system components from water (dripping, spraying, rain, etc.) during operation and service (circulator replacement, condensate trap, control replacement, etc.).
- Wall mount, optional floor stand available.
- Determine alternate User Interface mounting location if desired. See page 81 - Optional User Interface Relocation.
- Access to outdoors to meet minimum and maximum pipe lengths for combustion air and vent piping. See section 6.
- Disposal of condensate. See section 6.
- Drainage of water (or water - antifreeze solution) during boiler service or from safety relief valve discharge. See section 5.
- Access to system water piping, gas supply, and electrical service. See sections 5, 7 and 8.
- Clearances to combustible materials and service clearances. See Table 2 and figure 4-1.
- Multiple Boilers can be wall mounted, placed side by side, or back to back.

4 - LOCATING BOILER

4.2 Pre-pipe supply and return water connections with factory fittings before wall mounting.

4.3 Wall Mounting
Mount boiler on wall using wall mounting bracket included with unit.
- Structure must be capable of supporting boiler weight plus 60 lbs (28 kg). See Table 1, page 2.
- Wall mount bracket has 4 slots allowing mounting on two (2) wall studs spaced at 11½" to 16½" on center. See figure 4-2.
- Boiler includes (4) 3/8" x 3" lag screws and (4) washers for attaching wall mount bracket to wood studs. Field source appropriate fasteners for other wall constructions (masonry, concrete).
- Attach wall mount bracket level on wall.
- Boiler must engage with wall mount bracket.
- Avoid overhang on sides of wall mount bracket. Verify boiler bracket is centered on wall bracket. See figure 4-2.

⚠️ WARNING
Fire, explosion hazard. Mount boiler vertically or slightly tilted backward to insure proper function of low water cutoff. Failure to follow these instructions could result in death or serious injury.
- When mounting boiler onto wall insert two plastic stoppers and two plastic plugs to packaging holes on back of boiler. See parts listed on page 2, number 15 and 16.

⚠️ CAUTION
Boiler weight exceeds 75 pounds (34 kg). Do not lift boiler onto wall without assistance.

Notice
Lift boiler using chassis. Using front jacket, vent piping, water or gas fittings to lift boiler may cause damage to the boiler.
5.1 General

- Install piping in accordance with authority having jurisdiction.

**NOTICE**

- Use two (2) wrenches when tightening boiler's fitting and pipes. Boiler's internal piping can be damaged if subjected to excessive torque.

- Support system piping and safety relief valve discharge piping. Boiler's internal piping and wall mount bracket can be damaged if subjected to excessive weight.
- Size central heating pump (and domestic hot water pump, if used) for system requirements only.
- Thoroughly clean and flush system before connecting to boiler.
- If oil is present in system water, use approved detergent to wash system.
- Flush system to remove any solid objects such as metal chips, fibers, or Teflon tape, etc.

5.2 Special Conditions

- System piping exposed to freezing conditions: Use inhibited propylene glycol solutions certified by fluid manufacturer for use with closed water heating system. Do not use automotive or ethylene glycol.
- Boiler used in connection with refrigeration system. Install piping in parallel with boiler, with appropriate valves to prevent chilled medium from entering boiler.
- System piping connected to heating coils located in air handling unit exposed to refrigerated air circulation. Install flow control valves or other automatic means to prevent gravity circulation of boiler water during cooling cycle.

5.3 Safety Relief Valve

**NOTICE**

- Boiler rated at 150 psig (1.03 MPa) maximum allowable working pressure. Boiler provided with 30 psig (206 kPa) safety relief valve. Field source safety relief valve for system pressures greater than 25 psig. Temperature Pressure Gauge satisfactory for 60 psig operation. Field source temperature pressure gauge for system pressures greater than 60 psig.
- Install safety relief valve. See figure 5-1
- Install safety relief valve with spindle in vertical position.
- Do not install shutoff valve between boiler and safety relief valve.
- Install discharge piping from safety relief valve. See figure 5-2.
  - Use ¾" or larger pipe.
  - Use pipe suitable for temperatures of 375°F (191°C) or greater.

**WARNING**

- Poison hazard. Ethylene glycol is toxic. Do not use ethylene glycol.
- Never use automotive or standard glycol antifreeze, even ethylene glycol made for hydronic systems.
- Ethylene glycol can attack gaskets and seals used in hydronic systems.
- Use only inhibited propylene glycol solutions certified by fluid manufacturer as acceptable for use with closed water heating system.
- Thoroughly clean and flush any system that used glycol before installing new Boiler.
- Provide user with Material Safety Data Sheet (MSDS) on fluid used.

**NOTICE**

Do not expose boiler and condensate piping to freezing temperatures.
• Individual boiler discharge piping shall be independent of other discharge piping.
• Size and arrange discharge piping to avoid reducing safety relief valve relieving capacity below minimum relief valve capacity stated on rating plate.
• Run pipe as short and straight as possible to location protecting user from scalding and properly drain piping.
• Install union, if used, close to safety relief valve outlet.
• Install elbow(s), if used, close to safety relief valve outlet and downstream of union (if used).
• Terminate pipe with plain end (not threaded).
• Arrange piping to prevent water dripping onto boiler.

5.4 Trim Piping
• Temperature - Pressure Gauge. Install temperature pressure gauge using adapter, tee and bushing provided with boiler. See figure 5-3.
• Protect chassis grommets from heat damage.
• Drain Valve. Install drain valve using tee and adapter provided with boiler. See figure 5-3.

5.5 System Piping
• See Table 3 for basic system piping configurations.
• Systems with automatic fill valves require back flow prevention device.
• Single boiler system. See figures 5-4A, 5-5, 5-6, 5-7A & B for general guidance. Additional considerations:
  • Boiler control is designed for single central heating pump. Installer responsible for integration of multiple central heating pumps.
  • Boiler control allows domestic hot water prioritization. Function could be lost if central heating pump not directly connected to control system.
• Multiple boiler system. See figures 5-8A, B & C for general guidance. Additional considerations:
  • Control system requires equivalent water temperatures entering each boiler to properly sequence and adjust system supply temperature.
  • Install multi boiler sensor kit. See "Parts, Kits & Optional Accessories" manual for part number.
• Low Water Cutoff (LWCO). See figures 5-4A for minimum probe height. Do not install shutoff valve between boiler and LWCO probe.
  • If boiler is below radiation level, use figure 5-4A. Boilers above radiation level use figures 5.4B thru 5.4D.
  • If using separate stand pipe, install air vent using tee to avoid nuisance shutdowns.
  • See figures 5-4B, 5-4C and 5-4D for suggested probe location alternatives.
  • Arrange piping to prevent water dripping onto boiler.

6.1 General
This boiler requires a dedicated direct vent system. Install combustion air and vent piping in accordance with these instructions, authority having jurisdiction, and:
Vent connections serving appliances vented by natural draft shall not be connected into any portion of mechanical draft systems operating under positive pressure.
Install vent system in accordance with these instructions.

6.2 Removal of Existing Boiler From Common Vent System
When existing boiler is removed from common venting system, common venting system is likely to be too large for proper venting of appliances remaining connected to it.
After removal of existing boiler, following steps shall be followed with each appliance remaining connected to common venting system placed in operation, while other appliances remaining connected to common venting system are not in operation:
- Seal any unused openings in common venting system.
- Visually inspect venting system for proper size and horizontal pitch. Determine there is no blockage or restrictions, leakage, corrosion, and other deficiencies which could cause an unsafe condition.
- When practical, close all building doors, windows, and all doors between space in which appliances remaining connected to common venting system are located and other spaces of building. Turn on clothes dryer and any appliance not connected to common venting system. Turn on exhaust fans, such as range hoods and bathroom exhaust so they will operate at maximum speed. Do not operate summer exhaust fan. Close fireplace dampers.
- Turn on appliance being inspected. Follow lighting instructions. Adjust thermostat so appliances will operate continuously.
- Test for spillage at draft hood relief opening after 5 minutes of main burner operation. Use flame of match or candle, smoke from cigarette, cigar or pipe.
- Determine each appliance remaining connected to common venting system properly vents when tested as outlined above. Then return doors, windows, exhaust fans, and any other gas-burning appliance to their previous condition of use.
- Any improper operation of common venting system should be corrected so installation conforms with National Fuel Code, ANSI Z223.1/NFPA 54 and/or Natural Gas and Propane Installation Code, CAN/CSA B149.1. When re-sizing any portion of common venting system, common venting system should be re-sized to approach minimum size as determined using appropriate tables in Chapter 13 of the National Fuel Gas Code, ANSI Z223.1/NFPA 54 and/or Natural Gas and Propane Installation Code, CAN/CSA B149.1.

