APPLICATION:
Modulating Gas fired water boiler for indoor installation. Approved for closet or alcove installations. For use with natural or liquefied petroleum (LP/Propane) fuel gases. Boiler shall be floor standing. All boilers are factory assembled with controls and wiring and test fired to ensure dependable performance. Boiler shall be certified for Direct Vent applications only.

CERTIFICATION AND APPROVALS:
Stainless Steel heat exchanger is manufactured and tested in accordance with American Society of Mechanical Engineers (ASME) and certified by Canadian Standards Association (CSA), AHRI, NRCAN. Registered with National Board BPVI, and Massachusetts Board. Stainless steel heat exchanger is tested for maximum allowable working pressure of 50 psig in accordance with ASME boiler and pressure vessel code, section IV, rules for construction of heating boilers. A 30 psig safety relief valve is shipped standard.

BOILERS INCLUDE:
- Boiler includes factory installed and wired, electronically controlled, 2 step modulating circulator pump. The circulator RPM is determined by the boiler temperature and controlled by the integrated boiler control.
- Primary/Secondary manifold with quick connections installed on the boiler.
- Digital Boiler Control:
  - Control is Self Commissioning, auto adjusts to fuel type and features a calibration function mode to optimize combustion. Control continuously monitors flame signal and adjusts the gas valve during normal operation for maximum efficiency.
  - Control system is PCB integral controller with LCD digital/graphical display.
  - Control can sense and display water temperature and indicate when boiler is in central heating or domestic water mode.
  - Control can accept an optional Outdoor Air sensor and has field adjustable reset curves.
  - Control displays Error Codes and Diagnostic information.
  - Control can accept 0-10V input to manage heating set-point or heating power level.
• **Boiler Combustion System:**
  - The Gas valve is a modulating valve capable of firing from 164,000 BTU input down to 29,500 BTU input in Heat mode (5.5:1 turn down).
  - Induced draft blower is variable speed controlled by the PCB.
  - Burner is constructed of Iron-Chromium stainless steel.
  - Ignition system shall incorporate a Direct Spark Igniter and a separate Flame Sensing rod.

• **Heat Exchanger:**
  - Boiler’s primary heat exchanger is constructed of Iron-Chromium stainless steel.

• **Electrical**
  - 120 volts AC, 60 Hertz, 1-phase; less than 15 amps.
  - Low voltage terminal strip for Thermostat, Outdoor Air Sensor, Indirect Tank sensor.

• **Warranty**
  - Factory Standard Limited Warranty is 10 years on heat exchanger, one year on parts.
  - Please see the Limited Warranty for More Detail on Warranty Registrations & Extensions.

• **Optional Equipment**
  - Outdoor Air Sensor Kit
  - Indirect Tank Sensor Kit
  - Coaxial and Two-pipe venting components

---

(1) 1000 Btu/hr (British Thermal Units Per Hour)
(2) Heating Capacity and AFUE (Annual Fuel Utilization Efficiency) are based on DOE (Department of Energy) test procedures.
(3) Net AHRI Ratings based on piping and pickup allowance of 1.15. Contact Technical Support before selecting boiler for installations having unusual piping and pickup requirements, such as intermittent system operation, extensive piping systems, etc.

*Max CH Supply temp 176° F (80°C) for DCBF165 *Max DHW temp 140° F (60° C)

Venting

Coaxial Venting
Connects directly to the top of the boiler

2-Pipe Venting - Optional Kit
Using polypropylene - 80 mm venting

2-Pipe Venting - Optional Kit
Using CPVC UL1738/S626 - 3” / 80 mm venting