6.3 Venting Materials
- See Table 4

- IPEX is approved vent manufacturer in Canada listed to ULC-S636.
- IPEX System 636 Cements and Primers are approved in Canada listed to ULC-S636.

Use of cellular core PVC (ASTM F891), cellular core CPVC, or Radel®, (Polyphenolsulfone) in venting systems shall be prohibited.

WARNING
Use of cellular core PVC for venting flue gas could result in death, or serious injury.

WARNING
Covering non-metallic vent pipe and fittings with thermal insulation shall be prohibited.
• Minimum and maximum combustion air and vent pipe lengths listed in Table 5. Pipe length counted from combustion air connector to termination.

• Install field-sourced 2" to 3" transition, if used, in vertical section at combustion air inlet and vent connector.

• 90° elbows equivalent to 5.0 ft (1.6 m). 45° elbows equivalent to 3.5 ft (1.1 m). 2" to 3" transition has no equivalent length. See Table 6.

• Use flexible Polypropylene piping (PP) in a vertical position only. Check PP pipe manufacturer for details. Each foot of PP flexible pipe is equivalent to 2% feet of smooth pipe of same diameter.

• Slope vent pipes minimum 1/4" per foot (21 mm/m) back toward boiler. Support horizontal sections to prevent sags capable of accumulating condensate.

• Support piping in accordance with pipe manufacturer’s instruction and authority having jurisdiction. In absence of manufacturer’s instruction use pipe hooks, pipe straps, brackets, or hangers of adequate and strength located at intervals of 4 ft (1.2m) or less. Allow for expansion/contraction of pipe.

• Combustion air and vent piping must be air tight and water tight.

• Certified vent system components must NOT be interchanged with other vent systems or unlisted pipe/fittings.

6.5 Vent Termination

• Terminate combustion air and vent pipes with fittings or concentric vent kit.
  A. See "Parts, Kits and Optional Accessories" manual for concentric vent kit part numbers.
  B. Use horizontal pipe for vent and 90° elbow for combustion air termination when using fittings.

• Terminate combustion air and vent pipes in same atmospheric pressure zone through exterior sidewall or roof.

• Locate combustion air termination as far as possible from swimming pool, swimming pool pump house, and other sources of airborne chlorine.

• Locate combustion air and vent terminals as required by authority having jurisdiction.

6.9 Condensate Piping

• Use materials acceptable to authority having jurisdiction. In absence of such authority:
  • USA - PVC or CPVC per ASTM D1785/D2845 Cement or primer per ASME D2564 or F493.

### WARNING

Vent extending through exterior wall shall not terminate adjacent to wall or below building extensions such as eaves, balconies, parapets or decks. Failure to comply could result in death or serious injury.

#### Table 5 - Combustion Air and Vent Piping Length

<table>
<thead>

NOTICE
Use of vent covers may cause freezing. If using vent covers overall vent length must be considered. Failure to heed this information may compromise operation of this boiler.
6 - COMBUSTION AIR AND VENT PIPING

**FIGURE 6-1 Two Pipe Roof Vent**

- 3” (76mm) Minimum horizontal separation between combustion air intake and vent of same appliance.
- 8” (203mm) Minimum vertical separation between combustion air intake and vent of different appliances.
- 15” (381mm) Maximum horizontal length of vent.
- Minimum vent/intake between different appliances 12” (305mm).
- Maximum allowable total vertical vent length with outside exposure is 10 ft. (3.05m).
- Abandoned unused masonry chimney may be used as chaseway for combustion air and vent. Both combustion air and vent pipe must exit above top of chimney with clearances as shown in figure 6-1.

**FIGURE 6-2 Two Pipe Side Wall Vent**

- 3” (76mm) Minimum separation between combustion air intake and vent terminations.
- 8” (203mm) Minimum vertical separation between combustion air intake and vent terminations.
- 12” (305mm) Separation between bottom of combustion air intake and bottom of vent.
- Multiple terminations as shown in 6-1, 6-2, and 6-3 must be a minimum of 12” (305mm) horizontally between vent of one termination and air intake of next appliance.
- Maximum allowable total outside exposure vent length equals 10 ft. (3.05m).
- Maintain a pitch of 1/2” per ft. (13mm/m) outside exposure back to boiler to ensure proper condensate drainage for horizontal runs.
6 - COMBUSTION AIR AND VENT PIPING

FIGURE 6-4 Side Wall Concentric Terminal

1" (25.4mm) Maximum

Combustion Air

Vent

FIGURE 6-5 Side Wall Concentric Terminal Multiple Appliances

1" (25mm) Maximum

12" (305mm) Minimum

36" (0.9m (914mm) (28m)) Minimum

* See Note Below

Maintain 12" (30cm) US (18" (46cm) Canada) Clearance Above Highest Anticipated Snow Level Or Grade

*Must be less than 4" (102mm) or greater than 24" (610mm) Horizontal distance between end bells of each air intake to prevent flue gas recirculation.

FIGURE 6-6 Concentric Terminal Connection

*2 or 3" (51 or 77 mm) Diameter PVC intake/combustion air

Combustion Air

OD 3½" (89mm) - *2" (51mm) kit
OD 4½" (114mm) - 3" (77mm) kit

Note: Securing strap must be field installed to prevent movement of termination kit in side wall

1" (25.4mm) Maximum

**See Note

*2" (51mm) Diameter = 41" Length (1.1m)
3" (77mm) Diameter = 47" Length (1.2m)

** Note Overall length may be modified by cutting or extending both combustion air and vent pipes. 12" (305mm) is minimum allowable length and 60" (1.2m) is maximum allowable length for this dimension.

SDR-26 PVC (D2241) only may be used for extending pipes. Do not use Schedule 40 PVC or use couplings to extend pipes. Dimension will change if intake/vent pipes are lengthened or shortened.

* Note: 2" (51mm) For use with models 050/075/100.
3" (77mm) For use with models 075/100/150/200
Concentric Vent Roof Terminations

- Glue inner vent pipe to prevent recirculation.
- Maintain 12" (305mm) US (18"(457mm) Canada) minimum clearance above highest anticipated snow level. Maximum of 24"(610mm) above roof.
- Support must be field installed to secure termination kit to structure.
- Elbow, roof boot/flashing field supplied.
- Allowed Wall/Roof thickness 1/2"-30" (12.7mm - 762mm).
- Vertical concentric vent system can be installed in unused masonry chimney.
- Contact Technical Support 800-325-5479 for questions regarding installation or use.

Grade, Snow & Ice

Terminate vent system bottom, minimum 12" (305mm) above highest anticipated snow level.

Avoid locations where snow may drift and block vent and combustion air. Ice or snow may cause boiler to shut down if vent or combustion air becomes obstructed.

Doors & Windows

Combustion air and vent termination must be 12" (305mm) from or below doors, windows or gravity inlet.

* See Tables 4 & 5 Combustion air and Vent Piping Length Page 22.
FIGURE 6-10  Flue on Sidewall, Combustion Air on Roof

Maintain 12"(305mm) US (18"(457mm) Canada) clearance above highest anticipated snow level 24" (610mm) above roof

FIGURE 6-11  Flue on Sidewall, Inside Combustion Air

NOTICE
Configurations of single pipe vent with flue on sidewall, requires tee as vent terminal. See figures 6-10 and 6-11.
6.7 Side Venting Terminal Requirements of:

<table>
<thead>
<tr>
<th>Venting terminal from doors and windows</th>
<th>See figure 6-12</th>
</tr>
</thead>
<tbody>
<tr>
<td>Venting terminal from forced air inlet of other appliances</td>
<td>See figure 6-13</td>
</tr>
<tr>
<td>Venting terminal from snow level</td>
<td>See figure 6-14</td>
</tr>
<tr>
<td>Venting terminal from vegetation</td>
<td>See figure 6-15</td>
</tr>
<tr>
<td>Venting terminal from public walkway</td>
<td>See figure 6-16</td>
</tr>
</tbody>
</table>

**FIGURE 6-12**

**Doors & Windows**
Combustion air and vent termination must be 12" (305mm) from or below doors, windows or gravity inlet.

**Condensate**
Vent gas may condense, forming moisture, may be corrosive. Protect building materials at vent from exhaust of vent gas.

**FIGURE 6-13**

**Forced Air Inlet**
Terminate venting system 3' (0.9m) above and 10' (3.0m) from any forced air inlet (except boiler's combustion air inlet).

**FIGURE 6-14**

**Grade, Snow & Ice**
Terminate vent system bottom, minimum 12" (300 mm) above highest anticipated snow level.

Avoid locations where snow may drift and block vent and combustion air. Ice or snow may cause boiler to shut down if vent or combustion air becomes obstructed.

**"L" Corner**
Vent termination shall NOT be installed closer than 3' (0.9m) from inside corner of "L" shaped structure.
### FIGURE 6-15

**Vegetation, Plants & Shrubs**
Keep vent termination 3’ minimum (0.9m) away from vegetation. Position termination where vent vapors will not damage plants/shrubs or air conditioning equipment.

**Meters, Regulators, deck, porch**
Vent termination US only - 4’ (1.2m), Canada - 6’ (1.8m) horizontally from, no case above or below, electric meters, gas meters, regulators, and relief equipment, or under deck or porch.

### FIGURE 6-16

**Walkways**
Locate vent termination minimum 7’ (2.1m) above any public walkway, with consideration to condensate.

**People or Pets**
Locate combustion air and vent termination to prevent accidental contact with people or pets.

**Stones, Balls, Etc.**
Position combustion air and vent termination where it will NOT be damaged by foreign objects, such as stones, balls, etc.

**Vapors**
Position termination where vent vapors are not objectionable.

**Eddy, Flue Gases**
Position termination so it will not be effected by wind eddy, air born leaves, snow, or recirculated vent gases. Give consideration to excessive wind and locate away from windward side of building.

**Multiple Family Dwellings**
Vent shall not terminate directly above paved sidewalk or paved driveway located between two single-family dwellings serving both dwellings.
6.8 **Multiple Boiler Venting Installation**

- Multiple boiler application boiler shall be vented individually.
- Follow guidelines as described in figures 6-1 through 6-7. Canada - CSA or ULC certified PVC/CPVC pipe, fittings and cement.
- Attach condensate trap provided with boiler and field sourced piping to condensate drain at bottom of boiler. See figure 6-17.
- Slope condensate drain pipe minimum 1/4" per foot (21mm/m) away from boiler.
- Use field source condensate pump if boiler located below disposal point.
- Field source condensate neutralizing kit as required by authority having jurisdiction or for environmentally friendly condensate disposal.

![Condensate Drain](image)

**FIGURE 6-18 Condensate Drain**

- End must be left open.
- Condensate Trap (field installed) on condensate drain pipe
- Do not place in environment with temperatures below freezing. Condensate outlet will block if condensate freezes.
**7 - GAS SUPPLY PIPING**

**FIGURE 7-1A Gas Connection** (at top of Boiler)  
50/75/100 Shown

- Attach Supplied Gas Shutoff Valve (shown in open position)

**FIGURE 7-1B Gas Connection** (at top of Boiler)  
150/200 Shown

- 3/4" Nipple
- 1/2"x 3/4" Increaser
- Attach Supplied Gas Shutoff Valve (shown in open position)

---

**WARNING**

**WHAT TO DO IF YOU SMELL GAS**

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

**7.1 General**

- Use piping materials and joining methods acceptable to authority having jurisdiction. In absence of such requirements:
  - USA - National Fuel Gas Code, ANSI Z223.1/NFPA 54
- Size and install gas piping system to provide sufficient gas supply to meet maximum input at not less than minimum supply pressure. See Table 8.
- Support piping with hooks, straps, bands, brackets, hangers, or building structure components to prevent or dampen excessive vibrations and prevent strain on gas connection. Boiler will not support piping weight.
- Use thread (joint) compound (pipe dope) suitable for liquefied petroleum gas.
- Install manual main shutoff valve outside of jacket. See figures 7-1A and 7-1B.

**7.2 Conversion Kit Instructions**

- See Gas Conversion Kit Instructions included with Boiler.

---

**NOTICE**

Use two (2) wrenches when tightening boiler fittings and pipes. Boiler's internal piping can be damaged if subjected to excessive torque.

**Table 8 - Gas Supply Pressure**

**Note:** See Glossary - Piping Table 16
7.3 Leak Check Gas Piping

7.3 Pressure test boiler and gas connection before placing boiler in operation.

- Pressure test over 1/2 psig (3.5 kPa). Disconnect boiler and its individual gas shutoff valve from gas supply system.
- Pressure test at 1/2 psig (3.5 kPa) or less. Isolate boiler from gas supply system by closing manual gas shutoff valve. See figure 7-2 and 7-4.
- Locate leakage using gas detector, noncorrosive detection fluid, or other leak detection method acceptable to authority having jurisdiction. Do not use matches, candles, open flames, or other methods that can provide ignition source.
- Correct leaks immediately and retest.

DANGER
Fire Hazard. Do not use matches, candles, open flames, or other methods providing ignition source. Failure to comply will result in death or serious injury.
8.1 General
Electrically bond boiler to ground in accordance with requirements of authority having jurisdiction. Refer to:
• USA- National Electrical Code, ANSI/NFPA 70.

8.2 Electric Knockouts (figure 8-1)
• Six knockouts located on bottom of chassis.
  A. Four knockouts located under junction box are reserved for high voltage wires. Choose connectors using total diameter of wire bundles.
  B. Two knockouts located to right of high voltage knockouts (outside of junction box) are reserved for low voltage wiring. Use supplied grommets when using these knockouts.

8.3 Line Voltage Connections (figure 8-2)
• Boiler
  A. Provide individual 120V, 15 amp circuit (recommended) with fused disconnect or service switch as required by authority having jurisdiction.
  B. Open High Voltage Junction Box (see figures 3-4 and 3-5) to access line voltage terminal strip.
  C. Connect 120 VAC circuit to line voltage terminal strip 120 VAC L,N,G.

• Central Heating Pump
  A. Isolate pump from control module if pump FLA (Full Load Amps) exceeds maximum allowable current draw. See Figure 8-3 and Table 9.
  B. Connect pump to line voltage terminal strip CH PUMP L,N,G.

• Domestic Hot Water Pump
  A. Isolate pump from control module if pump FLA exceeds maximum allowable current draw. See Figure 8-3 and Table 9.
  B. Connect pump to line voltage terminal strip DHW PUMP L,N,G.
  C. PUMP L,N,G.

• Primary Pump
  A. Isolate pump from control module if pump FLA exceeds maximum allowable current draw. See Figure 8-3 Table 9.
  B. Connect pump to line voltage terminal strip primary pump, L, N, G.

8.4 External Connections (figure 8-4)
• User Interface Terminals
  A. Factory wired to USER INTERFACE terminals
  B. Optional - Remote mount user interface for improved access. Use low voltage knockout.
  C. Maximum wire length is 100 ft (30m) for 22 ga. wire, or 150 ft (45m) for 18 ga. wire.

• Argus Link (Multiple boiler applications only)

WARNING
Electrical shock hazard. Turn OFF electrical power supply at service panel before making electrical connections. Failure to do so could result in death or serious injury.

NOTICE
Wiring diagrams can be found in Section 14 of this Manual.

FIGURE 8-1 Electric Knockouts Bottom Of Boiler

</tbody>
</table>

If CH or DHW pump current is more than the maximum allowable current draw install proper field sourced relays as shown in figure 8-3. Maximum allowable total amperage of all 3 pumps must not exceed 20 amps.
8 - ELECTRICAL CONNECTIONS

• Outdoor Sensor, if used.
  A. Provided with boiler.
  B. Locate outdoor sensor to protect against wind and direct sunlight. Mounting instructions provided with sensor.
  C. Maximum wire length is 100 ft (30m) for 22 ga. wire, or 150 ft (45m) for 18 ga. wire.
  D. Connect wires to OUTDOOR SENSOR terminals. Wires are interchangeable.

• System Sensor (Multiple boiler applications only)

• Domestic Hot Water (DHW) Thermostat, if used.
  A. Use temperature control with dry contacts rated at 0.5 amps @ 120 VAC. Boiler control does not provide power to DHW temperature control.

**NOTICE**
IMPORTANT: Do not apply power to DHW T-T terminals. Dry contact only, use of isolation relay may be necessary.

  B. Maximum wire length is 330 ft (100m) 22 gauge wire.
  C. Connect wires (interchangeable) to DHW T-T terminals. Wires are interchangeable.

• Central Heating Thermostat
  A. Use thermostat or boiler system control with dry contacts related 0.5 amps @ 120 VAC. Boiler control does not provide 24 VAC power to central heating thermostat.
  B. Locate and install thermostat per manufacturer's instructions. Maximum wire length is 330 ft (100m) for 22 ga. wire.
  C. Connect wires to CH T-T terminals. Wires are interchangeable.

• Low Water Cutoff (LWCO)
  Connect LWCO switch leads to terminals provided. See Figures 14.1 thru 14.4 for wiring diagrams. Provide power to LWCO per manufacturer's instructions.

**NOTICE**
Boiler transformer does not have adequate VA to power accessories, including LWCO.

**FIGURE 8-4 External Connections** (Do not apply external voltage to external terminals.)
### 9.1 Fill Boiler With Water And Purge Air

**NOTICE**
To maintain boiler efficiency and prevent boiling inside the heat exchanger, flush entire heating system until clean.

- Flush heating system, including all heating zones.
- Fill boiler with potable water.
- Fill boiler and system piping with water (or antifreeze-water solution, if used). See antifreeze information page 13. Purge air from boiler using safety relief valve. Purge air from system piping.
- Inspect system piping and boiler connections. Repair any leaks immediately.
- Activate all heating zones and calls for heat, including CH calls and DHW calls (if available).
- Close manual gas shut off valve. Let system run for 30 minutes. When boiler goes into lockout, reset boiler by pressing "Reset" button until boiler resets.
- Do not open gas shutoff valve until all air is purged from system.

### 9.2 Fill Condensate Trap with Water

- Remove spring tension clip from clear hose attached to barbed fitting at bottom of boiler chassis. See figure 9-1.
- Disconnect hose from barbed fitting.
- Remove barbed fitting from boiler.
- Attach supplied condensate trap to barbed fitting using pipe tape.
- Fill trap through fitting with approximately 2 cup (473 ml) water.
- Place barbed fitting back through bottom of chassis.
- Reassemble clear tube to barbed fitting.
- Secure tube to barbed fitting with spring tension clip. See figure 9-1.
9.3 Program Boiler Control

Boiler is factory programmed with following factory default settings, Table 10.
Parameters can be adjusted to suit particular application using the user interface. See figure 9-2.
Detailed explanation of each can be found in Appendix A - Control Module.
List parameters in event of factory default parameters are changed.

* List parameters when factory default settings are changed.
9.4 Boiler Start-up and Operational Test
1. Verify air is purged from hydronic piping
2. System test pumps - verify each pump is operational
3. Verify gas piping
   • Confirm pressure test. See section 7.3 page 33.
   • Visually inspect piping to determine there are no open fittings or ends, and all valves at unused outlets are closed and plugged/capped.
   • Purge air from piping
   • Check piping and connections for leaks immediately after gas is turned on. Shut off gas supply and make necessary repairs if leaks found.
4. Follow OPERATING INSTRUCTIONS to initiate boiler operation. See section 10.
5. Inspect combustion air and vent piping. Verify pipe is not leaking and terminations are unobstructed and vent gas discharge is not a nuisance or hazard.
6. Verify boiler functions.
7. Inspect condensate disposal system. Verify condensate flows adequately and is disposed properly.
8. Check control module operation.
9. Check field sourced limits, low water cutoffs, etc. per manufacturer's instructions.

9.5 Check Combustion
Natural Gas
1. Measure input. English units*
   • Turn off gas to all other appliances.
   • Activate some heating zones to dissipate heat.
   • Operate boiler for 10 minutes, prior to sampling with analyzer.
   • Set boiler on high fire.
   • Use ½, 1 or 2 cu ft dial on gas meter. Measure time required for one or more complete revolutions. Measure time for 1-2 minutes.
   • Calculate input.

   \[
   \text{Input (MBH)} = \frac{3600 \times \text{cu ft}}{\text{seconds}}
   \]

   Example: Gas flow from
   Meter = 2 cu ft
   Measured time = 72 seconds

   \[
   \text{Rate (MBH)} = \frac{3600 \times 2 \text{ cu ft}}{72 \text{ seconds}} = 100 \text{ MBH}
   \]

   *
   Metric - See Glossary

2. Compare measured input to table. Adjust input rate if needed using Table 11 below.

Table 11 - Rate @ High Fire

<table>

Natural Gas and Propane
3. Measure CO₂ at high fire and compare to table. Adjust CO₂ if needed using figure 9-3. See figure 9-5 for combustion air analyzer port.
**NOTICE**

Contact Technical Support @ 800-325-5479 for additional information or assistance.

<table>
<thead>
<tr>

<tr>
<td>Natural Gas</td>
<td>9.0</td>
<td>9.5</td>
</tr>
<tr>
<td>Propane</td>
<td>10.0</td>
<td>11.0</td>
</tr>
</tbody>
</table>

**Natural Gas only**

4. Measure input. Compare to table above. Continue to measure input and CO₂ until both measured values are within range specified in tables.

**Propane Gas**

Most propane systems do not have flow meters.

1. Check CO₂. Propane should be between 10% and 11.0%.
   - If CO₂ is low increase gas flow following figure 9-3.
   - If CO₂ is high decrease gas flow following figure 9-3.

**FIGURE 9-3 Gas Valve - Models**

- To increase gas flow turn 'throttle' left or counter clockwise.
- To decrease gas flow turn 'throttle' right or clockwise.
- Limit adjustment to one turn and retest.

**Verify Burner, Proper Operation**

1. Inspect burner flame through Sight Glass. See figure 11-1.
2. Operate boiler through several heating cycles, including domestic hot water, if used. Verify proper operation.
9.6 Perform CSD-1 Compliance Test (see paragraph 2.4 page 6)
Verify operation of boiler safety control operation with regard to no flow conditions as follows:
1. Turn off boiler using boiler service switch.
2. Disable primary boiler pump. Disconnect multi pin connector J7 from control module. See figure 9-8.
3. Disable secondary system pumps attached to system.
5. Boiler will fire. Based on natural convection within boiler, boiler will either:
   OR
   B. Shut off burner E40 "Return Water Temp". This is a soft lockout. When water temperature drops below limit boiler will automatically refire then Lockout A-06 requiring manual reset of control module. Press Reset button on User Interface.
   OR
   C. Shut off burner E39 "Flue Temperature Sensor". This is a soft lockout. When flue sensor drops below limit, boiler will automatically refire then Lockout A-06 requiring manual reset of control module. Press Reset button on User Interface.
6. After safety operation is verified, turn off boiler via service switch. Remove jumper in T-T. Replace J7 connector into control module, enable secondary pump operation, turn service switch on and restart system to verify operation. See figure 9-6 page 41.
7. Verify field sourced external low water cutoff (LWCO) is functional.

WARNING
Asphyxiation hazard. Carbon monoxide is odorless, tasteless, clear colorless gas, which is highly toxic. Verify cap is firmly placed on combustion analyzer port to prevent CO emission. Failure to do so could result in death or serious injury.
9 - START UP PROCEDURE

9.7 Complete Start Up Procedure

1. Reset control parameters to operating settings if adjusted to allow startup and operation test.

2. Follow instructions TO TURN OFF GAS TO APPLIANCE (page 41) if boiler is not being placed into immediate operation.

3. Enter installer information on Warranty Registration Card.

4. Gather all instructions, manuals, wiring diagrams, warranty registration card and other supporting information. Review with user and/or affix in conspicuous location adjacent to boiler.
FOR YOUR SAFETY READ BEFORE OPERATING

**WARNING**

If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- This appliance is equipped with an ignition device which automatically lights burner. Do NOT try to light this burner by hand.

- Before operating smell all around appliance area for gas. Be sure to smell next to floor because some gas is heavier than air and will settle to the floor.

- Use only your hand to turn the gas shutoff valve. Never use tools. If valve will not turn by hand, do not try to repair it, call a qualified service technician. Force or attempted repair may result in fire or explosion.

- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect appliance and to replace any part of control system and any gas control which has been under water.

---

**10.1 OPERATING INSTRUCTIONS**

*Stop! Read Safety information above.*

- Set thermostat to lowest setting.

- Turn "OFF" all electrical power to appliance.

- This appliance is equipped with an ignition device which automatically lights the burner. Do not try to light burner by hand!

- Remove upper jacket panel.

- Turn gas shutoff valve \(\bigotimes\) to closed position. Handle should be perpendicular to gas pipe.

- Wait 5 minutes for any gas to clear. Smell for gas, including near floor. If you smell gas, STOP! Follow instructions on this page: *What To Do If You Smell Gas.* If you do not smell gas, go to next step.

- Turn gas shutoff valve \(\bigotimes\) to the open position. Handle should be parallel to gas pipe.

- Replace upper jacket panel.

- Turn "ON" electrical power to appliance.

- Set thermostat to desired setting.

- If the appliance will not operate, follow instructions TO TURN OFF GAS TO APPLIANCE and call your service technician or gas supplier.

---

**CAUTION**

**WHAT TO DO IF YOU SMELL GAS**

- Do not try to light any appliance.

- Do not touch any electrical switch; do not use any phone in your building.

- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.

- If you cannot reach your gas supplier, call the fire department.

---

**10.2 TO TURN OFF GAS TO APPLIANCE**

- Set thermostat to lowest setting.

- Turn "OFF" all electric power to appliance if service is to be performed.

- Remove front jacket panel.

- Turn gas shutoff valve handle \(\bigotimes\) to closed position. Handle should be perpendicular to gas pipe.

- Replace front jacket panel.

---

**FIGURE 10-1 Gas Shutoff Valve** - Shown 50/75/100 Model
11.1 Beginning of Each Heating Season

- Check boiler area is free from combustible materials, gasoline, and other flammable vapors and liquids.
- Visually inspect combustion air and vent piping for proper operation. Check for and remove any obstruction to flow of combustion air or vent gases. Immediately repair or replace pipe showing deterioration or leakage. Reassemble per instructions in section 6. Ensure proper reassembly and resealing of system.
- Visually inspect condensate drain line for proper operation. Checking for deteriorated or plugged condensate drain line. Verify condensate trap drains freely.
- Test safety relief valve for proper operation. Refer to valve manufacturer's instructions packaged with relief valve.
- Examine flue passages in heat exchanger, burner, condensate lines, and cleaning (if necessary) by following instructions in “Annual Examination and Cleaning of Boiler Components” in this section.
- Combustion air blower motor furnished with boiler are permanently lubricated from factory and require no further lubrication. Lubricate field sourced pumps and/or motors according to pump and/or motor manufacturer's instruction.
- Check following components are operating properly and are free of blockages or obstructions:
  - system air vent;
  - check venturi air inlet for blockage and clean as required;
  - verify pressure test port cap and combustion test port are in place;
  - return temperature sensor clip must be securely seated on pipe; Check boiler for any sign of leaks.
- Check field sourced low water cutoff according to relief valve manufacturer instructions.
- Check flame signal with user interface. Should be 8 microamps at 100% firing rate (High fire).
- Visual inspection of flame through sight glass. Burner should be fully illuminated. See figure 11-1.
- Check heating system expansion tank.

**DANGER**

Before servicing, turn off electrical power to boiler at service switch. Close manual gas valve to turn gas supply OFF to boiler. Failure to comply will result in death or serious injury.

**CAUTION**

Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

**NOTICE**

Verify proper operation after servicing.

**NOTICE**

Perform regular service and maintenance by qualified service agency at least once every 12 months to assure safe, trouble free operation and maximum efficiency.

**FIGURE 11-1 Sight Glass**  -  Shown 50/75/100 Model

**SIGHT GLASS**
### 11.2 Annual Shut Down Procedure

- Follow instructions “To Turn Off Gas To Appliance” unless boiler is also used to supply domestic hot water. See section 10.
- Drain system completely if system does not have antifreeze when heating system is to remain out of service during freezing weather.
- Drain condensate lines when boiler is to be exposed to freezing temperatures.

**WARNING**

Following service procedures must be performed by qualified service agent. Boiler owner shall not attempt these steps. Failure to do so could result in death or serious injury.

### 11.3 Annual Inspection and Cleaning of Boiler Components

- Obtain Burner Inspection Kit. Follow kit instructions to prepare for examination and cleaning.
- Burner and heat exchanger inspection and cleaning.
  - Remove gasket and burner. Allow burner to clear top lip of chassis.
  - Remove any residual sleeve and/or gasket material from removed burner.
  - Clean burner using air hose directed into top of burner opening to dislodge any debris in burner ports. Inspect burner for foreign matter in flame ports or inside burner. Remove foreign matter by blowing with compressed air or vacuuming. Replace burner if it cannot be cleaned or is showing deterioration.
  - Clean heat exchanger with low pressure water spray. Use flexible handle nylon brush to loosen sediment and oxide on all accessible heating surfaces of heat exchanger. Take care not to get brush stuck in heat exchanger.
  - Remove any remaining loosened sediment using shop vacuum with snorkel attachment.
  - Clean condensate collector if significant debris found in heat exchanger.
  - Expand upper spring tension clip of condensate trap using hose clamp pliers. Disconnect condensate trap from condensate collector. See figures 11-2.
  - Disconnect wire harness from vent temperature sensor. See figure 11-2.
  - Loosen upper hose clamp securing condensate collector to flue pipe using 3/8" socket with 6" extension.
  - Remove 1/4-20 hex flange nuts securing condensate collector to heat exchanger using 7/16" deep well socket. See figures 11-2.
  - Remove condensate collector assembly from heat exchanger and flue pipe.
  - Flush collector and condensate trap with water.
- Follow Burner Inspection Kit instructions to reassemble boiler and resume operation.
12.1 Ratings and Capacities

- Constructed and hydrostatically tested for maximum allowable working pressure of 150 psig (pounds per square inch gauge) (1035 kPa) in accordance with ASME Boiler and Pressure Vessel Code, Section IV, Rules for Construction of Heating Boilers.

- Ratings used for elevations up to 2000 ft (600m) above sea level.

- For elevations between 2000 ft (600m) and 4500 ft (1350m), install high altitude control kit

- For elevations above 4500 ft (1350m) install high altitude control kit and:
  - USA - Reduce input rate 4% for each 1000 ft (300m) beyond 4500 ft.
If boiler does not function.

Remove Jacket.
Is User Interface lit?

NO YES

Check for 120 vac in boiler high voltage terminal box.
Is 120 vac present?

NO YES

Check power supply to boiler. Check breakers, disconnect and emergency switch for voltage. Fix or repair external wiring.

Locate fuse holder on front of control and pull to check fuse. Spare fuse located on controller. Make sure all wire harness plugs are properly pushed in. Release plug lock with finger, remove and reconnect all 7 plugs. Check wiring from User Interface to Low Voltage Terminal Strip including checking continuity of wires. Does User Interface Display work?

NO YES

Remove User Interface from base. Using Digital Voltmeter check for 25 to 30 Vdc. Is voltage present?

NO YES

Replace Control Module

Replace User Interface

Does display show "Standby - No Demand?"

YES NO

There is no call for heat or hot water. Check thermostat. Outdoor air sensor may be faulty - boiler in warm weather shutdown.

Lockout Alarm  A 0 0
Blocking too long error

Enter Installer Menu, Boiler Status. Scroll to most recent Lockout Alarm or Blocking Error. Diagnose corrective action using appropriate Troubleshooting Tree.

Unplug connector on supply sensor. Measure continuity of high limit sensor (close/open signal) between two pins connected to two purple wires. Is continuity available?

- YES - NO

Is wire harness connected to both Gas Valve and J13 connector on Control Module?

- YES - NO

Disconnect J13 connector on gas valve. Measure resistance across top and bottom pins (1 & 5). Is resistance between 1.0 and 1.2 kΩ?

- YES - NO

Replace Control Module

Disconnect harness from Gas Valve. Does each wire have continuity between Gas Valve and Control Module

- YES - NO

Replace Gas Valve

Replace Harness

Is supply pipe (copper pipe at top of boiler) hot?

- YES - NO

Boiler has been dry fired. System has too much air. Close manual gas valve (shut off gas). Purge air from system, wait for system to cool.

Replace Supply Sensor
Error shows when safety circuit is open. Remove J13 connector from control module. Check for continuity between two pins connected to two pink wires, is continuity available?

- **YES**
  - Replace Control Module
- **NO**
  - Unplug molex connector on supply temperature sensor. Check continuity between two pins on sensor (two pins connected to two pink wires). Is continuity available?
    - **YES**
      - Check for loose connections on two pink wires on J13 connector, supply sensor, and safety temperature switch.
    - **NO**
      - Replace Wire Harness

Boiler fired without enough water flow through heat exchanger. Heat exchanger is over heated. Either high limit or heat exchanger temperature switch is open.

- Check the following:
  - Air in system?
  - Verify water flow in system piping
  - Flush system if water is dirty.

Let all zones run until water temperature drops.

- **YES**
  - Is Heat Exchanger surface hot?
    - **YES**
      - Check high limit and surface temperature switches
    - **NO**
      - Wait for boiler to cool down.
- **NO**
  - Check high limit and surface temperature switches
  - Replace Broken Switch

Is Combustion Air Blower operating?

YES \ NO

Disconnect 4-wire harness from Combustion Air Blower. Does Combustion Air Blower speed increase?

YES \ NO

Disconnect harness from Control Module J9. Continuity in each wire of 4-wire harness (yellow, red, white, black)?

YES \ NO

Replace Control Module \ Replace harness

Replace Combustion Air Blower

Are 3-wire and 4-wire harnesses connected to Combustion Air Blower?

YES \ NO

Disconnect harness from Control Module J9 connector. Measure voltage between two pins, J9-2 and J9-3 on Control Module (second and third pins of J9, count from outside). Is voltage 120 Vac +/- 10% available?

YES \ NO

Disconnect 3-wire harness from Combustion Air Blower. Measure continuity in each wire. Continuity in each wire?

YES \ NO

Replace Combustion Air Blower \ Replace harness

Replace Control Module

Connect harness
Disconnect harness from High Temperature Supply Switch and Control Module J13.
Check continuity of both purple wires. Continuity available for both purple wires?

- **YES**
  - Is supply water temperature less than 185°F (91°C)?
    - **YES**
      - Replace wire(s)
    - **NO**
      - Is High Temperature Supply Switch open (no continuity between terminals 1 and 3)?
        - **YES**
          - Replace High Temperature Supply Switch
        - **NO**
          - Measure resistance across High Temperature Supply Switch terminals 2 and 4? Does resistance match supply water temperature (see table)?
            - **YES**
              - Replace Control Module
            - **NO**
              - Replace High Temperature Supply Switch

- **NO**
  - Is High Temperature Supply Switch open (no continuity between terminals 1 and 3)?
    - **YES**
      - Replace High Temperature Supply Switch
    - **NO**
      - Replace Control Module

See Thermistor Resistance Chart - Page 63 of this manual
Inspect burner through sight glass. Is flame present?

NO

YES

Replace Flame Sensor or harness

Inspect harness connection. Is connection clean and secure?

NO

YES

Remove Flame Sensor. Is rod free of contamination?

Clean or replace Flame Sensor

Follow Operating Instructions to initiate boiler operation. Enter Installer Menu, Boiler Status, Flame Signal. Is flame signal greater than 3.7µA (Boiler may be running at any firing rate)?

NO

YES

Replace Control Module

Follow instructions TO TURN OFF GAS TO APPLIANCE. Replace Gas Valve.

Replace Control Module

Inspect burner through sight glass. Is flame present?

NO

YES

Turn off manual gas shutoff valve.

Replace Control Module

Follow instructions TO TURN OFF GAS TO APPLIANCE. Replace Gas Valve.

Read flue gas temperature on User Interface. Is temperature higher than 200°F?

- **YES**
  - Boiler is over fired. Wait for boiler to cool. Fix flow rate problem if any, purging all air out of the system.

- **NO**
  - Use thermal couple to measure flue gas temperature through sampling port. Is the measured temperature and flue temperature reading on User Interface significantly different?

- **YES**
  - Replace Flue Gas Sensor

- **NO**
  - Replace Control Module
### Blocking Error E 4 0

**Return Temp**

1. **Is correct harness connected to return sensor (2 Brown Wires)?**
   - **YES**
   - **NO**
     - Unplug molex connector on return sensor. Is there moisture or liquid on metal pins? Liquid might be water or antifreeze solution.
       - **YES**
       - **NO**
         - Remove all liquid from connector. Check for leaks. Repair all leaks.

2. **Is Primary Pump properly oriented?**
   - **YES**
   - **NO**
     - Disconnect harness from Return Water Sensor. Measure resistance using digital ohm meter. Is resistance between 950 to 33,000 ohms?
       - **YES**
       - **NO**
         - Replace Control Module
         - Replace Return Water Sensor

### Blocking Error E 4 4

**Phase error**

- **Measure incoming power with volt meter. Is terminal 120 VAC (L) approximately 120 VAC? Is 120 VAC (N) approximately 0 VAC?**
  - **YES**
  - **NO**
    - Correct power supply to Boiler

- **Verify order of pins on J2. Pin order should be: empty, black (or red), white, green. Measure volts on pins of black wire and white wire. Is wiring/pins in right order? Does black/wire have 120 VAC? Does white wire/pin have 0 VAC?**
  - **YES**
  - **NO**
    - Replace Control Module
    - Replace Wire Harness
These error messages are displayed when the control board detects fault in
blower motor system.
Check wire connector to blower.
Check connector J9 on control board.
Is any connection loose?

| YES | NO |
---|---|

Fix the connection.

Replace blower motor. Does this correct the problem?

| YES | NO |
---|---|

Boiler is operating properly

Replace Control Module
Is harness plugged into Supply Water Sensor?

Is harness plugged into Control Module J5?

Disconnect J5 from Control Module. Using digital meter measure check continuity of white wires between Control Board and Sensor. Continuity?

Replace Wires

Unplug J5 connector on Control board. Using digital meter measure resistance between terminals J5-11 and J5-3. Estimate Sensor temperature. Does it fall in the range of the Resistance Chart?

Replace Control Module

Replace Supply Water Sensor
Troubleshooting Guide:

- **Blocking Error E52**
  - Return Sens Open

  **Is harness plugged into Return Temperature Sensor?**
  **Is harness plugged into Control Module J5?**

**Glossary**

- **ANSI** - American National Standards Institute, Inc. oversees creation and maintenance of voluntary consensus standards, including ANSI Z21.13/CSA 4.9: Gas-Fired Low Pressure Steam and Hot Water Boilers.

- **ASTM** - American Society for Testing and Materials. ASTM International is one of largest voluntary standards development organizations in world trusted source for technical standards for materials, products, systems, and services. Known for their high technical quality and market relevancy, ASTM International standards have important role in information infrastructure that guides design, manufacturing and trade in the global economy.

- **AUTHORITY HAVING JURISDICTION** - Individual or organization adopting and enforcing codes, rules, and by-laws governing various concerns of community. Commonly referred to as "final authority" for any matters relating to LIFE SAFETY and BUILDING CONSTRUCTION within a community.

- **Btu** - Abbreviation for British Thermal Unit. Quantity of heat required to raise temperature of 1 pound of water 1°F.

- **BURNER** - Device for final conveyance of gas or mixture of gas and air, to combustion zone.

- **COMBUSTION** - Rapid oxidation of fuel gases accompanied by production of heat or heat and light. Complete combustion of fuel is possible only in presence of adequate supply of oxygen.

- **COMBUSTIBLE MATERIAL** - Materials made of or surfaced with wood, compressed paper, plant fibers, or other materials capable of being ignited and burned. Such material shall be considered combustible even though flame-proofed, fire-retardant treated, or plastered.

- **CONDENSATE** - Liquid separated from flue gas due to reduction in temperature.

- **DIRECT VENT BOILER** - Boiler constructed and installed so all combustion air is derived directly from outdoors and all vent gases are discharged to outdoors.

- **DRAFT** - Pressure difference causes gases or air to flow through a chimney, vent, flue or appliance.

- **FLA** - Full load amps.

- **FLUE GASES** - Products of combustion plus excess air in appliance flues or heat exchanger.

---

- **HIGH-VOLTAGE** - Circuit involving potential of not more than 600 volts and having circuit characteristics in excess of those of low-voltage circuit.

- **IGNITER** - Device utilizing electrical energy to ignite gas at main burner.

- **LEAK CHECK** - Operation performed on gas piping system to verify system does not leak.

- **LOW WATER CUTOFF** - Device constructed to automatically cut off fuel supply when surface of water in boiler falls to lowest safe water level.

- **LOW-VOLTAGE** - Circuit involving potential of not more than 30 volts.

- **METRIC GAS METERS**

  \[
  MBH = \frac{127,116 \times \text{cu meters}}{\text{Seconds}}
  \]

  For example: Gas Meter measures 0.1 cubic Meters in 100 seconds

  \[
  MBH = \frac{127,116 \times 0.1}{100} = 127 \text{ MBH}
  \]

- **PRESSURE TEST** - Operation performed to verify gas tight integrity of gas piping following its installation or modification.

- **PURGE** - To free gas conduit of air or gas, or mixture of gas and air.

- **PURGE TIME** - Period of time intended to allow for dissipation of any unburned gas or residual products of combustion.
• **QUALIFIED AGENCY** - Any individual, firm, corporation, or company engaged in and responsible for:
  
  - Installation, testing, or replacement of gas piping, or connection, installation, testing, repair or servicing of appliances and equipment.
  - Experienced in such work.
  - Familiar with all precautions required.
  - Complies with all requirements of authority having jurisdiction.

• **SAFETY RELIEF VALVE** - Valve designed to relieve pressure in hot water supply system when pressure exceeds pressure capability of equipment.

• **SAFETY SHUTOFF DEVICE** - Device that will shut off gas supply to controlled burner in event source of ignition fails.

• **SEDIMENT TRAP** - Gas piping arrangement designed to collect any liquid or solid contaminant before reaching gas valve.

• **VENT** - Passageway used to convey flue gases from appliance vent connector to outdoors.

• **VENTING SYSTEM** - Continuous open passageway from of appliance vent connector to outdoors for purpose of removing flue or vent gases.

#### User Menu (Press Menu button on user interface to access User Menu)

<table>
<thead>
<tr>
<th>User Menu</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| **User Menu** | User Menu structure includes:  
- ‘Boiler Status’ submenu – User can monitor general boiler status parameters such as sensor temperatures and pump operation.  
- ‘Settings’ submenu – User can view CH, adjust DHW supply water set points and also select control language.  
- ‘Cascade Status’ submenu – Boiler set to function as part of multiple boiler installation; submenu used to view runtime parameters. See Multiple Boiler Manual. (This line is not shown if boiler is not in cascade system). |

| Boiler Status | Supply Temperature set point displayed.  
If boiler running in CH mode, CH set point displayed.  
Note:  
- While running in Outdoor Reset mode, this value may change in proportion with the outdoor temperature.  
- If the boiler is running in DHW mode, the DHW supply set point is displayed.  
Several boiler runtime parameters can be viewed while in ‘Boiler Status’ submenu.  
Operational status of pump system also shown.  
Information available during all states of boiler operation. Sensor values with troubleshooting tree used to diagnose typical problems. |

| **BOILER STATUS** | Supply 140°F  
Return 120°F  
DHW Stat Open |  
**BOILER STATUS** | System N.C.

</tbody>
</table>
## Boiler Configuration

### User Interface Display

### Explanation

Two pump modes are available:

1. **Pump Mode = 0 'CH or CH&DHW’**
   - In this mode either CH or DHW pump terminal is energized depending on type of demand (CH or DHW).
   - CH and DHW pumps are never energized at the same time.
   - In the case of simultaneous call for both CH and DHW, the energized pump depends on whether the boiler is currently supplying CH or DHW demand. Refer to DHW Priority settings below.
   - This is typical of hydronic system design with separate CH and DHW Pumps.

2. **Pump Mode = 4 ‘System Pump’**
   - In this mode only one external system pump is installed in hydronic system. This pump will energize independent of type of demand (CH or DHW).
   - Connect this pump to CH/System Pump electrical terminal block. See page 35 for diagram.
   - DHW pump terminal does not function.
   - This is typical of hydronic system design which utilizes zone valves for all CH zones and DHW indirect tank.

**Note:**
- Pump Mode selection depends on electrical and hydronic system design. Please refer to sections 5 and 8 for recommended hydronic piping and electrical configurations.
- Internal heat exchanger pump is energized anytime demand exists regardless of Pump Mode setting or type of demand (CH or DHW).

---

'Service Reminder' feature allows the installer to enable or disable a service reminder notification on the User Interface at a predefined interval.

Service reminder does not affect operation of boiler in any way. It is only a reminder to End User that routine preventative maintenance is required by qualified service technician.

Allowed Range: 1 to 999 days
4. Central Heating (CH) modes available:

- **CH Mode = 0 'CH with Thermostat'**
  - Boiler will attempt to satisfy CH demand while CH thermostat input is closed.
  - Boiler will modulate its firing rate to maintain CH set point and match system heat load.
  - CH set point adjusted in ‘Settings’ submenu under ‘User Menu’

- **CH Mode = 1 'CH with Thermostat and Outdoor Reset’**
  - Boiler will attempt to satisfy CH demand when CH thermostat input is closed.
  - Boiler will modulate its firing rate to maintain CH set point and match system heat load.
  - CH set point calculated as function of outdoor temperature using outdoor reset curve. See figure A-2

- **CH Mode = 2 'CH with Full Outdoor Reset’**
  - CH demand is determined by outdoor temperature and Warm Weather Shutdown temperature.
  - Boiler will permanently attempt to satisfy CH demand, when CH demand is available.
  - CH thermostat input is ignored.
  - CH set point calculated as function of outdoor temperature using outdoor reset curve. See figure A-2

- **CH Mode = 3 'CH with Permanent Demand’**
  - CH demand is permanently on.
  - Boiler will permanently attempt to satisfy CH demand.
  - CH thermostat input is ignored.
  - CH set point is adjusted in ‘Settings’ submenu under ‘User Menu’

**Note:**
- Once CH demand is satisfied (i.e. CH thermostat opens or boiler determines its minimum firing rate exceeds system heating load):
  - Burner shuts off, boiler enters post purge.
  - CH pump continues to run for 30 seconds.
  - Control will wait until Anti-cycle time of 180 seconds elapses before boiler fires again. Prevents short-cycling.
- The internal heat exchanger pump is energized anytime demand exists regardless of Pump Mode setting or type of demand (CH or DHW).
### User Interface Display

**CH Settings**
- **Warm Weather Shutdown Temp**: 70°F (21°C)
- **Default Setting**: 70°F (21°C)

#### Allowed Range: 35°F to 100°F (2°C to 38°C)

If outdoor temperature is greater than Warm Weather Shutdown Temperature, demand for CH blocked and pumps stopped.

#### Default Setting: 100°F (37°C)

Boiler capable of operating in Outdoor Reset Mode when included Outdoor Sensor is connected and proper CH Mode selected.

If CH Mode = 1, 'Outdoor Temperature Reset with Thermostat' or 2, 'Full Outdoor Reset' boiler will adjust CH set point proportional to outdoor temperature as defined by Outdoor Reset Curve below.

Outdoor reset curve adjusted by modifying Design and Mild Weather reference temperatures. See points A & B of Reset Curve below.

Calculated CH set point always limited between 'Reset Curve Boiler Minimum/Maximum' temperatures. See points C & D of Reset Curve below.

#### Figure A-2 Outdoor Reset Curve
Calculated supply temperature follows thick black line in graph below based on outdoor temperature.

Note:
- Modes only function when outdoor temperature sensor connected.
- If 'Open' outdoor sensor detected CH set point equal to 'Boiler Reset Curve Design' temperature.
- Outdoor temperature used for CH set point calculation measured once a minute and averaged with previous measurement to compensate for rapid outdoor temperature variations.
### User Interface Display

| CH Settings | **Outdoor reset boost function** increases CH set point by increment ('Temp') if CH demand continues beyond pre-set time limit ('Time').
| CH set point will continue to increase until set point reaches 195°F / 91°C |
| CH set point will continue to increase until set point reaches 195°F / 91°C |
| Allowable Temperature Increment: 0..36 °F (0..20 °C) |
| Default Temperature increment: 0 °F (10 °C) |
| Allowable Time Delay: 1..120 minutes |
| Default Time Delay: 20 minutes |

| CH Settings | Maximum boiler power in CH mode limited by adjusting 'Maximum Power CH' setting. Boiler will not exceed this value while operating in CH Mode. |
| Allowable Range: 1..100% |
| Default Setting: 100% |

| DHW Settings | Two DHW modes are available
| **DHW Mode = 0** 'No DHW'
| - DHW Mode is disabled
| - The DHW thermostat input is ignored and the DHW pump is not used.
| **DHW Mode = 2** 'DHW Store with Thermostat'
| - Boiler reacts to DHW demand when DHW thermostat input closes.
| - Boiler modulates to meet DHW demand similar to CH Mode except DHW set point is used. DHW set point set in Settings’ submenu found in 'User Menu'.
| - Simultaneous CH & DHW demands handled using DHW Priority Timing. See 'DHW Maximum Priority Time' setting below.

#### Note:
- Outdoor reset function disabled while operating in DHW Mode.
- Typical when using a DHW indirect storage tank.
- After DHW demand satisfied, boiler enters post purge mode and DHW pump continues to run for 15 seconds.
## User Interface Display

### DHW Settings

<table>
<thead>
<tr>
<th>Display</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| ![DHW Settings](image) | Maximum time boiler operates in DHW mode limited by DHW Maximum Priority Time Setting.  
Priority timer starts when both CH and DHW demand is present. Boiler will switch from DHW back to CH operation after Maximum Priority Time has elapsed.  
CH demand then has priority until Maximum Priority Time has elapsed.  
Process repeats until either CH or DHW demand satisfied. |

Allowed Range: 1 to 60 Minutes  
Default Setting: 30 Minutes

### System Test

<table>
<thead>
<tr>
<th>Display</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| ![System Test](image) | System test can be activated via installer menu for testing system at fixed power rates.  
Boiler can be started without CH or DHW demand being present. System Test has priority over any system demand while test mode activated.  
System test mode automatically ends after 30 minutes boiler resumes normal operation.  
The following modes are available: |

- Disabled  
- Low power - Burner starts. After ignition period has finished the burner stays at low power  
- Ignition power - Burner starts. Stays at ignition power  
- High power - Burner starts. After ignition period has finished burner stays at high power. |

**Note:**  
- Before running system test modes, check if hydronic system capable of dissipating heat.  
- Both heat exchanger and CH pumps are activated during system test.  
- During System Test Mode, boiler will run at fixed power rates until supply water temperature is 93°C/195°F  
- All other safety functions remain active while in System Test Mode. |
User interface can be easily relocated outside of the boiler.

1. Follow instructions TO TURN OFF GAS TO APPLIANCE found on page 42. Verify all electrical power to boiler is turned off.

**WARNING**

Electrical shock hazard. Turn OFF electrical power supply at service panel.

2. Remove front jacket panel.

**WARNING**

Burn hazard. Verify heat exchanger, igniter, and flame sensor have cooled or use appropriate personal protection equipment before removing.

3. Inspect combustion chamber through sight glass. Verify flame is not present. See figure 11.1 page 43.

4. Disconnect the two position Molex connector between main boiler harness and user interface. See figure A.

5. Use small screwdriver to push in the plastic clip on bottom of user interface. Pull outward on bottom of user interface to release it from its base.

6. Use small flat blade screwdriver to disconnect the two wire harness from the terminal block located in user interface base. Disconnect other end of harness at 2 pin connector. Secure unused connector to harness bundle with wire tie. This harness will not be required when mounting user interface outside of boiler.

7. Before installing user interface in new location, route new two conductor wire through hole in back of user interface base. Connect the wires to terminal block. This connection is not polarity sensitive.

8. Install user interface base in new location using appropriate field sourced screws.

9. Install user interface on the base by engaging upper tabs on rear into user interface base slots. With downward hinging motion lower the display until user interface snaps onto the base. Verify two pins on back of user interface are properly aligned with the holes in user interface base terminal block as user interface is installed.

10. Route other end of new two conductor wire through low voltage knockout on boiler.

11. Connect two conductor wire to low voltage terminal block terminals labeled user interface. This connection is not polarity sensitive.

12. Replace front jacket panel.

13. Apply power and verify proper operation of the display following instructions in Appendix A - Control Module.

14. Verify proper boiler operation by following START UP PROCEDURE located in this manual.
## 50/75/100 MBH - PRIMARY LOOP EQUIVALENT LENGTH CALCULATION & PUMP SELECTION

**For 50/75/100 MBH Boilers**

(This boiler must be piped with a primary loop)

*These charts are valid for piping diagrams on pages 17 & 18*

**Instructions:**

1. Pipe diameter determines pump size. Smaller the diameter of pipe, larger the pump. 50/75/100 Mbh boilers can be piped in 3/4", 1" or 1¼" pipe. Use charts 1-4 to determine pipe size and respective pump size.

2. Fill in chart using the 3/4" section first. Then consult chart 4 for pump selection.

3. Pump size may be decreased by decreasing equivalent length of pipe. Use larger diameter pipe as primary loop to decrease equivalent length. Use chart 2 or 3.

Note: The figures below are based on industry average. Consult valve/fitting manufacturer for exact equivalent length or for fittings not shown below.

### Chart 1

<table>

**Note:** If the heating system uses antifreeze solution 30% or higher, choose the next larger size pump listed in this table.
IMPORTANT

In accordance with Section 325 (f) (3) of the Energy Policy and Conservation Act, this boiler is equipped with a feature that saves energy by reducing the boiler water temperature as the heating load decreases. This feature is equipped with an override which is provided primarily to permit the use of an external energy management system that serves the same function.

THIS OVERRIDE MUST NOT BE USED UNLESS AT LEAST ONE OF THE FOLLOWING CONDITIONS IS TRUE:

• An external energy management system is installed that reduces the boiler water temperature as the heating load decreases.
• This boiler is not used for any space heating
• This boiler is part of a modular or multiple boiler system having a total input of 300,000 BTU/hr or greater.
• This boiler is equipped with a tankless coil.
